

VIKHYATH VARDHAN GOUD KOMIRE

vikhyathvardhangoudk@gmail.com | (224) 421-3986 | Virginia

PROFESSIONAL SUMMARY

Experienced Data Analyst with 5+ years of experience in transforming raw data into actionable insights across diverse sectors, including finance, healthcare, and education. Proficient in SQL (Oracle, Redshift), data modeling, and Azure cloud-based analytics solutions. Skilled in ETL pipeline development, Power BI reporting, and automation utilizing Python and shell scripting. Experienced in integrating data from various sources, such as Microsoft Dynamics 365, AWS, and on-prem systems. Adept at understanding IT controls, data governance, and cross-functional collaboration to deliver enterprise-grade reporting solutions and decision support systems. Committed to enhancing operational efficiency through automation and insightful recommendations.

TECHNICAL SKILLS

- **Languages & Databases:** SQL (Oracle, PostgreSQL, Redshift), Python, R, Shell Scripting
- **BI & Visualization Tools:** Power BI, Tableau, Amazon QuickSight, Google Data Studio
- **Cloud Platforms:** Microsoft Azure (Data Factory, Synapse, SQL Database), AWS (S3, EC2, Lambda, Redshift, DynamoDB)
- **ETL & Data Engineering:** Azure Data Factory, SQL-based ETL, Python ETL Pipelines, Data Modeling
- **Tools & Frameworks:** Git, Jenkins, MATLAB, SAS, PySpark, Databricks, Streamlit
- **Testing & Automation:** PyTest, Postman, CI/CD, REST API testing
- **Machine Learning & AI:** TensorFlow, scikit-learn, OpenCV, NLP, LLMs (Gemini Pro)

CERTIFICATIONS

- CloudU Certification
- Workday Data Conversion for Implementers
- Workday Pro HCM Core Services Certification

PROFESSIONAL EXPERIENCE

Ttechnos – Power BI Analyst

Washington DC | Apr 2024 – Present

- Developed and maintained Power BI dashboards integrated with Azure SQL Database, Amazon Redshift, and Oracle, improving stakeholder visibility by 75%.
- Wrote optimized SQL queries for complex data models supporting executive KPIs, reducing reporting latency by 40%.
- Automated ETL pipelines using Azure Data Factory and AWS Lambda, decreasing manual data prep by 50%.
- Integrated data from Microsoft Dynamics 365, DynamoDB, and S3 into a unified reporting system.
- Partnered with business teams to build self-service BI tools, enhancing data access and reducing ad hoc report requests by 60%.
- Conducted KPI analysis using Python and R, identifying scheduling inefficiencies and improving workforce utilization by 25%.
- Created structured data models and metadata documentation to support scalable and reusable BI solutions.
- Ensured data security and compliance using Azure role-based access controls and audit logging practices.

Pike Solutions – Data Analyst

New Jersey | Dec 2022 – Mar 2024

- Extracted and transformed academic data from Oracle and Redshift into Azure-based reporting environments using Python and SQL.
- Designed and published interactive dashboards in Power BI and Tableau, enhancing departmental planning accuracy by 30%.
- Streamlined manual reporting by developing SQL views aligned with Dynamics 365 schema, saving 12+ hours/month.
- Created Azure-hosted datasets and dashboards for HR, finance, and student performance tracking.
- Wrote stored procedures and optimized Oracle SQL queries to accelerate reporting performance by 45%.
- Built custom analytics workflows for dynamic scheduling using pandas and SQL, improving resource allocation.
- Led weekly analytics workshops to train non-technical users on dashboard usage and data interpretation.
- Coordinated with IT teams to ensure secure data flow between on-prem databases and Azure environments.

The ElderAid – Data Analyst

Chicago | Apr 2022 – Dec 2022

- Developed data validation pipelines in **Python and Azure Functions**, reducing email and scheduling errors by 35%.
- Built automated alert systems integrated with **Microsoft Dynamics 365 CRM**, boosting client response rates by 22%.
- Conducted quality checks on healthcare records stored in **MySQL and MongoDB**, resolving over 1,000 data anomalies.
- Created reporting dashboards for appointments and follow-ups using Power BI, increasing staff efficiency.
- Developed REST API test suites using PyTest and Postman, improving test coverage across microservices.
- Led UAT and regression testing cycles for platform enhancements across cloud-hosted systems.
- Partnered with QA and DevOps teams to implement CI/CD pipelines, reducing deployment issues by 40%.
- Documented workflows and collaborated with cross-functional teams for smooth production releases.

Pepkidz Learning – Software Engineer

Hyderabad, India | Jun 2018 – Dec 2019

- Utilized Python and SQL to construct data pipelines for extracting, transforming, and loading marketing and CRM data into visualization tools.
- Designed and published business intelligence dashboards in Tableau and Google Data Studio, streamlining reporting processes and enhancing data accessibility.
- Applied statistical analysis techniques using R and Excel to identify trends and develop customer segmentation models.
- Conducted comprehensive data analysis from data extraction to reporting, collaborating closely with developers and analysts to ensure alignment of insights.
- Documented ETL logic and data workflows to support scalability and facilitate seamless hand-offs between engineering and analytics teams.
- Delivered recurring and ad hoc reports to executive teams, focusing on key performance indicators (KPIs), conversion metrics, and operational performance.
- Developed a strong understanding of data analytics within the [insert industry applicable to company/projects here. For example: SaaS, retail, healthcare] space, expanding my domain expertise.

PROJECTS

Time Series Forecasting for Traffic Volume | Python, TensorFlow

- Built RNN and Bi-RNN models to predict traffic trends using time-series weather and volume data.
- Applied feature engineering, normalization, and windowing to improve forecast accuracy.

Image-Based Data Analysis | Python, OpenCV

- Designed license plate recognition pipeline using edge detection and contour filtering to enhance surveillance and automation.
- Leveraged OpenCV for image preprocessing and data analysis, including grayscale normalization, and GaussianBlur for noise reduction, Canny edge detection, and findContours for contour extraction. Extracted positional and geometric features from contours for automated pattern recognition and traffic behavior insights.

Generative AI Integration | Python, Streamlit, FAISS

- Built an LLM-powered web tool using Gemini Pro and FAISS to extract, embed, and summarize large documents. and I also designed interactive web applications specifically for data analysis using Streamlit, a robust and adaptable framework.
- Led the development of data pipelines, embedding layers, and visual interfaces.
- I designed a feature that leverages Google's generative AI models to generate text embeddings.

EDUCATION

DePaul University, Chicago - Master's in Data Science

Relevant coursework: Data Visualization, Data Analysis, Database Programming, Predictive Modeling, Python Programming, Mining Big Data, Machine Learning, Image Processing, Neural Networking and Deep Learning.

Anurag University, Hyderabad - Bachelor's in Computer Science

Relevant coursework: Cloud Computing, Machine Learning, Data Warehousing & Data Mining, Advanced Computer Networks, Advanced Databases, Big Data, Information Security, Web Technologies.
