

Venkata Raghavendra Kumar Immadisetti

Java Full Stack Developer

(513)-393-9397

raghavendraimmadisetti89@gmail.com

EDUCATION: Wright state
University, Masters in Computer Science,
USA

OBJECTIVE: Detail-oriented and results-driven Java Full Stack Developer with **3 years** of experience in designing, developing, and deploying dynamic web applications. Proficient in Java, Spring, Hibernate, Angular, and RESTful services, with a strong focus on both front-end and back-end development.

PROFILE SUMMARY:

- Highly skilled **Java Full Stack Developer** with **3+ years** of experience in designing and implementing dynamic, scalable web applications.
- Proficient in front-end technologies including **HTML/HTML5**, **CSS/CSS3**, **Bootstrap**, and **JSP** for developing responsive, user-friendly web interfaces, with strong experience in **Ajax** for dynamic content loading and integrating **XML** and **JSON** for data exchange between front-end and back-end systems.
- Experienced in full-stack development using **JAVA** and **Spring Boot** for building efficient server-side applications, and proficient in **ReactJS** for developing dynamic, responsive user interfaces.
- Strong experience working with relational and **NoSQL** databases including **Oracle**, **MySQL**, **SQL**, **PostgreSQL**, **MongoDB**, **Cassandra**, and **DynamoDB** for efficient data storage, retrieval, and management across diverse application environments.
- Proficient in using **Maven** and **Gradle** for build automation, dependency management, and project management to streamline the development process and ensure consistent application deployment.
- Experienced in leveraging **AWS** services such as **EC2**, **S3**, **Lambda**, **RDS**, **DynamoDB**, and **CloudFormation** for cloud-based application deployment, infrastructure management, and data storage solutions.
- Proficient in utilizing **Azure** services including **Azure App Services**, **Azure SQL Database**, **Azure Blob Storage**, **Azure Functions**, and **Azure DevOps** for developing, deploying, and managing scalable cloud applications and infrastructure.
- Proficient in **JavaScript** and **TypeScript** for developing dynamic, high-performance web applications, with strong experience in using **jQuery** for enhancing front-end functionality and simplifying DOM manipulation.
- Experienced in developing enterprise-level applications using **EJB**, **J2EE**, and **JSP**, with strong expertise in implementing **JSTL** and **Custom Tag Libraries** to enhance functionality and optimize code reusability in Java-based web applications.
- Proficient in building robust, scalable applications using **JAX-RS** for RESTful services, **JDBC** for database connectivity, **Servlets** for handling **HTTP** requests, and **JNDI** for resource lookups, with experience in **JMS** for messaging and **JAXB** for **XML** binding and data transformation.
- Experienced in test-driven development with **JUnit** for unit testing and **Mockito** for mocking dependencies, ensuring high-quality, maintainable code through effective testing practices.
- Expertise in building robust, secure, and scalable applications using **Spring MVC** for web development, **Spring Security** for authentication and authorization, **Spring Boot** for rapid application development, and **JPA/Hibernate** for **ORM**; skilled in **Spring JDBC**, **Spring Data JPA**, and **Spring Data REST** for efficient data access and **RESTful** service integration.
- Proficient in using **Log4j** for effective logging and troubleshooting, and experienced with **Apache** web server for managing web applications and optimizing performance in production environments.
- Skilled in implementing **CI/CD** pipelines using **Jenkins** for continuous integration and deployment, with strong experience in version control and collaboration through **Git** for efficient code management and seamless collaboration across development teams.
- Experienced in building serverless applications using **AWS Lambda**, enabling efficient, scalable solutions by executing code in response to events, without managing servers, and integrating with various **AWS** services like **API Gateway**, **S3**, and **DynamoDB**.
- Designed and implemented responsive and user-friendly web applications using **ASP.NET Web Forms**.
- Excellent problem-solving abilities, capable of diagnosing issues and implementing effective solutions

TECHNICAL SKILLS:

