

SUMMARY

Data Analyst with 5 years of experience in healthcare and enterprise reporting. Skilled in **SQL, Power BI, Python, and ETL pipelines** for reporting automation and data transformation. Strong background in healthcare analytics, predictive modeling, and compliance. Hands-on with **Snowflake, dbt, BigQuery, and cloud data platforms**.

CORE COMPETENCIES

SQL | Power BI | Python | Tableau | Snowflake | dbt | BigQuery | Azure Synapse | AWS Redshift | Data Warehousing | Dashboard Optimization | KPI Development | Ad hoc Reporting | Business Requirements Gathering | Predictive Analytics | HIPAA Compliance

SKILLS

- **Data Languages & Tools:** SQL (Advanced – CTEs, Window Functions, Optimization), Python (Pandas, NumPy, Matplotlib, scikit-learn), R
- **Visualization & BI:** Power BI (DAX, Row-Level Security, Paginated Reports, Dashboard Optimization), Tableau, Excel (PivotTables, Power Query, Macros)
- **ETL & Transformation:** Azure Data Factory, SSIS, dbt, Informatica
- **Cloud & Databases:** Snowflake, BigQuery, Azure Synapse, Azure Databricks, AWS Redshift, SQL Server, Oracle, MySQL, PostgreSQL
- **Data Governance & Quality:** Data Modeling (Star/Snowflake schema), Data Warehousing, Data Cleansing, Data Validation, HIPAA Compliance, Audit Reporting
- **Version Control:** Git, GitHub
- **Statistical & Predictive Analytics:** Forecasting, A/B Testing, Regression, Clustering, Predictive Analytics, Data Mining
- **Project Management Tools:** JIRA, Confluence, Agile methodology

EXPERIENCE

Humana, USA | Data Analyst | Jan 2024 - Present

- Designed and maintained **Power BI dashboards** to track care plan adherence, appointment follow-ups, and high-cost claim categories, reducing manual reporting efforts by 35% and improving dashboard usability through optimization.
- Built **SQL queries** in **Azure Synapse** and **Snowflake** to aggregate claims and eligibility data, improving provider performance reporting turnaround by 25%.
- Developed and managed **Azure Data Factory** and **dbt** pipelines to automate ingestion and transformation of pharmacy partner files, cutting data availability delays from 24 hours to near real-time.
- Conducted analyses on claim denial patterns, identifying anomalies that reduced audit investigation time by 20%; delivered population health reports (chronic care, post-discharge patients) using predictive analytics in Python, enabling care teams to close 15% more care gaps.
- Collaborated with **stakeholders** to gather business requirements for new dashboards and reports; ensured **HIPAA compliance** by applying **PHI/PII masking** in exports and maintaining audit logs with 100% adherence to security policies.

Aplus Datalytics, India | Data Analyst | Jan 2020 - Aug 2022

- Built **Power BI dashboards** to track product performance and campaign outcomes, improving executive visibility into **KPIs** by 40%.
- Wrote **SQL queries** and implemented **dbt models** to integrate sales and customer feedback data, enhancing data reliability and reducing reporting errors by 15%.
- Automated **Excel** and **Tableau** Prep workflows, cutting manual reporting effort by 60% and reducing turnaround from 10 hours to 4 hours; **used SSIS** to load flat files into **SQL Server** tables with validation logic, improving data accuracy by 20%.
- Conducted user acceptance testing and ad hoc reporting for dashboards, ensuring 100% alignment of metrics with client requirements.
- Pulled data from **AWS Redshift** and integrated it with marketing datasets, enabling cross-channel reporting and reducing data preparation time by 30%; assisted in migration planning toward **BigQuery for scalability**; partnered with **stakeholders** to gather requirements for new **KPIs** and data validation processes, strengthening decision-making support.

Fortis Healthcare, India | Data Analyst | Jul 2018 – Jan 2020

- Developed **Power BI** dashboards for admissions, discharges, and wait times, reducing manual report preparation time by 50% and supporting ad hoc reporting requests from leadership; rewrote **SQL queries** for scheduling and bed allocation reports, improving refresh speed by 40% and saving analysts 6 hours weekly.
- Standardized patient ID and procedure code reporting, which increased accuracy of operational reports by 20%; delivered **Excel**-based operational reports for administrative teams, improving decision-making speed for department heads.
- Collaborated with finance and billing teams to reconcile mismatched data, reducing billing discrepancies by 15%.
- Explored **Snowflake** adoption for centralizing patient admission and discharge data, demonstrating a 25% improvement in cross-departmental reporting efficiency; partnered with **stakeholders** to define business requirements for reporting enhancements and **KPI** development.

EDUCATION

- **Master of Science in Data Analytics Engineering, Northeastern University, Boston, MA**
