

Education

University of Arizona, Tucson

2023 – 2025

Master of Science in Data Science,

Relevant Coursework: Data Analysis and Visualization, Data Mining, Neural Networks, Artificial Intelligence, Applied NLP

Sri Venkateswara college of Engineering

2019 – 2023

Bachelor of Technology in Information Technology

Skills

Python | R | SQL | Statistics | Data Analytics & Visualization (Power BI, Tableau, MS Excel) | AI, Machine Learning & Deep Learning (TensorFlow, PyTorch, Scikit-learn, Keras, RAG, GraphRAG, CNN, RNN, LSTM) | NLP | Computer vision | Docker | Pandas | NumPy | Matplotlib | Big Data & ETL (Hadoop, PySpark) | Snowflake | Databricks | AWS | Azure | JIRA | Git | Data Storytelling | Problem-Solving | Stakeholder Alignment | Research & Technical Writing | Communication

Experience

RADICAL AI

Dec 2023 – Oct 2024

AI INTERN

NY (Remote), USA

- Developed and deployed a customer support chatbot using OpenAI API and Google Gemini, improving response efficiency by 20 percent. Conducted exploratory data analysis (EDA) and optimized data preprocessing pipelines, leveraging Snowflake-based data warehouses. Designed ETL workflows, ensuring data accuracy and quality for large datasets, and conducted A/B testing to validate solution effectiveness. Enhanced user satisfaction metrics by 30 percent through prompt engineering and performance-driven adjustments. Collaborated with cross-functional teams, analyzing user interactions to drive iterative improvements in AI-driven customer support

E-SOFT TECHNOLOGIES

Dec 2021 – Feb 2022

FRONT END DEVELOPER INTERN

Chennai, India

- Developed user-friendly e-commerce web interfaces using HTML, CSS, and JavaScript, ensuring cross-device compatibility. Implemented feedback-driven enhancements to improve navigation and accessibility, optimizing the user experience (UX). Collaborated with designers to integrate modern UI/UX design elements and performance optimizations, boosting user engagement.

Projects

ML and Transformer Models for Text Classification:

- Developed traditional ML models (Random Forest, Logistic Regression) and transformer-based models (BERT, RoBERTa) for text classification. Utilized the Stanford Natural Language Inference (SNLI) dataset and evaluated performance using accuracy, precision, recall, and F1-score. Implemented traditional models with TF-IDF features and fine-tuned transformer models using Hugging Face.

AI-Driven Visual Damage Classifier for Insurance Claims:

- Developed a GenAI-enhanced image analysis pipeline to automate damage assessment for an insurance company. Used computer vision models (TensorFlow, OpenCV) to detect and classify structural damage in claim images. Integrated generative AI to enhance low-quality or incomplete images for better evaluation and feature extraction. Reduced manual inspection time by 50 percent and improved damage classification accuracy by 30 percent. Streamlined the claims processing workflow, resulting in faster and more accurate settlements.

Financial Data Analysis - Fraud Detection:

- Developed a fraud detection system by analyzing bank transactions to identify suspicious activities using anomaly detection algorithms like Isolation Forest. Built an SQL-based reporting system to track financial KPIs and detect fraud trends, enhancing real-time monitoring through Tableau dashboards. Improved fraud detection accuracy by 15 percent through feature engineering and optimized data preprocessing pipelines. Automated fraud case categorization using NLP-based entity recognition in Python, reducing manual review time by 30 percent.