- **Programming Languages:** Java, JavaScript, TypeScript, HTML/HTML5, CSS/CSS3, SQL
- **Web Technologies:** JSP, Servlets, JAX-RS, JSTL, Custom Tag Libraries, AJAX, XML, JSON, RESTful APIs
- **Frameworks:** Spring MVC, Spring Boot, Spring Security, Spring Data JPA, Spring Data REST, Spring JDBC, Hibernate, JPA,
- **Front-End Libraries/Frameworks:** ReactJS, Angular, NodeJS, Express, jQuery, Bootstrap, TypeScript
- **Databases:** Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB
- **Version Control:** Git, GitHub, Bitbucket
- **Build Tools:** Maven, Gradle
- **Cloud Technologies:** AWS (AWS Lambda, EC2, S3, RDS, DynamoDB, API Gateway, CloudFormation), Azure
- **Testing Tools:** JUnit, Mockito, Selenium
- **CI/CD Tools:** Jenkins, Docker, Kubernetes
- **Messaging:** JMS, ActiveMQ
- **Containerization:** Docker, Kubernetes
- **Web Servers:** Apache Tomcat, JBoss
- **IDE:** Eclipse, IntelliJ IDEA, VS Code
- **Logging and Monitoring:** Log4j, SLF4J
- **Other Technologies:** AWS Lambda, JAX-RS, Apache, JDBC, JNDI, JAXB, JMS

WORK EXPERIENCE:

Kroger

Cincinnati, Ohio, USA

Java Full Stack Developer

Jan 2025 – Present

Description: Kroger is one of the largest supermarket chains offers a wide range of products. Design and implement responsive UIs using HTML, CSS, and JavaScript frameworks and optimize front-end performance for faster load times and Develop server-side logic and database interactions using Node.js, Django, Spring Boot.

Responsibilities:

- Developed responsive and visually appealing **UI components** using **HTML**, **CSS**, and **JavaScript** frameworks like **React** to enhance user experience and Implemented client-side logic with **Vue.js** for seamless interactivity.
- Designed and built **RESTful APIs** with **Spring Boot** to ensure effective communication between front-end and back-end systems.
- Managed relational databases like **MySQL** and **PostgreSQL**, along with **NoSQL** databases like **MongoDB** for high-performance data storage.
- Wrote efficient server-side code using **Java** and **Spring** to handle business logic and data processing tasks and Utilized **Git** for version control to streamline source code management.
- Implemented **ORM** with **Hibernate** to optimize database interactions and query performance.
- Participated in **CI/CD** pipelines using **Jenkins** and **Docker** to automate deployment processes, ensuring consistency across environments.
- Created comprehensive documentation for **user interfaces** and **APIs**, ensuring clarity for ongoing maintenance.
- Utilized **JIRA** for issue tracking, project management, and sprint planning.
- Configured **Log4j** for efficient logging and monitoring, and used **Apache HTTP Server** to handle web traffic.
- Automated infrastructure management using **AWS CloudFormation** templates and designed serverless applications with **AWS Lambda** to reduce infrastructure overhead and created interactive dashboards using **Power BI** for actionable insights.
- Developed enterprise-level applications using **EJB**, **J2EE**, **JSP**, **JSTL**, **Custom Tag Libraries**, and **JAX-RS** for dynamic UI and **JDBC** for database connectivity.
- Built scalable **microservices** using **Spring Boot** and **Spring Cloud**, leveraging **Netflix Eureka** for service discovery and **Zuul** for API gateway management.
- Integrated third-party **APIs** into applications, enhancing functionality and enabling seamless data exchange between systems using **JAX-RS** and **RESTful services**.
- Developed unit and integration tests using **JUnit** and **Mockito**, ensuring code quality and application stability.
- Developed batch processing applications using **Spring Batch** to handle large volumes of data and ensure efficient processing.

ENVIRONMENT: HTML, CSS, JavaScript, Vue.js, RESTful APIs, Spring Boot, MySQL, PostgreSQL, MongoDB, Spring, Git, ORM, Hibernate, CI/CD, Jenkins, Docker, JIRA, Apache HTTP Server, AWS CloudFormation, AWS Lambda, Power BI, Spring Cloud, JAX-RS, Junit, Mockito, Spring Batch.

