Professional Summary

- **Full Stack Developer** with around **5 years of experience** in **planning, creating, and maintaining** scalable, enterprise-level applications using **microservices architecture** and **cloud computing**.
- Strong expertise in **Java** and the **Spring Framework** (**Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring Batch**) for building **robust and secure microservices**.
- **Proficient in Object-Oriented Programming (OOP)** principles such as **Encapsulation, Inheritance, Polymorphism, and Abstraction**, ensuring **clean, reusable, and maintainable code**.
- Experienced in applying **SOLID principles, Design Patterns (Factory, Singleton, Observer, Strategy, etc.), and Domain-Driven Design (DDD)** to enhance code scalability and maintainability.
- **Proficient in Angular (10/8/6/4), JavaScript, TypeScript, HTML5, CSS3, Bootstrap, jQuery** for building **dynamic and responsive user interfaces**.
- Extensive hands-on experience with **Azure (App Services, Functions, AKS, DevOps, Blob Storage)** and **AWS (EC2, S3, Lambda, RDS, CloudWatch, Elastic Beanstalk)** for **cloud-native application deployment and infrastructure management**.
- **Planned and expanded RESTful APIs**, incorporated **third-party services**, and enforced **authentication using Spring Security, OAuth2, JWT**.
- Expertise in **SQL (Oracle, MySQL, PostgreSQL)** and **NoSQL (MongoDB)** databases, ensuring **efficient data modeling, query tuning, and performance enhancement**.
- **Structured CI/CD pipelines** using **Jenkins, Azure DevOps, GitHub Actions**, and **version control with Git, Bitbucket** for **seamless deployments**.
- Hands-on experience with **Docker, Kubernetes** for **containerization, orchestration, and scalable service management**.
- **Merged Apache Kafka, JMS** for **real-time event streaming** and **asynchronous processing** in **event-driven architectures**.
- Applied **JUnit, Mockito** for **unit testing**, ensuring **high-quality, maintainable code with TDD best practices**.
- **Leveraged Resilience4j Circuit Breaker** for **fault tolerance, proactive monitoring** with **Log4J, Zipkin**, and **streamlined data workflows** using **Azure Data Factory**.
- **Worked together** with cross-functional teams, **cooperated** with stakeholders to deliver **scalable, highperformance solutions**.
- **Strong problem-solving, analytical, and leadership skills** with experience in **mentoring junior developers** and **leading technical discussions**.

Skills

Languages:	Java 11/8, PL/SQL , JS, Python
Java/J2EE Technologies:	Java, JDBC, JMS, Java Beans, Java Multithreading, Generics and Collections, EJB, Servlets, MVC, Log4j, JUNIT , Maven, JSP
Web Technologies:	HTML5, XML, DOM, CSS3, JavaScript, XPath, jQuery, Angular 10/8/6, Angular.JS, Bootstrap, SOAP, REST, Node.JS
Methodologies:	Agile, Waterfall
Frameworks and IDE's:	Spring, Spring Boot, Hibernate, MVC, JPA, Eclipse, VSCode, IntelliJ
Web/App Servers:	IBM WebSphere, Apache Tomcat, Web Logic, JBoss
Other tools:	Jenkins, Docker, Kubernetes, AWS, Agile, GIT, Bitbucket, REST, Selenium
Databases/Tools:	Oracle, SQL Server, My-SQL, PostgreSQL, Azure, AWS, PL/SQL, Jenkins
Operating Systems:	Windows, Linux

Professional Experience

Client: Liberty Mutual

Full Stack Developer

Feb. 2024 - Present

- Engineered **resilient Spring Boot microservices** for claims processing, integrating **Resilience4j** for circuit-breaking and **fault tolerance**, optimizing response times from 58% to 75%, and ensuring seamless claims tracking through scalable **RESTful APIs** while actively contributing to all phases of the SDLC.

