

EDUCATION

Master's in Computer Science

New Jersey Institute of Technology,
Newark, NJ

Bachelor's in Computer Science

Jawaharlal Nehru Technological
University

SKILLS

Methodology:

SDLC, Agile, Waterfall

Languages & Scripting Languages:

C, C++, Python, Java, SQL, PowerShell,
Ruby, Unix/Linux Scripting, PL/SQL, Node.js

Tools:

Cisco packet tracer, GNS3, Wireshark,
AWTCPDUMP, Azure, VirtualBox,
VMware workstation, Docker,
Kubernetes, Splunk, Ansible, RPA,
ServiceNow, Mockito, Swagger, Winscp
TFS, SVN, Git/GitHub, Jira, Junit,
Postman, SOAP, MS Office, FileZilla,
Putty SSH

Protocols:

TCP/IP, UDP, IP addressing, HTTP,
SSL/TLS, DHCP, ARP, ICMP, LAN, WAN,
DNS, NAT, PAT, ACL

Cloud Technologies:

AWS, Azure, GCP (Google Cloud
Platform), Oracle Cloud

CI-CD/Build Tools:

Ant, Maven, Gradle, Jenkins, Bitbucket,
GitLab

Server & Databases:

Oracle, MySQL, PostgreSQL, MongoDB,
SQL Server, IBM DB2, Apache, Apache
Tomcat, WebLogic, WebSockets,
RabbitMQ

Routing & Switching:

RIP, OSPF, EIGRP, BGP, Static
Routing, HSRP, VLAN, VTP, STP,
RSTP

Operating System:

Windows, Linux

SUMMARY

Experienced Cloud/DevOps Engineer with a track record of designing, implementing, and maintaining advanced cloud infrastructure and DevOps practices. Most recently held the position of Cloud/DevOps Engineer at Freddie Mac, where strategic leadership in migrating legacy applications to AWS resulted in a 60% reduction in provisioning time. Skilled in the deployment and management of Kubernetes applications using Helm charts and optimization of CI/CD pipelines, significantly enhancing operational efficiency. Eager to leverage extensive expertise in cloud technologies and DevOps systems to drive innovative solutions and systemic improvements as part of a dynamic team.

EXPERIENCE

Freddie Mac, NJ | Jan 2024 - Current | Cloud/DevOps Engineer

- Led the migration of legacy applications to AWS using Terraform and AWS CloudFormation, enabling infrastructure as code (IaC) and reducing provisioning time by 60%.
- Implemented AWS Lambda and Step Functions to automate cloud resource provisioning and application workflows.
- Designed and deployed Helm charts to manage Kubernetes applications, optimizing deployment strategies and version control.
- Configured AWS IAM policies, Security Groups, and VPC Peering to enforce security best practices and secure microservices communication; Automated compliance checks using AWS Config, AWS Security Hub, and HashiCorp Vault for secrets management.
- Monitored cloud resources using Prometheus and Grafana, integrating alerts with ELK Stack for centralized logging.
- Developed and deployed API-driven microservices using Docker and Kubernetes, implementing Istio as a service mesh for improved traffic management and security; Optimized CI/CD pipelines with ArgoCD and GitOps, reducing deployment rollback time by 40%.

Endurance, India | Jun 2021 - Jul 2022 | Cloud Support Engineer

- Designed and deployed multi-cloud solutions across AWS, Azure, and GCP, improving cloud adoption strategies.
- Automated network infrastructure using Terraform and Pulumi, ensuring infrastructure consistency across environments; Enhanced Kubernetes cluster security by implementing RBAC, Network Policies, and AWS EKS security best practices.
- Developed and integrated CloudWatch, Azure Monitor, and Google Cloud Operations for cross-platform cloud monitoring; Strengthened CI/CD workflows by introducing GitHub Actions and GitLab CI/CD, streamlining deployment cycles.
- Conducted security scanning of Docker images using Trivy and Anchore, reducing vulnerabilities in production deployments.
- Designed AWS Transit Gateway and Azure ExpressRoute configurations for hybrid cloud connectivity.

IBM, India | Mar 2019 - May 2021 | Cloud Support Analyst

- Provided technical support and troubleshooting for enterprise cloud solutions on AWS, Azure, and IBM Cloud, resolving infrastructure, networking, and security issues.
- Automated routine cloud infrastructure management tasks using PowerShell, Bash, and Ansible, reducing manual interventions by 50%.
- Assisted in the deployment and maintenance of Kubernetes clusters and Helm chart-based applications, improving scalability and reducing downtime; Implemented IAM policies, RBAC, and VPC security best practices to enhance cloud security and compliance.
- Configured Azure ExpressRoute, VNet Peering, AWS Transit Gateway, and BGP routing for secure hybrid cloud connectivity.
- Developed and optimized CI/CD pipelines using Jenkins, GitLab CI/CD, and integrated SonarQube, Checkmarx, and Snyk for security scanning.
- Troubleshoot and optimized AWS ALB/NLB, Route 53, and Azure Traffic Manager, ensuring high availability and performance of cloud-based applications.
- Monitored and analyzed cloud infrastructure using Splunk, ELK Stack, and Prometheus, improving incident response times.