Nationwide Mutual Insurance Company **Java Full Stack Developer**

Columbus, Ohio
Jan 2024 – Dec 2024

Description: Nationwide Mutual Insurance Company is a prominent American insurance and financial services company. Involved in designing, developing, and maintaining both the front-end user interface and back-end server logic of banking applications using Java technologies, including building robust APIs, managing databases, ensuring secure transactions.

Responsibilities:

- Developed and maintained core insurance applications for **Nationwide Mutual Insurance** using **Java**, **Spring Boot**, and **Hibernate**, ensuring seamless integration and efficient backend services for the company's insurance and financial solutions.
- Designed and developed responsive, user-friendly interfaces for customer-facing applications using **React.js**, **HTML5**, **CSS3**, and **Bootstrap**, enhancing user experience for services like policy management, claims processing, and account access and designed and implemented **RESTful APIs** and **SOAP web services** to integrate Nationwide's internal systems with third-party platforms for smooth transaction processing and data exchange.
- Worked with **MySQL**, **PostgreSQL**, and **MongoDB** to manage and optimize large-scale insurance data, ensuring efficient storage and retrieval of policy details, claims records, and customer information.
- Implemented secure authentication and authorization mechanisms using **OAuth 2.0**, **JWT**, and **LDAP**, ensuring data protection and secure access control for Nationwide's digital platforms.
- Utilized **Kafka** and **RabbitMQ** for real-time communication between different modules of insurance applications, ensuring smooth data synchronization and maintaining transactional integrity across services.
- Wrote unit tests using **JUnit** and mocked dependencies with **Mockito** to ensure code reliability, reduce defects, and maintain high-quality standards for Nationwide's software systems.
- Collaborated with **DevOps** teams to implement **CI/CD pipelines** using **Jenkins**, **Docker**, and **Kubernetes**, ensuring automated and streamlined deployment processes for Nationwide's financial and insurance applications.
- Developed real-time dashboards and reporting tools using **React.js**, **Chart.js**, and **D3.js**, presenting key financial and insurance metrics for decision-makers and configured
- Monitored application performance and availability using **Prometheus** and **Grafana**, ensuring critical systems were always operational and available to customers and Automated backend data processing and reporting tasks using **Python** scripts, reducing manual interventions and optimizing operational workflows within Nationwide's financial systems.
- Worked with QA teams to validate the functionality of insurance applications using **Selenium** and **Cypress**, ensuring smooth production releases with no critical issues.
- Developed advanced reporting and analytics features for Nationwide's financial services using **Power BI** and **Tableau**, providing actionable insights for improved decision-making and performance tracking.
- Implemented cost-effective and high-performance cloud solutions by leveraging **AWS Lambda** for serverless technologies, enhancing operational efficiency and reducing infrastructure costs for Nationwide's services.

ENVIRONMENT: Java, Spring Boot, Hibernate, Angular, React.js, HTML5, CSS3, Bootstrap, RESTful APIs, SOAP web services, MySQL, PostgreSQL, MongoDB, OAuth 2.0, JWT, LDAP, Kafka, RabbitMQ, Junit, Mockito, DevOps, Jenkins, Docker, Kubernetes, AWS, Prometheus, Grafana, Python, Selenium, Cypress, AWS Lambda, Power BI.

Central Bank of India **Java Developer**

Mumbai, India
Oct 2021 – Aug 2022

Description: Central Bank of India is one of the oldest and largest public sector banks provides a wide range of banking services to individuals, businesses, and government entities. Maintained software after deployment, including updating it and providing ongoing support and designing, developing, and maintaining software for insurance platforms and involved in testing, troubleshooting, and providing support for the software.

Responsibilities:

- Developed new front-end applications from scratch using **HTML5**, **CSS3**, **JavaScript**, **jQuery**, **Bootstrap**, **AngularJS**, and **NodeJS**, providing modern and responsive user interfaces for **Central Bank of India** digital banking solutions.