- Incorporated **AWS Lambda, Apache Kafka, and JMS** for real-time claim status updates, improving messaging capabilities and reducing update delays by 30%.
- Optimized **MongoDB, PostgreSQL, and Redis** for structured and unstructured data storage, enhancing Redis caching efficiency and boosting query performance from 68% to 80%.
- **Created and enhanced** interactive **React.js** dashboards for **real-time claims tracking, analytics, and customer request management**, improving user engagement from 60% to 78%.
- **Enforced OAuth2 and JWT-based authentication** to establish secure data access and ensure compliance with security best practices.
- Orchestrated and deployed applications using **Docker, Kubernetes, and AWS Elastic Beanstalk**, achieving high scalability and availability, handling up to 1,000+ concurrent users.
- Designed and developed **responsive UI components** using **HTML, JavaScript, XML, JSP, CSS, and React.js**, enhancing user experience, while building **React.js and Node.js** applications with **Flux and Redux** architecture for efficient state management.
- Leveraged **Java 8 features** such as **Lambda Expressions, Streams, and Functional Interfaces** to streamline code efficiency.
- **Merged Apache Camel, ActiveMQ, and JMS** for **seamless middleware communication and enterprise messaging**.
- Applied **JPA and Hibernate ORM frameworks** for **efficient data persistence and retrieval mechanisms**.
- **Engineered scalable and secure** applications using **Spring Boot, Spring Security, and Spring MVC**.
- **Executed AWS Lambda** to automate **Elasticsearch indexing and MongoDB data management**, improving search efficiency from 55% to 72%.
- **Blended REST APIs with Apache Kafka** to support **asynchronous event-driven processing** for scalable microservices.
- Optimized **CI/CD pipelines** with **Jenkins**, automating build, testing, and deployment for seamless integration, while managing **Kubernetes Pods and clusters** for efficient container orchestration and high availability.
- Strengthened **application security** by leveraging **AWS IAM, AWS KMS, and AWS Shield** for **data protection and access control**.
- Crafted **high-performance Java APIs for AWS Lambda**, optimizing cloud orchestration and resource utilization.
- Conducted rigorous **unit and integration testing** using **JUnit, Mockito, REST Assured, and Postman** to validate functionality.
- Used **Eclipse, IntelliJ IDEA, and VS Code** for development while managing **version control through GitHub and Bitbucket**.
- **Collaborated in an Agile Scrum environment**, contributing to **sprint planning, backlog grooming, daily standups, and retrospectives**, using **JIRA** for project tracking.
- Built **exception handling frameworks** and employed **Log4j, ELK Stack, and AWS CloudWatch** for **logging and monitoring**.

Environment : Java 8, Spring MVC, Spring Security, Spring Boot, Microservices, Hibernate, Git, JPA, RESTful, HTML5, JavaScript, jQuery, Node.JS, React.JS, AWS, Docker, XML, EJB, Log4jJUnit, Jenkins, SOAP, MongoDB, SQL, Agile

Client: Tata Digital
System Engineer

May 2022 - May 2023

- Led the development of Tata Pay, a microservices-driven payment platform, overseeing requirement gathering, architecture, implementation, testing, and cloud deployment.
- Structured and built scalable microservices using **Spring Boot** and **Spring Cloud**, ensuring high availability, fault tolerance, and optimized performance for millions of transactions daily.
- Developed **RESTful APIs** to enable seamless cross-service communication, ensuring low-latency and secure transaction processing for UPI, credit/debit cards, and wallets.
- Architected distributed systems using **Eureka, Config Server, and API Gateway**, optimizing service discovery, centralized configuration, and load balancing.
- Integrated **Apache Kafka** for event-driven messaging, enabling real-time transaction processing and reducing system delays by 30%.
- Enhanced security with **Spring Security** and **OAuth2**, implementing multi-factor authentication and role-based access control.
- Configured and optimized **PostgreSQL** schemas, crafting efficient queries, stored procedures, and indexing strategies to improve database response times.
- Deployed containerized services with **Docker** and **Kubernetes**, ensuring dynamic scaling and resilience across cloud environments.
- Leveraged **Azure services**, including Virtual Machines, Blob Storage, Service Bus, Functions, Monitor, and Azure SQL Database, for cloud deployment, monitoring, and scalability.
- Automated **CI/CD pipelines** with Azure DevOps, streamlining code integration, automated testing, and deployments, leading to a 50% reduction in deployment time.
- Implemented **Redis caching**, improving application response times and database efficiency.
- Developed and executed unit and integration tests with **JUnit** and **Mockito**, ensuring 95% test coverage for missioncritical services.

