

Vidavaluru John Kamal Cloud Engineer

Johnkamalv@gmail.com | (940) 299-6867 | USA | LinkedIn

Summary

Cloud Engineer with 4 years of experience designing, automating, and securing cloud infrastructure across AWS and Azure. Skilled in Infrastructure as Code (Terraform, Bicep, CloudFormation), automation with Python and Bash, and implementing cloud security and compliance frameworks (SOC2, PCI-DSS, RBI). Proven success in optimizing costs, improving deployment speed, and enhancing operational efficiency using DevOps tools, monitoring platforms, and policy-as-code to deliver scalable, reliable, and secure cloud solutions.

Technical Skills

- **Cloud Platforms:** AWS (EC2, VPC, RDS, IAM, S3, Transit Gateway, Organizations, Control Tower, CloudTrail, AWS Config, SNS), Azure (Azure Policy, Security Center, Defender for Cloud, AD Privileged Identity Management, Purview, Resource Graph Explorer, Event Grid, Azure Functions, App Services, SQL Databases, Storage)
- **Infrastructure as Code:** Terraform, AWS CloudFormation, Azure Bicep, ARM Templates
- **Scripting & Automation:** Python, Bash, Azure Functions, Logic Apps, GitHub Actions
- **DevOps Tools:** Azure DevOps Pipelines, Git (Version Control), Jira Service Management, Confluence
- **Security & Compliance:** SOC2, PCI-DSS, RBI Guidelines, Policy-as-Code, Role-Based Access Control (RBAC), MFA, Just-In-Time Access
- **Monitoring & Logging:** CloudWatch, Azure Sentinel, Amazon OpenSearch, Activity Logs

Professional Experience

Cloud Engineer, Zelle

10/2024 – Present | Remote, USA

- Worked on the design and implementation of a centralized cloud infrastructure platform to support Zelle's internal engineering teams across development, staging, and production environments in AWS.
- Architected and automated multi-account AWS environment setup using AWS Organizations, Control Tower, and Service Control Policies (SCPs), improving security posture and account scalability.
- Built reusable Infrastructure as Code (IaC) modules using Terraform and AWS CloudFormation to provision VPCs, EC2, RDS, IAM roles, and S3 buckets, reducing environment setup time by 70%.
- Implemented AWS Transit Gateway and VPC Peering for secure inter-account networking, supporting cross-environment communication and reducing latency by 25% between services.
- Developed custom automation scripts in Python and Bash to perform tasks such as AMI baking, auto-tagging, and resource cleanup, which cut down operational overhead and ensured compliance.
- Integrated CloudWatch, CloudTrail, and AWS Config with centralized logging and alerting using Amazon OpenSearch and SNS, enabling real-time auditability and performance monitoring.
- Reduced monthly AWS spend by 40% through cost optimization strategies including automated instance scheduling, right-sizing, and implementing S3 lifecycle policies for cold data.

Cloud Engineer, Ameriprise India

01/2022 – 12/2023 | Andhra Pradesh, India

- Crafted an automated cloud security framework to meet SOC2, PCI-DSS, and RBI guidelines for financial data by collaborating with InfoSec, Risk, and DevOps teams through requirement gathering sessions and maintaining detailed project documentation.
- Implemented Azure Policy, Security Center, and Defender for Cloud to enforce compliance across 100% of cloud workloads using policy-as-code with Terraform and monitored configuration drift via Azure Resource Graph Explorer.
- Deployed Azure Sentinel and Activity Logs for real-time threat detection and continuous security monitoring integrated into centralized dashboards using Logic Apps for automated alerting and incident notifications.
- Automated IAM provisioning using Azure AD Privileged Identity Management enforcing role-based access control with just-in-time permissions and multifactor authentication improving overall cloud security posture by 60%.
- Created custom Python scripts and Azure Functions triggered by Event Grid to automatically remediate 80% of policy violations such as exposed endpoints and unencrypted storage and managed deployment pipelines using GitHub Actions.
- Led quarterly compliance audits with InfoSec using Azure Purview and team up closely with audit teams while documenting workflows and architecture diagrams in Confluence and reducing incident response time by 50% via Jira Service Management automation.

Associate Cloud Engineer, Ameriprise India

01/2021 – 12/2021 | Andhra Pradesh, India

- Supported a cloud enablement initiative for Ameriprise's client onboarding platform by developing automated Azure infrastructure using Bicep and ARM templates for standardized deployments on multiple environments within regulatory and compliance frameworks.
- Built and maintained Azure DevOps pipelines to streamline deployment of App Services, SQL databases, and storage resources, which improved deployment speed, minimized configuration errors, and aligned infrastructure delivery with internal DevSecOps practices.
- Worked with QA and InfoSec teams to validate infrastructure templates, implemented Git-based version control for traceability, and reduced manual deployment time by 70% while maintaining consistency across development, staging, and production environments.

Education

Master of Science in Information Technology Management

01/2024 – 04/2025

Belhaven University, Jackson, MS, USA

Bachelor of Technology in Electronics and Communication Engineering

08/2017 – 08/2021

Narayana Engineering College, Nellore, Andhra Pradesh, India

Certificates

National Workshop on Android Controlled Robot -NWACR 2018

Printed Circuit Boards Design and Fabrication (PCB) -2019

National Level Student Technical Symposium -2019