- Utilized **Java 8 Streams** and **Lambda expressions** to efficiently store and process banking data, improving overall application performance. Configured and managed **gulp tasks** in **NodeJS** runtime for handling CSS pre-processing, minifying, test-running, and building-sync to streamline the development workflow.
- Developed custom **directives**, **factories**, and **services** in **AngularJS**, adhering to coding standards and creating isolated **AngularJS controllers** to manage data operations within scopes. Extensively used core **Java** features such as **exceptions** and **collections** to ensure efficient handling of banking operations and data structures.
- Consumed **RESTful web services** using **NodeJS**, **AngularJS**, and **jQuery**, leveraging **JSON parsing** and implementing **AJAX** calls for real-time data updates in the user interface.
- Designed and developed a framework to consume **web services** hosted in **Amazon EC2** instances, integrating with **Central Bank's** backend systems.
- Experienced with event-driven and scheduled **AWS Lambda** functions to trigger various **AWS resources**, enabling dynamic processing of financial data and experienced in implementing **Microservices** and **SOA** using **SOAP** and **UDDI** web services, following **Top-Down** and **Bottom-Up** approaches for efficient service orchestration
- Developed real-time data synchronization between **MongoDB** and traditional **SQL databases** using **Apache Kafka**, enabling faster processing of transactional data in **Central Bank's** financial systems.
- Enhanced **CI/CD pipelines** using **Jenkins** for automated deployments, resulting in quicker feature rollouts and better version control across banking applications.

ENVIRONMENT: HTML5, CSS3, JAVASCRIPT, jQuery, Bootstrap, AngularJS, NodeJS, AWS, Micro Services, SOA, Lambda, EC2, AWS SDK, Amazon S3 buckets, MYSQL, AWS Glacier, AWS SQS, MongoDB, Apache Kafka, CI/CD pipeline, Jenkins.

Tata Communications

Mumbai, India

Java Developer

June 2020 – Sep 2021

Description: Tata Communications is a global telecommunications and digital services company. Involved in writing clean, efficient, well-documented code and debugging and troubleshooting the program and analysing user requirements, testing software, resolving issues and ensuring the smooth functioning of the programs in the back-end and front-end.

Responsibilities:

- Developed and maintained enterprise-grade **applications using Java 8+**, ensuring high performance and scalability to meet **Tata Communications'** business requirements and designed and implemented **RESTful APIs using Spring Boot** to enable seamless integration between internal systems and third-party services.
- Utilized **Microservices Architecture** to build scalable, distributed systems, improving modularity and simplifying future maintenance and Developed **ORM mappings using Hibernate** and optimized database operations through **JPA** for enhanced performance and data integrity.
- Created dynamic front-end interfaces using **Angular** and **ReactJS**, focusing on user-centric application modules to improve customer experience and Wrote **unit tests using JUnit and Mockito** to ensure the reliability and stability of the software.
- Configured and managed **Jenkins pipelines for CI/CD**, streamlining the build, test, and deployment processes for faster product releases and Enhanced **data processing pipelines using Apache Spark** to handle high-volume data efficiently for analysis and reporting and Integrated **NoSQL databases such as MongoDB and Cassandra** to handle unstructured and semi-structured data, providing flexibility for varied data types and Orchestrated and managed **containerized applications using Kubernetes**, ensuring high availability, scalability, and efficient resource utilization.
- Utilized **Redis for caching** to reduce response times and alleviate database load, ensuring a smoother user experience.
- Ensured secure communication across applications by implementing **SSL/TLS encryption** and integrating **OAuth 2.0** for robust API security. Automated deployment processes using **Ansible**, improving deployment speed, efficiency, and minimizing human error.

Environment: Java 8+, RESTful APIs, Spring Boot, Microservices Architecture, Hibernate, Junit, Mockito, Angular, ReactJS, MySQL, Oracle, Kafka, Git, Jenkins, CI/CD, Apache Spark, MongoDB, Cassandra, Kubernetes, Redis, Elasticsearch, OAuth 2.0.
