

TIRUMALA VASU
Java Full Stack Developer
Email: vasugarikapati0809@gmail.com
Ph. No: 203-715-2817

SUMMARY:

- Around 5+ years of experience as a Java Full Stack Developer in the IT industry. Extensive experience in Software Analysis, Design, Development, Implementation, and Testing of Object-Oriented Applications and Web based Enterprise Applications using Java/J2EE.
- Proficient in Java 8/11/17 and J2EE, leveraging them to design and implement efficient solutions for complex business problems.
- Demonstrated expertise in utilizing J2EE technologies such as Servlets, JSP, JSTL, JMS, JDBC, JNDI, JAXB, JTA, EJB, and JSF to build sophisticated, high-performance applications.
- Proven experience with frameworks like Struts, Hibernate, and Spring (SpringBoot, Spring MVC, Spring Data JPA, Spring Security), enabling rapid development and streamlined code maintenance.
- Skilled in working with diverse databases, including Oracle, MySQL, SQL Server, PostgreSQL, MongoDB, Cassandra, and DynamoDB, ensuring efficient data storage and retrieval.
- Proficient in developing RESTful and SOAP web services, facilitating seamless communication between applications and enhancing interoperability.
- Expertise in a wide array of web technologies, including HTML5, CSS3, JavaScript, Typescript, React (16.x/17), Angular (9/10/11), Angular CLI (9/10/11), NodeJS, JSON, AJAX, XML, React Native, Material-UI, and Redux.
- Well-versed in deploying applications on Azure and AWS, harnessing the power of cloud platforms to ensure scalability, availability, and efficient resource management.
- Proficient in utilizing DevOps tools like Jenkins, Azure DevOps, Docker, and Kubernetes to automate the deployment pipeline and ensure smooth release cycles.
- Experience in integrating applications with messaging platforms Apache Kafka, ActiveMQ, and RabbitMQ.
- Proficient in using Amazon Web Services (AWS). Experience focusing on services like EC2, Elastic Beanstalk, Cloud Watch, Cloud Front, Cloud Formation, IAM, S3, RDS, Elastic Cache, SNS, SQS.
- Hands-on experience in AWS infrastructure on various resources IAM, EBS, Security Group, and Auto Scaling in Cloud Formation JSON templates and some internet technologies including TCP/IP and HTTP
- Experience in creating Docker container images, pushing images, and integration of Spring Boot.
- Hands-on experience working with Kubernetes to manage related, distributed cluster components.
- Experience in building CI/CD pipelines using Jenkins, Team City, bamboo, etc.
- Expertise in using AWS CLI for managing and automating AWS resources and services.
- Experience in using JAVA/J2EE technologies like JSP, Servlets, JPA, JMS, JDBC, JAX-WS, JAX-RS, etc.
- Experience in database modeling, design, and development of PL/SQL stored procedures, and packages in relational databases: Oracle11g/12c/19c, SQL Server, DB2, Postgre SQL, and My SQL.
- Experience in Infrastructure, Security, Service and Operations including IaaS, SaaS, PaaS migration experience on Services, Storage Solutions, Cloud Architecting, Networks.
- Experience in working with No SQL databases like Mongo DB, Cassandra.
- Experienced in implementing messaging systems using JMS, Kafka, and RabbitMQ, ensuring reliable communication between distributed components.
- Skilled in configuring and managing web and application servers like Nginx, JBoss, Apache, and Tomcat, optimizing application performance and stability.
- Proficient in using Git, GitHub, and Bitbucket for version control and collaborative development, ensuring code quality and teamwork.
- Expertise in testing tools such as JUnit, Jasmine, Karma, Selenium, Mockito, SOAP UI, and Postman, guaranteeing the reliability and functionality of applications.
- Skilled in using monitoring and logging tools such as Splunk, Log4J, and Amazon CloudWatch to track application performance and diagnose issues.
- Well-versed in Agile methodologies, including Scrum, Kanban, and Waterfall, with experience utilizing tools like Jira for project management and Jasper Reports for reporting.

TECHNICAL SKILLS:

Programming Languages	J2EE, Java11/ 8, J2EE, Python3.6.0, PL/SQL2.3/2.1
Framework	Struts 1.x/2.x, Spring Core, Spring MVC, Spring Security, Spring Boot2.71, Spring Batch, Spring ORM.
Web Technologies /Web Services	XML, HTML5, CSS3/4, JSON, SOAP, WSDL, JAX-WS and REST, JAX-RS, Angular14/8/6/4/2, Reactjs.
Web/ App Servers	Nginx, JBoss, Apache, Tomcat
DevOps Tools	Jenkins, Azure DevOps, Docker, Kubernetes
IDEs	Eclipse and IntelliJ 17.
Design Skills	Object-oriented Analysis and Design (OOAD) and UML
AWS	EC2, RDS, S3, ELB, EBS.
Version Control	Git, SVN, BIT BUCKET.
Build & deploy CI/CD Tools	Maven3.0, Jenkins, Docker, and Kubernetes
Testing Tools	JUnit, Jasmine, Karma, Selenium, Mockito, SOAP UI, Postman
Methodologies	Scrum Agile and Scrum Ban
RDBMS / NoSQL	ORACLE 11g/12c/19c, MS-Access, MySQL, SQL-Server, DB2, MongoDB

