

PROFESSIONAL SUMMARY:

- Experienced **Data Analyst** with over 5 years of hands-on expertise in **data analysis, financial reporting, and business intelligence**, delivering insights across domains including higher education, telecom, and enterprise technology.
- Designed and developed **interactive dashboards** and reports using **Power BI, Tableau, and Excel (Pivot Tables, Power Query, VBA)** to monitor financial KPIs, operational performance, and business trends across 25+ departments.
- Proficient in writing and optimizing **SQL (T-SQL, PL/SQL)** queries within **Microsoft SQL Server, PostgreSQL, MySQL, and SSMS** for data extraction, transformation, and financial analysis.
- Applied **Python (Pandas, NumPy)** for data wrangling, real-time analytics, and process automation; used in key projects such as EV Charging Tracker integration with **Firestore**.
- Built and maintained **ETL pipelines** using tools such as **Talend, Apache Airflow, SSIS, and SQL**, streamlining reporting processes and reducing manual effort across business operations.
- Conducted **statistical analysis** including **regression, forecasting, and A/B testing** to identify cost-saving opportunities, evaluate business trends, and support strategic planning.
- Worked with **big data ecosystems** including **Hadoop, Spark, and Hive** to process and analyze large-scale datasets, improving model accuracy and performance efficiency.
- Developed financial models and planning frameworks using **Anaplan**, enhancing scenario planning and budgeting accuracy in enterprise environments.
- Experienced in **data validation, data cleaning**, and implementing data quality checks to ensure report accuracy and regulatory compliance.
- Contributed to application development and system integration using **C#/.NET** and supported backend architecture for event and financial systems.
- Utilized **Git** for source control and participated in **CI/CD pipeline** deployments to maintain consistency and reliability in analytical tool updates.
- Worked in **Agile environments**, collaborating with cross-functional teams to deliver data-driven solutions aligned with organizational goals.
- Certified **Anaplan Level 2 Model Builder** and **Microsoft Certified Power BI Data Analyst Associate**, demonstrating advanced proficiency in data modeling and visualization.

TECHNICAL SKILLS:

- **Data Analysis & Visualization:** Power BI, Tableau, Excel (Pivot Tables, Power Query, VBA), Looker, Google Data Studio, Matplotlib, Seaborn
- **Programming & Query Languages:** SQL (T-SQL, PL/SQL), Python (Pandas, NumPy, Matplotlib, Seaborn), R, DAX, Shell Scripting
- **Databases & Big Data:** Microsoft SQL Server, MySQL, PostgreSQL, Snowflake, Redshift, BigQuery, Hadoop, Spark, Hive, SSMS
- **ETL & Data Management:** Talend, SSIS, Apache Airflow, Informatica, Data Cleaning, Data Wrangling, Data Validation, Anaplan, dbt
- **Statistical & Analytical Techniques:** Regression, Hypothesis Testing, Time Series Analysis, Forecasting, A/B Testing, ANOVA, Clustering, PCA, Correlation Analysis
- **Cloud & DevOps Tools:** AWS (S3, RDS, Lambda), Azure (Data Factory, Synapse), GCP (BigQuery), Docker, Jenkins, Git, GitHub Actions
- **Collaboration & Methodologies:** Agile, Scrum, Confluence, Notion, Git, JIRA, Trello, Slack
- **Other Tools & Platforms:** Microsoft Access, SAP, Salesforce Analytics, ServiceNow Reporting, Alteryx, Power Automate

CERTIFICATION:

- **Anaplan Level 2 Model Builder - Wipro**
- **Microsoft Certified Power BI Data Analyst Associate**

PROFESSIONAL EXPERIENCE:

Client: Northern Arizona University
Role: Financial Assistant & Operational Support

Aug 2024 – May 2025

Responsibilities:

- Designed, maintained, and enhanced interactive **Power BI dashboards** to monitor financial performance and operational KPIs across 25+ departments, significantly improving transparency and strategic planning.
- Developed and optimized **complex SQL queries** and **SSMS-based ETL workflows** for data cleaning, validation, and automation of monthly financial reports, enhancing efficiency and reducing manual errors.
- Applied **Python (Pandas, NumPy)** to perform **data wrangling, real-time analysis, and data extraction** from an **EV Charging Tracker**, integrating with **Firebase** for centralized cloud storage and dashboarding.
- Led backend integration efforts using **Microsoft SQL Server**, managing **data pipelines** and supporting **web-based systems** for event scheduling and finance tracking via **C#/.NET**.
- Utilized **Excel (Pivot Tables, Power Query)** to supplement financial dashboards, ensuring consistent formatting and enabling dynamic reporting for business users.
- Employed **Git** for source control and version management, participating in **CI/CD pipeline deployment** for application updates and reporting modules.
- Collaborated cross-functionally with campus departments using **Agile methodology**, ensuring timely project delivery and alignment with stakeholder requirements.
- Contributed to automation of **data workflows** and improved **data quality controls**, supporting **data-driven decision-making** across dining and campus operations.

