

VENKATA MAHESH KORRAPATI

JAVA DEVELOPMENT ENGINEER

Email: venkatakorrapati079@gmail.com | Phone: (616)-210-3961 | Address: Frisco, Texas, 75034

SUMMARY

- Over around **6+ years** of experience in Object Oriented Analysis, Design, Development, Testing, Implementation and Post Implementation Supported in all **phases** of **software distributed applications**. Well versed in both Server-side and Client-side programming.
- Implemented **multithreading** to enhance application **performance** and **concurrency**, ensuring efficient handling of **high-volume transactions**.
- Effectively applied OOPs principles to enhance code reusability and maintainability, ensuring smooth parallel execution and thread safety.
- Experienced in **developing microservices** and **REST API's** using **Spring boot** and with various modules in Spring framework like core, data, MVC, AOP etc.
- Experience in utilizing **Java 8** and **Java 11** features to write concise, maintainable, and efficient code, leveraging Lambdas and Functional Interfaces for cleaner business logic, Default Methods for interface evolution, and **Stream API** for parallel processing, bulk data operations, and improved performance.
- Designed and optimized event driven architectures by leveraging models like **Kafka** and **RabbitMQ**.
- Implemented asynchronous processing, **real-time data streaming** to enhance system **scalability** and **resilience** in **distributed environments**.
- Extensive experience on Oracle and MySQL, Implementing complex queries, stored procedures, and indexing strategies to optimize data retrieval and transaction performance across all projects, ensuring efficient query execution, reduced latency, and enhanced scalability in high-volume applications.
- Involved in performing **Unit Testing** and **Integration Testing** with popular frameworks like **Junit**, **Mockito**, **Spring Boot Test**.
- Designed and implemented various **DevOps** and **DevSecOps** pipelines using wide range of popular tools and platforms like **GitHub Actions**, **Jenkins**, **ArgoCD**
- Experience in **making** and **maintaining** containers using **Docker** and **Kubernetes** platform to avoid manual external tasks. Deployed applications to **AWS(cloud)** and leveraged ECS and EKS services to run automation jobs.

SKILL SET

Programming Languages	Java, Python, SQL.
Web Technologies	JDBC, Servlets
IDE	IntelliJ
Frame Works	Spring, Spring Boot, Hibernate, JPA, Restful Webservices
Databases	MySQL, Oracle, PostgreSQL, MongoDB
Cloud and DevOps	AWS, GitHub Actions, Jenkins, Docker, ArgoCD, Kubernetes, JIRA

PROFESSIONAL EXPERIENCE

Project Name: Dealership Platform.

Java Developer

Description:

A scalable platform designed to connect multiple automotive dealers with customers. Rather than being limited to a single dealer's inventory, the platform aggregates inventories from many dealers, enabling customers to browse a wide selection of vehicles based on dealer location and other criteria. Dealers can opt to join the platform, providing access to their inventory for customers to view and purchase. This system enhances the online car-buying experience for customers and helps streamline the sales process for dealers by automating inventory and order management.

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) such as requirements gathering, modelling, analysis, design, development and testing and used AGILE framework.
- Developed various **helper classes** needed using Core Java concepts such as **OOP**, Exception handling, Collection Framework, Generics, Input/output System, **Multi-threading** and Data Structures to implement various features.
- Developed and maintained **microservices-based** applications using **Java**, **Spring Boot**, and **RESTful APIs**, ensuring high scalability and modular design.
- Implemented **event-driven** communication between microservices using **Apache Kafka**, enabling real-time inventory updates and seamless order processing.
- Used AWS SQS for asynchronous processing of vehicle report generation, AWS SNS for real-time notifications and alerts, AWS RDS for secure and optimized storage of transaction and purchase data, and S3 for vehicle image and document storage, ensuring high availability.
- Implemented **design patterns** such as **Adaptor pattern** to integrate **third-part APIs** for vehicle history reports, **Bean factory** for centralized and efficient **dependency management**, **Singleton** for maintaining **shared instances** of critical services.
- Worked with MongoDB and PostgreSQL for data persistence, optimized queries, and ensured secure transactions. Utilized AWS RDS and S3 for efficient data storage and retrieval.
- Designed **Unit Test** cases with **Junit** as part of **CI** process included.
- Implemented optimized **DevSecOps** pipeline using **GitHub Actions**, **Docker**, **ArgoCD** for Continuous delivery, **Kubernetes** for containers administration.
- Implemented centralized logging and monitoring using Log4J and cloud-native monitoring tools for performance tracking.

Environment: Java 11, Spring IOC, Spring AOP, Spring Security, Spring Boot, Junit, Maven, Hibernate, Apache Kafka, AWS, Oracle, MongoDB, GitHub , GitHub Actions, Docker, ArgoCD, Kubernetes, Log4J.

Project Name: eBuild Construct.

Java Developer

Description: eBUILD Construct is complete construction software which includes project costing and financial management solution designed to fit with the way you do business. It can estimate all job costs and managing revenues, as well as effectively carrying out complete financial reporting in a single solution.

Responsibilities:

- Involved in Requirements gathering, Analysis, Design, Development and Testing of application using AGILE methodology (SCRUM).

