PROFESSIONAL SUMMARY

- 6+ years of experience in designing, developing, and deploying enterprise-grade web applications across finance, insurance, manufacturing, and consulting domains.
- Strong expertise in backend development using **Java 8/11, Spring Boot, Spring Security, Spring MVC, JPA, Hibernate, and Spring Batch**.
- Proficient in building and integrating **RESTful** and **SOAP** web services for secure, scalable system communication across distributed architectures.
- Hands-on experience in developing responsive UIs using **ReactJS, Redux, JSP, JavaScript, jQuery, HTML5, and CSS3**.
- Experienced in implementing secure authentication and authorization mechanisms using **OAuth 2.0, JWT, and role-based access control**.
- Constructed CI/CD pipelines using **Jenkins, Azure DevOps, GitLab, and Docker**, streamlining deployments and reducing release time.
- Skilled in working with relational and NoSQL databases including **Oracle 10g/11g/12c, Aurora PostgreSQL, MongoDB, and DB2**.
- Familiar with **Terraform, AWS (EC2, S3, RDS, CloudWatch, Route53)**, and infrastructure automation for cloud-native applications.
- Applied **TDD/BDD** practices using **JUnit, Mockito, Selenium, and SonarQube**, improving test coverage and code quality.
- Experienced in Agile methodologies (Scrum and SAFe), with active participation in sprint planning, reviews, retrospectives, and mentoring.

TECHNICAL SKILLS

Category	Technologies
Languages	Java 8/11, SQL, PL/SQL, JavaScript, TypeScript, Shell Script, Python, Scala
Frameworks & Tools	Spring Boot, Spring MVC, Spring Security, Spring Batch, Spring Data JPA, Hibernate, Struts, JSP, JSTL, ReactJS 18, Redux, Node.js, GraphQL, Apache Ant, Maven, Gradle, Webpack, Spring Cloud, Micronaut, Pandas, NumPy
Enterprise Java	JSP, Servlets, JDBC 2.0/3.0, JMS, JNDI, EJB 3.0, Message-Driven Beans (MDB)
Web Technologies	HTML5, XHTML, CSS3, SCSS, JavaScript, TypeScript, Angular, React, jQuery, XML/XAML, Bootstrap, AJAX, Tailwind CSS, Material UI
Web Services	RESTful APIs, SOAP Web Services, GraphQL, JAX-RS, JAX-WS, Apache CXF, gRPC, OpenAPI (Swagger)
Markup/XML Tech	XML, XSL, XSLT, SAX, JSON, XPath, XLink
Cloud Platforms	AWS (EC2, Lambda, S3, API Gateway, Route 53, IAM, CloudWatch, CloudFormation, RDS, Auto Scaling, EBS, CloudFront, SQS), Azure (App Services, Blob Storage, API Management, Azure DevOps, Application Insights, Synapse Analytics), Google Cloud Platform (GCP), Pivotal Cloud Foundry (PCF)
CI/CD & DevOps	Jenkins, Docker, Kubernetes, Git, GitHub, Bitbucket, GitLab, AWS CodePipeline, SonarQube, Shell Scripting, Azure DevOps, Argo CD, Helm
Testing	JUnit, Mockito, PowerMock, TestNG, Cucumber,

	Selenium, Mocha, Jasmine, Protractor, Karma, PyTest, Postman
Databases	Oracle 11g/12c, PostgreSQL, MySQL, MongoDB, Cassandra, Amazon RDS, SQL Server 2016, IBM DB2, PL/SQL, Snowflake, Redis, Elasticsearch
Application Servers	Tomcat, WebLogic, JBoss, Nginx, IBM WebSphere
Version Control	Git, Bitbucket, CVS, Tortoise SVN, SourceTree
Operating Systems	Linux, Unix, Windows (7/10/11), MacOS
IDEs & Tools	IntelliJ IDEA, Eclipse, Visual Studio Code, NetBeans, IBM WebSphere Rational Architect, WinSCP, PuTTY, VMWare, MS Office, Swagger, Confluence, JIRA, Splunk, Zipkin, Grafana, Prometheus, ELK Stack
Big Data & Streaming	Apache Spark, PySpark, Apache Kafka (self-managed & AWS MSK)

PROFESSIONAL EXPERIENCE

Client: Morgan Stanley, TX
Role: Senior Full Stack Developer

Oct 2024 – Present

Project Overview:

Led the modernization of a secure, **microservices-based** application ecosystem used for managing internal transactions and partner data workflows. Designed and implemented backend services with a strong focus on security, reliability, and automation, aligning with Morgan Stanley's enterprise-grade standards for financial systems. **Enhanced** front-end capabilities with **Angular** and **ReactJS** and **integrated Apache Kafka** for event-driven messaging.