PROFESSIONAL EXPERIENCE:**Client:** Assurant**Jan 2025 – Present****Role:** Java Full Stack Developer**Responsibilities:**

- Designed and implemented highly scalable microservices using Spring Boot 3 and Java 21, adhering to 12-factor app principles and domain-driven design (DDD) patterns.
- Built modern, dynamic, and reusable UI components using Angular 17, RxJS, and Material Design, focused on digital self-service and customer onboarding.
- Integrated Apache Kafka for handling real-time claim events such as policy submission, fraud scoring, and escalation alerts.
- Developed asynchronous REST and GraphQL APIs for adjusters, underwriters, and customer portals with strict versioning and contract testing.
- Migrated legacy systems to a GCP-based cloud-native architecture, leveraging services such as Pub/Sub, Cloud Run, Firestore, and GKE.
- Enabled role-based access and secure authentication using OAuth2/OpenID Connect via Okta for internal and customer-facing apps.
- Collaborated with product managers and UX teams to implement business logic into front-end forms, dashboards, and multi-step workflows.
- Created CI/CD pipelines using GitHub Actions, integrated with SonarQube, Docker Hub, and Terraform for infrastructure provisioning.
- Implemented real-time validation rules using Drools Rule Engine for claim decisions and AI/ML integrations.
- Built log aggregation and distributed tracing using ELK Stack (Elasticsearch, Logstash, Kibana) and OpenTelemetry.
- Developed unit, integration, and component tests using JUnit 5, Mockito, Cypress, and Rest Assured with over 90% coverage.
- Containerized services using Docker, managed deployments via Helm charts on GKE, and ensured blue-green releases.
- Set up feature flags using LaunchDarkly to support progressive delivery and safe experimentation.
- Supported mobile app integration and customer experience journeys through public-facing APIs with strict SLA monitoring.
- Participated in bi-weekly sprint demos, backlog refinement, and technical grooming as part of a SAFe Agile team.

Environment: Java 21, Spring Boot 3, Angular 17, Kafka, GraphQL, GCP (GKE, Pub/Sub, Firestore), Docker, Kubernetes, GitHub Actions, OAuth2, MongoDB, PostgreSQL, Cypress, JUnit 5, ELK, Terraform, LaunchDarkly.

Client: Arkansas Blue Cross Blue Shield**Feb 2024 – Dec 2024****Role:** Java Full Stack Developer**Responsibilities:**

- Led development of RESTful APIs using Spring Boot 3 for managing member profiles, policy details, claims, and provider search integrated with backend EHR and eligibility systems.
- Developed dynamic and mobile-responsive UI in Angular 16 using RxJS and NGXS for state management, with an emphasis on ADA accessibility and HIPAA compliance.
- Integrated with third-party providers using HL7/FHIR standards to fetch member health records, lab results, and virtual care appointments through secured endpoints.
- Implemented SSO and multi-factor authentication (MFA) using Azure B2C and OpenID Connect to protect member data and support regulatory compliance.
- Used Azure Kubernetes Service (AKS) for container orchestration, including auto-scaling and blue-green deployments managed via Helm.
- Built microservices following event-driven patterns, using Azure Service Bus for decoupled communication and eventual consistency in billing and claims systems.
- Created reusable UI widgets such as digital ID cards, premium calculators, and provider lookup integrated with real-time backend data feeds.
- Worked with PostgreSQL and Elasticsearch to implement full-text search and analytics dashboards showing claims status, EOB (Explanation of Benefits), and care summaries.
- Configured Azure DevOps pipelines for continuous integration, code quality checks using SonarQube, and artifact deployment to AKS and Azure Blob.
- Participated in API governance and designed contract-first APIs with OpenAPI 3.0 and Swagger for easy onboarding and documentation.
- Improved page load performance by introducing lazy loading in Angular modules, caching with Redis, and reducing unnecessary backend calls.
- Wrote BDD-style test cases using Cucumber for UI workflows and automated UI tests using Playwright for cross-browser compatibility.
- Led grooming sessions, story point estimation, and sprint retrospectives, contributing to improved velocity and sprint success rate.
- Collaborated with cybersecurity teams to implement data masking, audit logging, and incident response policies in accordance with Blue Cross Blue Shield standards.
- Created onboarding guides, code walk-throughs, and mentoring sessions to help new team members get up to speed on Angular, Spring Boot, and CI/CD practices.