Client: Northern Arizona University
Role: Financial Assistant

May 2023 – May 2024

Responsibilities:

- Developed and maintained **Power BI dashboards** to deliver key financial metrics and spending trends for 25+ campus units, driving data-backed decision-making and boosting operational efficiency by 30%.
- Built robust **ETL pipelines** for financial reporting by cleaning, validating, and transforming datasets using **SQL queries** within **SSMS**, and enhanced reporting workflows through **Excel (Pivot Tables, Power Query, VBA)** for consistency and automation.
- Automated the extraction and integration of **SAP financial datasets** into **SQL Server**, reducing monthly report generation time by 40% and eliminating manual data handling.
- Conducted **statistical analysis** using **regression, trend forecasting, and variance analysis** to identify cost-saving opportunities in vendor contracts and operational expenses.
- Created **data validation mechanisms** to ensure accuracy in reports used by finance and audit teams, aligning with internal compliance and audit standards.
- Applied **data wrangling techniques** to harmonize financial datasets and produce high-quality visualizations, enabling stakeholders to extract insights from multi-source data.
- Worked closely with internal teams to support **BI and data governance initiatives**, promoting a culture of data-driven operations within the finance division.

Client: Wipro Limited, India.
Role: Data Analyst - Project Engineer

December 2021 – December 2022

Responsibilities:

- Led the development and optimization of **financial forecasting and budgeting models** using **Anaplan**, resulting in improved planning accuracy and faster turnaround in scenario analysis.
- Designed and deployed **dynamic dashboards** and **multi-layered reports** in **Power BI** and **Tableau**, translating complex KPIs and operational data into visual insights for senior leadership.
- Orchestrated **end-to-end ETL workflows** involving **data extraction, transformation, and loading** using **Talend, Apache Airflow, and Python (Pandas, NumPy)** to streamline real-time reporting.
- Utilized **SQL (T-SQL, PL/SQL)** for querying large data sets, optimizing performance, and integrating disparate data sources across **Microsoft SQL Server, Snowflake, and PostgreSQL**.
- Performed large-scale data processing and batch analytics using **Hadoop, Spark, and Hive**, incorporating **PySpark** and **Python-based pipelines** for trend detection and segmentation.

- Conducted advanced statistical modeling including **regression analysis**, **hypothesis testing**, **time series forecasting**, and **clustering**, using libraries like **Statsmodels**, **SciPy**, and **scikit-learn**.
- Collaborated across multi-disciplinary teams using **Agile methodology** with **Jira**, managed version control using **Git**, and deployed solutions through **Azure** and **AWS** cloud platforms.
- Developed and implemented **data validation scripts**, ensuring accuracy and reliability of critical datasets used in executive dashboards and financial models.
- Automated recurring data reporting tasks and integrated **VBA in Excel** for custom solutions, improving team efficiency by over 25%.

Client: Reliance Communications, India.

December 2019 – December 2021

Role: Data Modeler - Data Analyst

Responsibilities:

- Collaborated with business stakeholders to gather and analyze requirements, translating them into **technical specifications**, **ER diagrams**, and **data models** tailored for telecom analytics.
- Designed and maintained **dimensional data models** and **star schemas** to support analytics use cases including **customer churn analysis**, **usage behavior patterns**, and **market segmentation**.
- Built interactive and drill-down **region-wise dashboards** using **Power BI**, **Looker**, and **Excel (Power Query, Pivot Tables)** to enable leadership to make data-driven decisions.
- Utilized **SQL** and **Python (Pandas)** for **data wrangling**, **data cleaning**, and feature extraction, enhancing model accuracy and ensuring consistent reporting logic.
- Conducted **A/B testing**, **trend analysis**, and **comparative performance reporting** to evaluate product performance and identify high-risk customer cohorts.
- Executed **data validation frameworks** to ensure accuracy, consistency, and integrity of incoming and historical datasets across various systems.
- Worked closely with development and QA teams to implement and test **ETL pipelines** using **SSIS** and validated data against business rules.
- Supported data integration efforts across multiple relational databases including **MySQL** and **PostgreSQL**, enabling a unified view of KPIs across business units.
- Participated in agile sprints, documented progress in **Jira**, and collaborated cross-functionally to deliver timely and high-quality analytical solutions.

EDUCATION:

MS Computer Science

Northern Arizona University, Arizona

May 2024

ACADEMIC PROJECTS

- **Appointment Booking Management System – Testing:** Performed functional, regression, and automated testing using Selenium, pytest, and Jenkins CI/CD; managed UAT with Git and Jira.
- **Large Scale Data Structures for Genome Analysis:** Optimized hash tables, tries, and suffix trees in Python/C++ to improve genome search efficiency and large-scale data processing.
- **Formatting & Optimization for Business Analytics:** Automated ETL and reporting using Microsoft Access, SQL, R, and Excel Macros to enhance data quality and predictive analysis.

BTech Electronics and Communication Engineering

Vignana Bharathi Institute of Technology, India

May 2021

ACADEMIC PROJECTS

- **Manhole Safety and Monitoring System:** Designed a real-time manhole monitoring system using Arduino and RTOS with ultrasonic and pressure sensors for fault detection and safety alerts.
- **Intelligent Obstacle Detection System:** Built an obstacle detection system on Raspberry Pi using Python, ultrasonic sensors, and sensor fusion techniques for real-time navigation feedback.
- **Smart Real-Time Parking Monitoring Platform:** Developed an IoT-based smart parking system using Arduino, ESP32, and MQTT/HTTP protocols for automated access control and real-time updates.