Key Responsibilities:

- **Led** the development of **Spring Boot**-based **microservices**, using **Spring MVC**, **Spring Security**, and **Spring Transactions** to build secure and maintainable **REST APIs** for internal and partner-facing modules.
- **Executed OAuth 2.0** authentication flows, securing service endpoints and enabling safe access to external APIs as part of Combined financial services.
- **Built** batch-processing workflows using **Spring Batch** to efficiently process large data volumes from upstream systems, improving throughput and ensuring data integrity.
- **Applied Core Java** concepts such as collections, exception handling, I/O streams, and generics to design performant logic for real-time transactional operations.
- **Integrated Hibernate** with **JPA** to persist domain entities in **Oracle 11g**, **Aurora PostgreSQL**, and **DB2**, including optimization of indexes, transaction isolation, and schema design for high-volume data use.
- **Developed** infrastructure automation scripts using **Terraform**, enabling reproducible and scalable **AWS** provisioning across **EC2**, **S3**, **ELB**, and **RDS**.
- **Reduced** deployment time by 40% by **containerizing** services with **Docker** and **building** CI/CD pipelines with **Jenkins**, **Bitbucket**, and **Amazon CloudWatch** for real-time monitoring and alerting.
- **Engineered** backend service interaction layers using **Node.js**, processing **AJAX** requests from front-end components programmed in **Angular** and **ReactJS**, while ensuring response efficiency.
- **Enhanced** partner-facing dashboards using **Angular**, **ReactJS 18**, and **Redux**, improving data visualization performance by 25%.
- **Combined Apache Kafka and AWS MSK** to enable real-time, event-driven processing for high-volume transaction workflows, reducing latency and improving scalability.
- **Configured** and **monitored** application environments on **Red Hat Enterprise Linux**, performing health checks, job scheduling validations, and incident resolution in collaboration with operations and infrastructure teams.
- **Maintained Swagger** documentation for internal **REST APIs**, facilitating better cross-team integration and accelerating onboarding for new developers.

- **Collaborated** directly with business stakeholders to troubleshoot issues, analyze defects, and provide root-cause analysis and long-term fixes for production incidents.
- **Managed Kubernetes** AWS EKS deployments using **Helm** charts for version-controlled rollouts and quick rollbacks.
- **Diagnosed** and **resolved** complex performance bottlenecks in **microservices**, improving transaction processing time by up to 30%.
- **Worked closely** with cross-functional **Agile** teams, ensuring smooth coordination between backend, frontend, and DevOps to meet sprint deliverables.
- Java 17 & 21 LTS readiness: performed framework compatibility checks, dependency audits, container base-image validation, and performance benchmarking, including virtual thread evaluations on Java 21.

.Environment:

Java 11,17,21 Spring Boot, Spring MVC, Spring Security, OAuth 2.0, Hibernate, JPA, Oracle 11g, Aurora PostgreSQL, DB2, REST APIs, ReactJS, Node.js, Jenkins, Apache kafka, Kubernetes, Angular, Docker, AWS (EC2, S3, RDS, ELB, CloudWatch), Terraform, JUnit, Maven, WebLogic, Bitbucket, Red Hat Linux, Helm, JIRA, Git.

Client: Johndeere, USA

Jan 2024 – Sep 2024

Role: Senior Full Stack Engineer

Project Overview:

Led the development and modernization of a secure, cloud-native Partner Management Portal for John Deere's external dealers and service partners. The platform enables third-party vendors to onboard, authenticate, and track resource utilization securely. Migrated multiple JD Prism applications from IBM DB2 to real-time API integrations using Java, Python, and PySpark for large-scale data processing. Established with a modern microservices architecture and deployed on **Azure**, the solution supports enterprise-grade scalability, compliance, and automation—core to John Deere's technology vision for precision agriculture and digital transformation.

