

SUMMARY

Data Analyst with 6+ years of experience in data analysis, reporting, and business intelligence across healthcare and enterprise clients. Skilled in SQL, Python, Tableau, Power BI, and cloud-based data warehousing with strong focus on data quality, compliance, and actionable insights. Experienced in end-to-end data lifecycle: extraction, modeling, transformation, visualization, and stakeholder reporting. Adept at working with cross-functional teams in Agile environments to deliver data-driven solutions aligned with business requirements and KPIs.

TECHNICAL SKILLS

- **Programming & Analysis:** Python (Pandas, NumPy, Matplotlib, Seaborn, SciPy, Scikit-learn), R, SQL, SAS
- **Databases:** SQL Server, MySQL, PostgreSQL, Oracle, Snowflake
- **Data Warehousing & ETL:** SSIS, Informatica, dbt, Airflow, Azure Data Factory, AWS Glue
- **Visualization & BI:** Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP, HLOOKUP, Macros), Data Storytelling
- **Cloud Platforms:** AWS (Redshift, S3, Lambda), Azure (Synapse, Data Lake), GCP (BigQuery, Dataflow)
- **Other:** Data Modeling, ERD Design, KPI Tracking, A/B Testing, Statistical Modeling, Data Governance (HIPAA, GDPR compliance), Git, CI/CD Workflow Integration

EXPERIENCE

Promise Healthcare

Sep 2023 – Present

Data Analyst

- Built and optimized SQL and Snowflake queries to improve patient data reporting, reducing report generation time by 35%.
- Developed interactive Tableau dashboards for clinical and operational KPIs, enabling executives to make data-driven decisions more quickly.
- Automated Python-based data cleaning pipelines, lowering manual corrections and ensuring higher regulatory reporting accuracy.
- Designed HIPAA-compliant workflows to ensure data privacy and governance across patient datasets.
- Migrated legacy reporting to AWS Redshift, improving scalability and enabling self-service analytics for business users; partnered with stakeholders to gather business requirements and deliver tailored dashboards that aligned with strategic goals.

Fortis Health

Jan 2020 - Jul 2022

Data Analyst

- Consolidated datasets using Azure Synapse and SQL Server, cutting query execution time by 30% and improving clinical reporting.
- Conducted hypothesis testing, regression analysis, and A/B testing to measure patient engagement strategies, increasing retention by 15%.
- Designed Power BI dashboards with drill-through reports and KPI scorecards, providing actionable insights to leadership; built automated ETL workflows (Azure Data Factory, SSIS) to integrate hospital systems into a centralized reporting platform.
- Collaborated with business and compliance teams to align analytics processes with HIPAA regulations.
- Applied data modeling and ERD design to standardize schema across reporting systems, improving consistency and data governance.

IBM

Aug 2017 – Dec 2019

Data Analyst

- Created data pipelines in SQL and Python to improve reporting availability, reducing turnaround time by 35%.
- Developed and maintained interactive Tableau and Power BI dashboards, delivering data storytelling and trend analysis for stakeholders.
- Supported migration of enterprise data solutions to AWS Redshift, enhancing performance for large-scale reporting.
- Automated data validation and transformation using VBA macros and SQL stored procedures, reducing errors and improving CI/CD integration of reports; partnered with cross-functional teams to define KPIs, business requirements, and reporting metrics, ensuring alignment with organizational goals.
- Participated in Agile ceremonies, collaborating with developers, QA, and business analysts to deliver analytics solutions iteratively.

EDUCATION

- MBA in Business Analytics, New York Institute of Technology, New York, USA
