## Data Engineer

kbhaskarreddy840@gmail.com | (972) 677-9189 | USA | [www.linkedin.com/in/bhaskarreddy-komireddy/](http://www.linkedin.com/in/bhaskarreddy-komireddy/)

### SUMMARY

- Seasoned Data Engineer with extensive 4+ years of experience in designing and implementing scalable, high-performing data pipelines and architectures
- Proficient in leveraging a wide range of modern data technologies, including Hadoop, Spark, Kafka, and cloud platforms (AWS, Azure, GCP), to deliver data-driven insights that drive measurable business outcomes
- Skilled in developing and optimizing complex ETL workflows, improving data quality by up to 45% and reducing reporting time by 25%
- Experienced in architecting self-service analytics platforms that empower business users to access and analyze data, resulting in a 20% increase in data-driven decision-making
- Demonstrated expertise in implementing robust data governance frameworks to ensure data security, privacy, and regulatory compliance, maintaining 100% compliance with industry standards
- Proven leadership abilities, building and leading high-performing data engineering teams, improving productivity by up to 35%
- Adept at conducting performance tuning and optimization of data pipelines, reducing processing time by 40% and increasing query response times by 60%
- Collaborative problem-solver, working cross-functionally to identify and address data-related bottlenecks, driving a 25% improvement in overall business process efficiency

### EDUCATION

Master of Science in Information Technology – Project Management | INDIANA WESLEYAN UNIVERSITY, USA  
Bachelor of Technology in Computer Science & Engineering | VEL TECH UNIVERSITY, INDIA

### SKILLS

- Programming Languages:** Python, SQL, Scala, Java, R
- Data Processing & Pipelines:** ETL/ELT, Apache Spark, Apache Airflow, Kafka
- Cloud Platforms:** AWS, Azure, GCP
- Databases:** SQL, NoSQL (MongoDB, Cassandra), Data Warehousing
- Big Data Technologies:** Hadoop, Spark, Hive, Pig
- Machine Learning:** Python libraries (Scikit-learn, TensorFlow, PyTorch), Model building, Evaluation
- Data Visualization:** Tableau, Power BI, Python libraries (Matplotlib, Seaborn)
- Data Engineering Tools:** Apache Kafka, Apache NiFi, Luigi, Apache Beam
- Cloud Services:** AWS Glue, EMR, Redshift, Azure Data Factory, Databricks
- Data Modeling:** Dimensional modeling, Star/Snowflake schemas
- Data Governance:** Data quality, metadata management, data lineage
- Soft Skills:** Time management, Leadership, Problem-solving, Collaboration, Decision-Making, Documentation and Presentation, Verbal communication
- Operating System:** MacOS, Windows, Linux

### EXPERIENCE

#### Data Engineer |PNC Financials, TX

Apr 2023 – Current

- Transitioned PowerCenter mappings into PySpark jobs, enabling seamless migration of legacy workflows for enterprise data processing applications impacting multiple business domains
- Orchestrated ETL pipelines using Python and Snowflake's Snow SQL, integrating with GCP services like Big Query and Dataflow to enable real-time data processing for a data warehouse handling 10TB+ of data.
- Designed a scalable architecture on GCP, ensuring data security with Cloud Data Loss Prevention and robust monitoring via Stack driver, supporting data operations for 5+ enterprise projects.
- Built custom data processing pipelines with Apache Beam and Dataflow, optimizing storage and processing efficiencies by 20% for data workflows supporting cross-departmental analytics.
- Built predictive machine learning models on Cloud AI Platform, improving customer behavior analysis accuracy by 30% for data-driven insights in marketing campaigns.
- Deployed advanced monitoring tools like Stack driver, achieving 99.9% uptime and reducing pipeline issue resolution time by 40% for critical ETL processes supporting operational reporting.
- Implemented storage optimization techniques on Google Cloud Storage and Hadoop, reducing cloud storage costs by 20% while managing datasets for multi-terabyte workflows.
- Integrated machine learning workflows with data pipelines on Cloud AI Platform, enabling predictive analytics and improving decision-making efficiency by 30% for customer retention strategies.

#### Data Engineer | DataOne, India

June 2019 – Nov 2021

- Designed and implemented a big data platform using Hadoop and Spark, enabling the processing of over 1 TB of data per day with 99.5% uptime.
- Developed complex data transformation and ETL pipelines, improving data extraction efficiency by 35% and reducing data loading times by 28%.
- Automated the deployment of data infrastructure using Ansible and Terraform on AWS and Azure, reducing deployment time by 50% and ensuring consistent environment configurations.
- Optimized data warehouse queries and indexes, leading to a 45% improvement in query performance and a 25% reduction in storage costs.
- Implemented a data quality monitoring and alerting system, reducing the number of data anomalies by 60% and improving reporting accuracy.
- Designed and developed a self-service analytics platform using Tableau, empowering 80+ users to access and analyze data, resulting in a 15% increase in data-driven decision-making.
- Documented data pipelines, schemas, and workflows, ensuring seamless knowledge transfer and reducing onboarding time for new team members by 30%.
- Supported the team in adopting agile methodologies and implementing CI/CD practices, improving the overall efficiency of the data engineering function by 25%.
- Proactively identified and addressed data security and privacy concerns, implementing robust access controls and data masking techniques, and maintaining 100% compliance with industry regulations.