Key Contributions:

- **Designed and Innovated** microservices architecture using **Java, Python, PySpark, Spring Boot, and Node.js**, enabling modular partner onboarding, permissions management, and service tracking.
- **Migrated** 10+ JD Prism applications from **IBM DB2** to real-time **REST APIs**, reducing CPU usage by **700,000 hours/month** and eliminating legacy dependencies.
- **Created PySpark-based ETL** pipelines for aggregating and transforming high-volume partner activity data from multiple sources, improving reporting accuracy and reducing processing time by **50%**.
- **Merged OAuth 2.0** with Spring Security to implement role-based access control and secure API token management, ensuring compliance with enterprise security standards.
- **Engineered** scalable **REST** and **GraphQL** APIs, improving system performance and enabling flexible data consumption across internal and partner-facing tools.
- **Delivered** highly responsive **UI** components in **ReactJS v18 + Redux**, reducing partner portal load times by **25%** and enhancing usability for field dealers.
- **Built** containerized services with Docker, deployed on **Azure App Services**, and orchestrated **CI/CD** pipelines using **Azure DevOps** and **GitLab**, reducing deployment cycle time by **40%**.
- **Developed** event-driven workflows in **Python, PySpark, and Apache Kafka** for real-time partner portal activity tracking, ensuring reliable and scalable message delivery.
- **Optimized** backend data workflows using **MongoDB** for unstructured usage logs and **Oracle 12c via JPA/Hibernate** for transactional partner records.
- **Applied** observability features using **Spring Boot Actuator, Azure Monitor**, and Application Insights, reducing unplanned downtime incidents by **30%**.
- **Enhanced and consumed GraphQL APIs** tightly merged with React components, simplifying data handling and reducing front-end service complexity.
- **Adopted Test-Driven Development (TDD)** practices with **JUnit, Mockito, and PyTest**, achieving **85%+ code coverage** and reducing post-deployment defects.
- **Collaborated** cross-functionally with cloud, UX, and API governance teams to ensure solutions met John Deere's technical standards, business requirements, and long-term scalability goals.

Environment:

Java 11, Python, PySpark, Spring Boot 3, Spring Security, REST APIs, GraphQL, ReactJS v18, Redux, Node.js, HTML5, CSS3, MongoDB, Oracle 12c, JPA, Hibernate, Azure (App Services, Blob Storage, API Management, Azure DevOps, Application Insights, Synapse Analytics), Docker, GitLab CI/CD, Jenkins, SonarQube, Checkmarx, Apache Kafka, JUnit, Mockito, PyTest, IntelliJ IDEA.

Client: Transamerica (via TCS), India

Nov2021 –Aug 2023

Role: Software Developer

Project Overview:

Contributed to a secure, scalable **policy administration and claims** platform for the insurance domain, specifically serving healthcare coverage for elderly customers. The solution ensured strict compliance with **HIPAA** regulations to protect patient health information (PHI). Prior to starting the project, completed formal **HIPAA training** to meet compliance and security requirements. In addition to backend services in Java/Spring Boot, led key UI improvements with **HTML5, CSS3, and jQuery/JSP** to enhance usability, responsiveness, and accessibility.

Key Responsibilities:

