PROFESSIONAL SUMMARY

Azure certified Data Engineer with 3+ years of experience architecting and implementing scalable batch and streaming data pipelines across Azure and GCP platforms. Proven track record of reducing ETL execution time by 40%, automating 75% of manual data processes, and cutting dashboard latency by up to 50%. Skilled in DBT, PySpark, Power BI, and dimensional modeling (Star/Snowflake) with a strong focus on delivering business-impacting analytics solutions and operational efficiencies.

WORK EXPERIENCE

Data engineer | Barclays

Jan 2024 - Present

- Designed and orchestrated scalable data pipelines using **Azure Data Factory** and **Databricks**, reducing data processing latency by 40% and supporting 1TB+ monthly data volumes.
- Modeled complex source data into Star and Snowflake schemas using **DBT**, improving reporting performance and enabling faster self-service BI.
- Built 10+ modular DBT models to unify KPIs across Finance and Operations, leading to a 25% reduction in reporting inconsistencies.
- Integrated **ERP and CRM** platforms via **REST APIs**, automating 75% of data synchronization workflows and eliminating ~30 hours/month of manual effort.
- Engineered robust error handling, logging, and alerting for pipelines, cutting incident response times by over 50%.
- Optimized **Power BI** dashboards (200+ users) with **DAX** and visual performance tuning, reducing average load time from 6s to 4s.
- Enabled feature engineering for Machine Learning models by preparing and enriching data using **PySpark** and **Delta Lake** in Databricks.
- Supported real-time and batch ingestion workflows via Delta Lake, handling both structured and semi-structured data formats.
- Spearheaded implementation of **CI/CD pipelines** for DBT and ADF workflows, improving release reliability and deployment efficiency by 35%.

Programmer analyst | Cognizant

Mar 2022 - Aug 2022

- Built **ETL** pipelines to load HDFS from raw sources, reducing ingestion latency by 25% for a retail analytics platform managing 10M+ daily transactions.
- Leveraged **Hadoop ecosystem (MapReduce, Hive, Pig)** to process large datasets, enabling faster reporting on sales and inventory trends.
- Wrote optimized MapReduce programs in Java to support scalable processing of customer purchase behavior data.
- Migrated data workflows to Azure using **Informatica PowerCenter**, improving data reliability and minimizing downtime during cloud transition.
- Developed interactive Power BI dashboards for real-time KPI tracking, enhancing visibility for operations and marketing teams.
- Integrated multiple data sources (HDFS, Hive, SQL Server) into unified reports in Power BI, improving reporting turnaround by 30%.
- Collaborated with agile teams to define sprint deliverables and improve ETL development velocity through better requirement alignment.

Jr. Data Engineer | Trident engineers

April 2020-Mar 2022

- Designed and maintained real-time and batch pipelines using **Google Cloud Dataflow**, **Apache Beam**, **BigQuery** to support operational analytics.
- Processed 500K+ records from CSV, JSON & BigQuery sources using **Pandas** to identify cost-saving trends, boosting operational efficiency by 15%.
- Built incremental loading strategies in BigQuery that reduced unnecessary data refreshes, cutting query costs and improving report freshness.
- Developed Power BI dashboards with drill-through analytics and custom visuals to track data pipeline performance and SLA compliance.
- Improved PySpark-based transformation jobs to handle large data volumes with enhanced error handling and retry mechanisms.
- Tuned complex **SQL** queries in BigQuery, reducing dashboard latency in Looker Studio and BI tools by up to 50%.
- Documented data lineage and transformation logic for internal teams, reducing onboarding time for new engineers by 40%.

TECHNICAL SKILLS

Programming Languages: Python(pandas, matplotlib, numpy), SQL, Java, Scala

Data Engineering & ETL: Azure Data Factory, DataBricks, Data Build Tool(DBT), Informatica, Apache Spark, Hadoop, PySpark, Kafka, NoSQL

Data Architecture & Modeling: Dimensional Modeling (Star/Snowflake), DBT, Entity Relationship Diagrams (ERDs), Data Vault

Data Warehousing and Visualization: Big Query, Snowflake, Azure Synapse Analytics, Power BI, Tableau, Python(pandas, matplotlib)

Cloud Platforms and infra: Microsoft Azure(DP-203 certified), AWS, Google Cloud Platform

Tools : Git, REST Api, Airflow, Microsoft Excel

CERTIFICATIONS

- Microsoft azure data engineer associate (DP-203)
- Databricks certified Spark Developer Associate

PROJECTS

End-to-End Azure Data Engineering Project (Personal Project)

Tools: Azure Data Factory, Azure Data Lake Storage Gen2, Azure Databricks (PySpark), Azure Synapse Analytics, Power BI

- Designed & implemented a complete **data pipeline architecture** to analyze sales data across regions, SKUs & time periods, handling 1M+ records
- Ingested raw CSV data from simulated external sources using **Azure Data Factory**, enabling scheduled data pulls and automated triggers.
- Stored raw and curated data layers in **Azure Data Lake Gen2**, following best practices for folder hierarchy and access control via RBAC.
- Transformed semi-structured and structured data using **Azure Databricks (PySpark)** to build clean, analytics-ready datasets.
- Created **Star schema models** in **Azure Synapse Analytics**, optimizing data warehouse performance for ad-hoc querying and BI consumption.
- Connected Power BI to Synapse and developed **interactive dashboards** for sales trends, inventory analysis, and regional performance KPIs.
- Delivered a complete solution independently, demonstrating expertise in Azure cloud data engineering and full-lifecycle pipeline development.

EDUCATION

Master's in Computer Sciences at **The University of Texas at Arlington**, 2024

Arlington, Texas

Bachelors in Computer Sciences at **Jawaharlal Nehru Technological University**, 2022

Hyderabad, India
