Project – CUSTOMER CHURN PREDICTION REPORT USING MACHINE LEARNING.

Professional experience

INFOSYS – Bangalore, Karnataka State, India.

07-December-2021 to 31-March-2023

Financial analyst, Jr. Accountant – Accounts payable

I was assigned to the CEVA LOGISTICS project. As a Jr. Accountant my role involves clearing different kinds of day-to-day invoices with help of different interfaces like JD Edwards, APOC, MOFS, and MEDIUS. On a regular target basis, we will get invoices from different vendors like credit note, debit note, standard invoice purchase orders, GL Coding based, Traveler invoices. We need to match the amounts on invoice with the interface. If anything doesn't match with the invoice will analyse and make the needful corrections with help of the client.

- In the short span of my tenure, I learnt a lot of things in the process. My manager recognized the work and assigned me work with different teams, like I've worked around with 9 teams across the Accounts Payable department.
- In recognition of my contributions to team efforts, I have received a certificate for Outstanding Accomplishments along with a monetary award from the client."
- Finally, it's great to work in INFOSYS.
