Experience

Software Engineering Intern | EPSoft Solutions Pvt Ltd | Hyderabad, India Jan 2023 – Dec 2023

- Built backend APIs with **Java**, **Spring Boot**, and **PostgreSQL**, supporting enterprise-scale growth while streamlining new feature deployment across multiple projects.
- Automated **ETL workflows** on **AWS RDS**, cutting daily data processing time by **20%**, accelerating analytics delivery, and enabling faster business insights.
- Deployed backend services on **AWS EC2 & S3**, attaining **99.9% uptime**, seamless failover during peak traffic, and stronger SLA compliance while minimizing downtime.

Full Stack Developer | Fobet | Delhi, India Aug 2022 – Dec 2022

- Developed backend microservices with **Java**, **Spring Boot**, and **MySQL**, building RESTful APIs that powered scalable workflows and enhanced responsiveness across applications.
- Implemented interactive dashboards by connecting **React.js** components with REST APIs, elevating user experience, improving visualization, and simplifying business reporting.
- Containerized applications with **Docker** on **AWS EC2**, strengthening scalability under heavy loads and streamlining release cycles through CI/CD automation.

Projects

Intelligent Job Recommendation System Backend **Java, Spring Boot, MySQL, AWS EC2**

- Architected a scalable backend system with **RESTful APIs** and an **ML-driven recommendation engine**, boosting job matching accuracy and cutting response latency by **35%**, hosted on **AWS EC2** for high availability.
- Tuned **MySQL queries** and indexing to accelerate response times, enabling faster retrieval of **candidate-job** matches and trimming query execution by **25%**.
- Incorporated authentication, error handling, and logging to guarantee secure, reliable API access across enterprise applications.

Customer Churn Prediction Platform **Python, scikit-learn, Pandas, SQL, Flask, AWS S3**

- Built a churn prediction pipeline achieving **92% accuracy** using advanced **feature engineering** and **hyperparameter optimization** on structured SQL datasets.
- Deployed the trained model as a **Flask API** integrated with **AWS S3**, delivering real-time insights, interactive dashboards, and seamless integration into existing workflows.
- Automated preprocessing and retraining pipelines, ensuring continuous adaptability to evolving customer behavior patterns.

Real-Time IoT Sensor Data Pipeline **Python, Kafka, AWS Kinesis, PostgreSQL**

- Developed a distributed data streaming pipeline leveraging **Kafka** and **AWS Kinesis** to handle sensor data from **500+ IoT devices**, ensuring fault tolerance and low-latency data flows.
- Streamlined ingestion-to-visualization pipelines, cutting end-to-end latency to under **5 seconds**, empowering the mission-critical monitoring dashboards and predictive maintenance systems.
- Designed a **PostgreSQL-backed** data warehouse for structured storage, supporting anomaly detection, periodic reports, and stakeholder-facing analytics dashboards.

Technical Skills

Languages: Java, Python, C++, SQL, JavaScript, TypeScript

Frameworks/Libraries: Spring Boot, Flask, React.js, scikit-learn, Pandas, NumPy, PyTorch, TensorFlow

Databases: MySQL, PostgreSQL, AWS RDS

Cloud/DevOps: AWS (EC2, S3, RDS, Glue, Kinesis, CloudWatch), Docker, CI/CD, Kafka

Other: JWT Authentication, Agile/Scrum

Education

Master of Science, Computer Science | University of Florida | Gainesville, FL | CGPA - 3.60 Dec 2025

- Relevant Coursework: Advanced Data Structures, Software Engineering, Data Engineering, Distributed Operating System, Programming Language Principles. CGPA - 3.60

Bachelor of Technology, Computer Science | Bennett University | Delhi, India May 2024
