

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience in designing, developing, and deploying scalable enterprise applications across insurance, corporate, and tech domains. Expertise in Java (11/17/21), Python, JavaScript, Angular, React.js, Spring Boot, and Flask/Django, with strong exposure to cloud-native development (AWS, Azure, GCP), microservices architectures, CI/CD pipelines, and data engineering (Talend, Kafka, Spark). Proven ability to deliver high-performance, secure, and reliable systems, leveraging modern DevOps practices, automated testing, and agile collaboration. Experienced in AI/ML scripting for process automation, high-volume transactional systems, and end-to-end application lifecycle management.

TECHNICAL SKILLS

Core Languages: Python, Java 11/17/21, JavaScript, C#

Front-end Frameworks: Angular v14/v16, React.js, HTML5, CSS3, TypeScript

Back-end Frameworks: Spring Boot, Flask, Django

Cloud Platforms & Services:

AWS (EC2, S3, Lambda, RDS, DynamoDB, Cloud Build, IAM)

Microsoft Azure (App Services, Functions, Azure Kubernetes Service - AKS)

Google Cloud Platform (App Engine, Compute Engine, BigQuery)

DevOps & CI/CD: Docker, Kubernetes, Jenkins, Git, Maven, Terraform, GitLab CI/CD

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Oracle PL/SQL

Data Engineering & Messaging: Talend, Apache Spark, Apache Kafka, Message Queues (RabbitMQ, AWS SQS)

Testing & QA: JUnit, Mockito, Selenium, pytest, Automated Testing, Unit & Integration Testing

Architecture & Integration: Microservices Architecture, RESTful APIs, Modular Service Design, Event-Driven Architecture

Agile & Collaboration Tools: Agile/Scrum Methodologies, JIRA, Trello, Asana, Cross-Functional Team Collaboration

Operating Systems & Development Environments: Linux/Unix, Windows

PROFESSIONAL EXPERIENCE

State Farm | USA (*Software Engineer*)

Aug 2024 – Present

Roles & Responsibilities:

- Developed and maintained secure, high-performance backend systems using Java 17/21, Spring Boot, and RESTful APIs, supporting mission-critical insurance operations.
- Built modern, responsive front-end components with Angular v16, enhancing policy management and customer service interfaces.
- Designed and deployed containerized microservices using Docker and Kubernetes, improving scalability, reducing downtime, and accelerating insurance product delivery.
- Implemented AWS services (EC2, S3, RDS, Lambda) for cloud-native application development, increasing system uptime and reducing infrastructure costs by 20%.
- Automated build, testing, and deployment pipelines with Jenkins and GitLab CI/CD, streamlining release cycles and ensuring consistent feature delivery.
- Developed Python scripts for internal reporting, compliance automation, and basic AI/ML-based claim anomaly detection, reducing manual audit effort by 40% and improving data accuracy.
- Conducted unit testing (JUnit, Mockito) and UI automation testing (Selenium) to ensure high code quality and reliable application performance.
- Implemented Apache Kafka-based event streaming for real-time data processing and inter-service communication, enhancing responsiveness and reliability of claims and underwriting systems.
- Worked with MongoDB and PostgreSQL for flexible, scalable data storage and efficient querying across structured and semi-structured datasets.
- Collaborated with cross-functional Agile teams to refine requirements, plan sprints, and deliver features aligned with business goals.
- Played a key role in migrating legacy insurance processes to microservices, enhancing operational efficiency and reducing request processing time by 45%.
- Delivered critical enhancements for internal claims review systems, improving turnaround times and earning positive feedback from stakeholders.

TCS | India (*Software Engineer*)

Jan 2022 – June 2023

Roles & Responsibilities:

- Contributed to the development of a Meeting Management System, implementing both frontend (Angular 14) and backend (Java 11) components, delivering a scalable and maintainable enterprise solution.
- Designed and implemented RESTful APIs and modular Java 11 microservices, deployed on AWS, enabling secure, high-performance integrations across distributed systems.
- Developed full-stack features using Python and JavaScript, improving backend flexibility and API response times by 30%.
- Created responsive, reusable UI components with Angular and CSS3, enhancing internal dashboards and admin tools.

- Implemented automated testing with JUnit, improving code quality and reducing defects during releases.
- Managed version control using Git, ensuring seamless collaboration and tracking of code changes across teams
- Automated CI/CD pipelines using Jenkins and Maven, streamlining deployments and reducing manual errors by 40%.
- Monitored application health daily and weekly, proactively resolving issues to maintain performance and system reliability.
- Leveraged AWS services (App Engine, Cloud Build, IAM, S3) for secure, scalable cloud deployments and environment management.
- Designed and maintained Oracle PL/SQL procedures, packages, and triggers to support complex business logic, and optimized MySQL queries for high-volume transactional systems.
- Built and optimized ETL pipelines with Talend, improving data ingestion and transformation performance by 25%.
- Collaborated with cross-functional teams in Agile environments using tools like Asana, ensuring timely delivery of features aligned with business requirements.

Ojascore Solutions PVT LTD. | India *(Junior Software Engineer)*

May 2020 – Dec 2021

Roles & Responsibilities:

- Developed and maintained scalable RESTful APIs using Python and JavaScript, improving API response times by 30% for internal service platforms.
- Developed and maintained scalable RESTful APIs using Python and Java 11, improving response times by 30% across internal service platforms.
- Designed and optimized Java-based microservices for core business logic modules, enhancing application scalability, maintainability, and performance.
- Built backend services and scripts in Python for data processing, automation, and integration with frontend systems, improving system efficiency and flexibility.
- Collaborated with the backend team to optimize MySQL schemas and data models, enhancing query performance for high-volume transactional operations.
- Designed dynamic, responsive front-end components using React.js and CSS3, improving user experience across client dashboards and admin tools.
- Built and optimized ETL pipelines with Talend and Python scripts, increasing data accuracy and reducing processing times by 25%.
- Implemented security best practices across Python and Java modules, ensuring secure data handling, access control, and compliance.
- Leveraged AWS services (S3, EC2) for hosting and scalable storage, and integrated CI/CD pipelines using Jenkins and Maven, reducing manual errors and cutting deployment time by 40%.

EDUCATION

Masters in Computer Science | University of Bridgeport | May 2025