Environment: Java 17, Spring Boot 3, Angular 16, Azure DevOps, AKS, Redis, PostgreSQL, Elasticsearch, Azure Service Bus, Azure B2C, OAuth2, FHIR, Docker, Helm, Playwright, JIRA, Swagger/OpenAPI.

Client: Fujiyama Software Solutions Pvt Ltd, India

Sep 2022 – Dec 2023

Role: Jr. Java Developer

Responsibilities:

- Developed key modules for the customer-facing web portal using Angular 13, implementing responsive layouts and reusable UI components aligned with Material Design standards.
- Consumed RESTful APIs securely through Angular services and observables, handling asynchronous operations and error states using RxJS.
- Built REST APIs and backend logic using Spring Boot, handling user requests, session management, and ticket tracking workflows.
- Applied Spring Security to secure backend APIs and configured role-based access controls across different user roles within the system.
- Worked with JPA and Hibernate for data persistence, defining entities, relationships, and performing CRUD operations with PostgreSQL.
- Developed and containerized microservices using Docker, enabling consistent deployment and environment replication across dev and QA.
- Implemented CI/CD pipelines using Jenkins to automate code integration, testing, and deployment to Azure Kubernetes Service (AKS).
- Integrated contact center capabilities using Genesys Cloud APIs, enabling call logging, agent routing, and real-time notifications in the portal.

- Collaborated with the DevOps team to configure Azure API Gateway, manage SSL certificates, and handle service routing to backend microservices.
- Set up and monitored centralized logging using the ELK stack (Elasticsearch, Logstash, Kibana) to troubleshoot issues and visualize system performance.
- Contributed to system design documentation and Swagger-based API contracts to ensure clear communication between backend and frontend teams.
- Conducted unit testing using JUnit and Mockito and participated in bug fixing, performance tuning, and code refactoring to improve code quality.
- Actively participated in sprint planning, retrospectives, and backlog grooming sessions to align with Agile delivery goals.
- Worked closely with UI/UX designers to review mockups and implement responsive, cross-browser-compatible designs.
- Used Git for version control and JIRA for task tracking, regularly committing code and updating progress on assigned tickets.

Environment: Java 11, Spring Boot, Angular 13, REST APIs, PostgreSQL, Hibernate, Docker, Jenkins, Azure (AKS, API Gateway), Genesys Cloud, JUnit, Mockito, Git, JIRA, ELK Stack (Elastic, Logstash, Kibana)

Client: Excelsoft Technologies Pvt Ltd, Hyderabad, India

Jan 2020 – Aug 2022

Role: Software Developer

Responsibilities:

- Implement Agile approaches and participated actively in technical meetings, requirement collecting, analysis, planning, effort estimating, coding, development, and testing.
- Implemented UI rich web applications with HTML5, CSS3, Bootstrap, Angular, used reactive template-driven forms to associate HTML5 elements to model & provide dynamic user validations on the client side.
- Used two-way data binding features of Angular 4 to implement Data binding to bind server controls to data.
- Used Java 8 features like parallel streams & filters through lambda expressions to handle searching.
- Used Spring Boot, to build cloud Microservices, developed Spring application with very less configuration.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular.
- Designed and developed the REST based Microservices using the Spring Boot, Spring Data with JPA.
- Developed Microservices to provide Restful API utilizing Spring Boot with various data persistence frameworks such as Hibernate, JPA and messaging engines.
- Developed a modern application using n-tier J2EE application server, spring framework, Hibernate.
- Used a Microservice with Spring Boot-based services interacting through REST and Apache Kafka.
- Deployed Spring Boot based Microservices Docker container using Amazon EC2 container services.
- Created Stacks using Amazon Cloud Formation templates to launch AWS Infrastructure and resources.
- Involved in Integration of Amazon Web Services (AWS) with other applications infrastructure.
- Developed Spring resources for various HTTP methods, to send data in JSON format to web interface.
- Worked on AWS, High Availability Practices and deploying backup/restore infrastructure.
- Created Collections and documents and performed CRUD operations with Mongo repositories.
- Used Docker to provide virtualized deployment containers and push the code to EC2 cloud using PCF.
- Created a CI/CD pipeline using Maven, Jenkins, Ansible, Docker and AWS container service.
- Involved in unit testing of various modules by generating test cases using Jest and Enzyme.
- Involved in writing JUNIT test cases and day to day builds and deployments using MAVEN and Jenkins.
- Written variety of filter queries in Mongo DB to retrieve JSON data and passed to service layer.

Environment: Java 1.8, Spring Boot, Microservices, AWS, EC2, S3, Docker, Bootstrap, Hibernate, Agile, WebSphere, Oracle, Eclipse, HTML5, CSS3, AJAX, Git, Node JS, Maven, Jenkins, Mongo DB, Rest, JUnit.