- Integrated **Angular** with **RESTful APIs**, ensuring seamless communication with microservices for real-time transaction updates and notifications.
- Utilized **NgRx** for efficient state management, improving application maintainability and performance.
- Collaborated in Agile SCRUM sprints, using **JIRA** for task tracking, ensuring on-time delivery of features and system enhancements.

Environment: Java 8, Spring MVC, Spring Boot, Microservices, Hibernate, Git, AWS, HTML5, CSS3, JavaScript, TypeScript, Angular 4/6, AngularJS, DAO, Log4j, JUnit, SOAP, RESTful, SQL, Agile, Windows.

Client: Verizon
Software Engineer

Dec 2019 - May 2022

- Engineered and maintained enterprise-grade applications using **Java 11**, **Spring MVC**, **Spring Boot**, **Hibernate**, and **JPA**, enhancing core business functionality.
- Architected a scalable **microservices architecture**, optimizing system performance and enabling robust enterprise solutions.
- Designed and incorporated **SOAP** and **RESTful** web services, facilitating smooth integration between internal and external systems.
- Leveraged **JMS**, **XML**, and **JSON** for efficient messaging and data exchange within Decentralized systems.
- Used front-end features using **HTML5**, **CSS3**, **JavaScript**, **Angular 10** creating responsive and high-performance UIs.
- **Utilized EJB (Enterprise JavaBeans)** applications to migrate legacy systems into **Spring Boot**, streamlining backend logic and optimizing enterprise-level processing.
- Consolidated **MongoDB** and **SQL** databases to optimize data retrieval and improve system query performance.
- Led system performance tuning, reducing latency and improving overall operational efficiency.
- Employed **Contract Driven Development (CDD)** to define API contracts, ensuring smooth integration between microservices.
- Developed comprehensive **unit** and **integration testing** frameworks using **JUnit** and **Mockito**, increasing code reliability and coverage.
- Adhered to best practices in **Agile methodologies** and **CI/CD pipelines**, improving delivery efficiency, while implementing **Log4j** for logging and monitoring, and using **Git** for version control. Automated deployment and infrastructure provisioning with **Azure DevOps**, accelerating release cycles.
- Integrated **Azure Active Directory (Azure AD)** for secure authentication and **RBAC**, managed data storage with **Azure Storage services**, and used **Azure Monitor** and **Application Insights** for real-time performance monitoring and issue resolution.
- Collaborated with cross-functional teams, including **QA**, **DevOps**, and **product management**, to drive project success.
- Actively participated in **sprint planning**, code reviews, and technical discussions, contributing to process improvements.
- Led initiatives in **BDD (Behavior-Driven Development)** and **Cucumber Testing**, standardizing testing practices to enhance product quality.
- Led the onboarding and **mentorship** of new developers, providing **technical** guidance and contributing to **backend** development through architecture design and problem-solving.
- Optimized system performance by managing device activations, feature additions, and wireless number changes, while improving team collaboration and resource management through **One Talk Features** for scheduling and largescale feature management.

Education

Master of Science in Computer Science	Lamar University	May 2023 - Dec 2024
Relevant Coursework: Distributed Systems, Algorithms, Cloud Computing, Data Structures, Database Systems		

Certifications

Azure Administrator (AZ-104)	AZ Fundamentals (AZ-900)	AZ Database Administrator (DP-300)
Azure Database Fundamentals(DP-900)	Azure AI Fundamentals(AI-900)