- **Constructed and refined UI screens using HTML5, CSS3, JSP, and jQuery**, standardizing layouts, typography, and form controls; introduced a lightweight design system for consistent styling across modules.
- **Responsive redesign** with mobile-first **CSS** and flexible grid utilities, improving usability for field agents on tablets and reducing CSS duplication by ~35%.
- **Accessibility:** Applied semantic **HTML**, **ARIA** roles, focus states, and keyboard navigation; improved screen-reader compatibility and form error announcements.
- **Front-end performance:** Minified assets, optimized **DOM** operations, and deferred noncritical scripts; **reduced page load time by >25%** on high-traffic flows.
- **Validation UX:** Implemented client-side checks (**HTML5 validation + jQuery**) aligned with **Jakarta Bean Validation** rules server-side to cut invalid submissions and rework.
- **Backend services:** Engineered **Spring Boot REST** endpoints for policy issuance/updates and claims; integrated **SOAP** services with external providers and verified contracts via **SOAPUI**.
- **Data layer:** Used **Hibernate/JPA** with **Oracle 11g** and **SQL Server** (via Microsoft SQL Server Management Studio) for transactional data management; tuned hot queries and batch jobs for throughput.
- **Quality & delivery:** Automated testing with **JUnit/Mockito** (85%+ coverage), CI/CD with **Jenkins** and **Azure DevOps**, version control with **Bitbucket**, and backlog tracking with **JIRA**.
- Configured structured logging with **Log4J**, reducing average production issue resolution time by 35%.

Environment:

Java 1.8, Spring Boot, HTML5, CSS3, JSP, jQuery, Jakarta Bean Validation, REST, SOAP, Hibernate/JPA, Oracle 11g, Microsoft SQL Server (SSMS), JUnit, Mockito, SOAPUI, Log4J, Maven/Gradle, Jenkins, Azure DevOps, Bitbucket, JIRA, SonarQube, Agile (SAFe), HIPAA compliance

Client: Trianz, India

Sep 2018 – Oct 2021

Role: Software Developer

Project Overview:

Worked on a large-scale enterprise application supporting internal workflows for customer onboarding, inventory management, and operations reporting. The solution required robust backend integrations, cross-browser frontend design, and seamless communication between legacy and modern systems.

Key Responsibilities:

- Developed **responsive and cross-browser compatible UI components** using **HTML5, CSS3, JavaScript, and jQuery**, improving client-facing user experience and reducing UI defect rates by over **30%** across project modules.
- Built and maintained **enterprise backend services** using **Spring Boot and Struts MVC**, supporting digital transformation initiatives; **Improved service response times by 25%** through caching and efficient endpoint design.

- Merged both **SOAP and RESTful web services** to ensure seamless communication between internal modules and third-party vendor systems, enabling reliable data exchange at scale.
- Architected reusable and modular UI layouts using **Struts Tiles**, accelerating screen development and cutting front-end delivery time by up to **40%** on new client workflows.
- Implemented **XML transformation and validation workflows** using **XSL, XSLT, and SAX parsers** to support dynamic reporting and external system integrations.
- Wrote **unit and integration test cases** using **JUnit**, aligned with **Test-Driven Development (TDD)** practices, enhancing application reliability and reducing defect leakage.
- Automated **build and deployment processes** using **Apache Ant** and **Maven**, contributing to a **50% drop in QA release errors** through consistent build configurations.
- Leveraged **Docker** containers to standardize development and test environments, significantly improving setup efficiency and reducing system discrepancies.
- Automated Windows server configuration tasks using **PowerShell** scripts.
- Configured structured **logging using Log4J**, which helped reduce average production issue resolution time by **35%** through better traceability and diagnostics.
- Actively participated in **Agile ceremonies** (sprint planning, daily standups, retrospectives), contributing to improved delivery predictability and team collaboration.
- Collaborated closely with business analysts and QA teams to translate business requirements into **technical specifications**, reducing rework and improving story turnaround time.
- Performed **performance testing and memory profiling** using **JMeter**, identifying thread contention and optimizing memory management for production-like environments.
- Authored **technical documentation** on system design, integration points, and data flows to support internal knowledge sharing and new developer onboarding.
- Participated in **peer code reviews** to uphold code quality, identify potential performance bottlenecks, and ensure adherence to **Trianz's best practices** in security and maintainability.
- Managed source code using **CVS**, maintaining clear branching strategies and ensuring smooth collaboration across multiple development and release tracks.

Environment:

Java 8, Spring Boot, Struts, JSP, JSTL, SOAP Web Services, REST APIs, HTML5, CSS3, JavaScript, Node.js, XML, XSLT, SAX, Oracle 10g, JDBC, JMS, ANT, Maven, WebLogic, JUnit, TDD, Docker, Log4J, CVS, JMeter, Agile (Scrum)