- Designed, developed, and maintained **microservices** using **Java, Spring Boot** ensuring a scalable and efficient construction project management solution. Developed and exposed RESTful APIs for seamless communication between financial modules, cost estimation services, and third-party accounting tools.
- Implemented **API Gateway** for authentication, rate limiting, and security policies, ensuring secure and optimized API traffic management. Applied OAuth2 and JWT for secure authentication.
- Integrated **Jenkins** for **continuous integration** and **automated deployments**, improving release efficiency.
- Utilized **Docker** for **containerization** and **Kubernetes (AKS/GKE)** for **orchestrating** deployments, ensuring high availability and scalability in a cloud-native environment.
- Used **Design Patterns** such as **Singleton, Factory, MVC, Data Access Object**.
- Wrote database queries using SQL and PL/SQL for accessing, manipulating and updating Oracle Database.
- Performed **Unit testing** and **Integration Testing** with **Junit** and **Spring Boot Test**
- Integrated **RabbitMQ** for **asynchronous messaging, task processing, and inter-service communication**, ensuring reliable message delivery and system decoupling.
- Monitored the Error logs using Log4J and fixed the problems.
- **Deployed** applications on **AWS** leveraging EC2 for scalability, S3 for document storage, SNS for real-time alerts, and RDS for optimized financial data management while ensuring security compliance.
- **Used GIT** to maintain the **version of the files** and took the responsibility to do the code merges from branch to trunk and creating new branch when new feature implementation starts.
- Worked on Jira for User requirements and used Jira as bug tracking tools.

Environment: Java 8, Spring IOC, Spring AOP, Spring MVC, Spring Security, Spring Boot, Spring Data JPA, Spring Boot Test, Junit, Maven, Hibernate, RabbitMQ, Oracle DB, Log4J, GitHub, AWS, Jenkins, Docker, Kubernetes(AKS).

Client: ITC Infotech, Pune, India.
Project Name: I Cap.

Jun 2021 -Jun 2022

Java Developer

Description: I Cap is automation for approving Loans called as Facility. The person / organization approaches the Bank for getting loan is called the Client. The person who processes the Client application is called as the Credit Writer and the person who approves the Loan (Facility) is called as the Adjudicator. In this application we mainly deal about finding the Risk Rating for a client. This Risk Rating is nothing, but a measure of risk involved in providing the Loan (Facility) to the Client. Risk Rating plays a vital role in the approval of Loan (Facility).

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development using AGILE.
- Implemented **Multi-Threaded Environment** and used most of the interfaces under the **Collection framework** by using Core Java concepts to optimize risk rating calculations, parallelize loan processing, and enhance system performance.
- Configured beans in spring configuration file with **Spring IOC, Spring MVC and Spring AOP** for enhanced modules.
- Used **Hibernate** as the **ORM** tool to simplify interactivity with database objects.
- Implemented Java and J2EE Design patterns like Data Transfer Object (DTO), Data Access Object and Service Locator.
- Involved in designing and implementing scalable, **RESTful** and Microservices in the back end to handle loan applications, risk calculations and approval workflows.
- Written SQL Queries and stored procedures to interact with Oracle.

- Involved in designing and Implementing **CI (Continuous Integration)** by Integrating **Jenkins** multi branch pipeline structure. Designed **Unit Test cases** as part of the process using **Junit**.
- Used **GIT for version control** & Log4J for logging and developed the pom.xml using Maven for compiling the dependencies.

Environment: Java EE, Spring IOC, Spring MVC, Spring AOP, HTML5, CSS3, JavaScript, Hibernate, Junit, REST, Oracle, IntelliJ, GIT, Jenkins, Log4J, Maven.

Client: Accenture, Pune, India.

Jan 2019 - Apr 2021

Project Name: enhanced-Risk Assessment Manager (e-RAM).

Java Developer

Description:

e-RAM is an Intranet-based, enterprise-wide risk management software solution that combines transaction risk. Management and decision support with robust portfolio analytics. With e-RAM you can identify total company-wide risk exposure, review your account base from anywhere in the organization, benchmark performance by location and consolidate critical business details to gain a more complete understanding of the potential risks and rewards associated with each customer - all from your company's Intranet. E-RAM provides a big picture view of your customer base, across all divisions and branches, functioning as both an operational and strategic tool for business growth.

Responsibilities:

- Actively involved in various phases of Software Development Life Cycle (SDLC) such as Design, Analysis, Development and Testing using **AGILE**.
- Used Core Java concepts such as multi-threading, collections, garbage collection to optimize performance and manage large datasets efficiently.
- Designed and developed application using Spring Framework modules like Spring IOC, Spring AOP, Spring MVC, Spring Security and Spring Data.
- Hibernate Query Language (HQL) was used to perform various queries in the database.
- Implemented different **Design patterns** like **DAO, Singleton, Factory** to enhance the system's architecture and maintainability.
- Involved in development of **REST Web Services** using Annotations to extract client related data from databases.
- Developed stored procedures, triggers and functions with **PL/SQL** for Oracle database.
- Integrated **Mockito** with **Junit** for mocking dependencies in unit tests.
- Worked on Log4j for logging errors, messages and performance logs and GIT for version control.
- Using JIRA to assign, track, report and audit the issues in the application.
- Setup the **continuous Integration (CI)** process for the application using the **Jenkins**.

Environment: Java EE, Spring IOC, Spring MVC, Spring AOP, Spring Security, Spring Data, Hibernate, Mockito, Junit, Oracle DB, Log4J, GIT, Jira, Jenkins.

EDUCATION

Grand Valley State University, Allendale, MI: Master of Science in Applied Computer Science
