EDUCATION

University of California, Irvine

Irvine, CA

Bachelor of Science in Computer Science | GPA: 3.698/4.0

Sept. 2020 – June 2024

Relevant Courses

Data Structure Implementation & Analysis, Introduction to Data Management, Project in Databases and Web Applications

PROJECTS

Job Tech Stack | *React, ExpressJS, NodeJS, MongoDB, ChartJS, Axios, Vercel, Clerk* Nov. 2024 - May 2025

- Engineered a full-stack web application to parse job descriptions and extract technical keywords (e.g. Java, SQL, React), store structured data in MongoDB for efficient analytics.
- Developed a responsive React UI that uses Chart.js to render a keyword-frequency pie chart and a time-series graph tracking application volume.
- Built a Node.js/Express API layer to handle text parsing, secure client-server communication (Axios), and CRUD operations against MongoDB.
- Leveraged Vercel's serverless functions and Clerk's authentication service for seamless user sign-in, achieving auto-scaling and 99.9% uptime

To-Do List Application | *Java, JavaScript, React, NodeJS, MongoDB, Spring Boot* July - Sept. 2024

- Architected a modular to-do list app with Spring Boot backend exposing RESTful endpoints and MongoDB persistence.
- Implemented full CRUD functionality (create/read/update/delete) and session-based user authentication, enhancing task management reliability.
- Constructed a React frontend with dynamic components that update in real time on user interaction.
- Deployed backend on Railway and frontend on Vercel, ensuring CI/CD integration and zero-downtime updates.

Fabflix Movie Database Web Application | *Java, JavaScript, AWS, jQuery, Tomcat* Sept. - Dec. 2023

- Fully built architecture from end-to-end that can perform all features under 500 milliseconds. Coordinated with a colleague to set up AWS instance, MySQL, Tomcat, imported a large database of movie information, and created a new GitHub repository for version control.
- Created about ~25 medium features, e.g. fully functional website that displays a catalog of 1000s of movies, cart checkout backed by sessions, secure login using SHA256 hashing and sessions, full-text search and auto-complete backed by a cached, bot detection using reCAPTCHA, protection against SQL injection attacks via Prepared Statements, scaled website by implementing optimization including MySQL connection pooling, MySQL replication, and Apache load balancing.
- Optimized server performance via JDBC connection pooling, primary-secondary MySQL replication (44% JDBC increase), and Apache load balancing (24% query speed)
- Designed an ETL pipeline to ingest and validate 5 MB+ XML data files, expanding the movie database with zero downtime.

TECHNICAL SKILLS

Languages & Databases : Java, Python, JavaScript, MySQL, PostgreSQL, MongoDB, NoSQL

Frameworks & Libraries: React, Express.js, Node.js, Next.js, Chart.js, Axios, jQuery, Spring Boot, Django, Tailwind CSS

DevOps & Tools: Git, Github, Maven, AWS (EC2), Railway, Vercel, Tomcat, JMeter, JUnit

APIs & Architecture: RESTful APIs, Microservices, Clerk Authentication, MVC
