

VENKATESH BOPPUDI

717-877-2392 • venkyboppudi08@gmail.com

Professional Summary

Software Developer with 2+ years of experience designing, developing, and maintaining scalable, high-performance applications for enterprise environments.

Proficient in C#, ASP.NET MVC/Core, Entity Framework, SQL Server, Angular, React, and REST APIs, with hands-on experience in both front-end and back-end development.

Experienced across the full SDLC in Agile/Scrum environments, with proven expertise in database optimization, API integration, and delivering secure, user-focused solutions that drive operational efficiency and business outcomes.

Skilled in troubleshooting complex issues, optimizing application performance, and implementing best practices for maintainable and robust software.

Strong collaborator with experience working in cross-functional teams, mentoring peers, and contributing to the delivery of production-ready applications on time and within scope.

Technical Skills:

Languages & Frameworks	C#, ASP.NET Core, MVC, Angular, React, JavaScript, HTML, CSS, Python
Databases	SQL Server, MySQL, PL/SQL
Web/UI Development	Angular, React, Bootstrap, jQuery
Cloud & Hosting	Microsoft Azure, IIS
Tools & Technologies	Entity Framework, REST APIs, Web API, Git, Visual Studio, SQL Server Management Studio, JIRA
DevOps & CI/CD	Azure DevOps, GitHub Actions
Concepts & Practices	Object-Oriented Programming (OOP), Relational Database Design, Agile/Scrum, Application Support

Certifications:

Microsoft Certified: Azure Fundamentals

Microsoft Certified: .NET Fundamentals

Education:

Master's
degree
in
C
omputer information science

--- Harrisburg
University, PA,
USA
Bachelor's degree in Computer Science & Engineering ---
RGUKT, AP
,INDIA

Professional Experience:

MUV Technologies Ltd – India OCT 2021 – DEC 2022

.NET DEVELOPER

Project Description:

Contributed to the maintenance and enhancement of enterprise-level web applications for internal users. Focused on improving application performance, security, and reliability, while streamlining deployments and ensuring high-quality deliverables through collaboration with QA and development teams.

Responsibilities:

Maintained and enhanced enterprise web applications using ASP.NET MVC, C#, and SQL Server.

Optimized stored procedures and queries to reduce execution time and improve performance.

Implemented role-based access control (RBAC) to ensure secure access for internal users.

Automated deployment scripts and managed version control with Git and JIRA.

Participated in code reviews and mentored junior developers to improve coding standards.

Collaborated with QA to perform integration and regression testing, ensuring application stability.

Troubleshoot and resolved technical issues to maintain high availability and performance

Environment: ASP.NET MVC, C#, SQL Server, Git, JIRA, Visual Studio

MUV Technologies Ltd – India OCT 2020 – SEP 2021

FULL STACK DEVELOPER

Project Description:

Developed and maintained full-stack web applications to streamline internal business workflows and enhance user experience. Focused on building responsive front-end components, integrating backend services, and optimizing database operations to improve system performance and efficiency. Actively participated in Agile sprints to deliver features on time with minimal defects.

Responsibilities:

Developed full-stack web applications using Angular, React, JavaScript, and SQL databases.

Built and consumed REST APIs to integrate modules, reducing manual work by 30%.

Created responsive UI components with Angular, React, Bootstrap, and JavaScript to enhance user experience.

Optimized database operations using SQL Server and MySQL, improving query performance by 20%.

Participated in Agile sprints, including daily stand-ups, sprint planning, and code reviews.

Collaborated with QA teams to ensure bug-free and stable releases.

Troubleshoot and resolved technical issues to maintain application reliability.

Environment: Angular, React, JavaScript, Bootstrap, SQL Server, MySQL, REST APIs, Git, JIRA

Academic Projects:

Project: Qnect – Online Quiz Application

Project Description:

Developed a dynamic online quiz platform enabling multi-role access and real-time scoring. Focused on creating a secure, responsive, and scalable system with both backend and frontend implementations.

Responsibilities:

Designed and implemented backend APIs for user registration, quiz creation, and scoring.

Developed a responsive frontend using React, ensuring smooth user interactions and cross-device compatibility.

Implemented role-based access control (Admin, Teacher, Student) for secure multi-level access.

Optimized application performance, database queries, and frontend responsiveness for scalability.

Environment: ASP.NET Core, C#, React, SQL Server, REST APIs, Bootstrap, JavaScript

Project: Wildlife Habitat Connectivity Simulation**Project Description:**

Designed and implemented a simulation platform to study wildlife movement across fragmented habitats, focusing on ecological connectivity and least-cost path analysis using graph algorithms.

Responsibilities:

Developed simulation algorithms using Python and applied graph theory and Dijkstra's algorithm to model animal movement.

Analyzed spatial data and generated outputs to support research on habitat fragmentation and species migration patterns.

Collaborated with academic research teams to provide actionable insights and validate simulation results.

Environment: Python, Graph Theory, Dijkstra's Algorithm, Spatial Data Analysis, Pandas, NumPy
