SUMMARY

- Versatile Software Engineer with hands-on experience in full-stack web development using technologies like React.js, **Node.js**, Next.js, Spring Boot, and AngularJS.
- Skilled in designing and implementing scalable RESTful APIs, **GraphQL**, microservices, and interactive dashboards across domains like robotics, fintech, e-commerce, and gaming.
- Proficient in cloud platforms (AWS, GCP, Azure), infrastructure automation (Ansible, Terraform), and CI/CD tools.
- Strong database expertise with PostgreSQL, MySQL, SQLite, and MongoDB; experienced in performance optimization and batch job processing.
- Adept at working in agile teams, delivering user-focused solutions, and simplifying complex problems with clean, maintainable code.
- Recognized for proactive problem-solving, ownership, and consistently delivering impactful solutions under tight deadlines.

TECHNICAL SKILLS

Programming Languages: Java, C, C++, Javascript, SQL, Python, Typescript, Golang.

Libraries/Frameworks: Node.js, REST API, Mongoose.js, Prisma, Sequelize, Express.js, React.js, Next.js, Jetty, Servlet, Velocity, Bootstrap 4, HTTP, JSON, AJAX, Angular JS, TypeScript, Spring Boot, Spring JPA, Spring Security, Hibernate.

Databases: MySQL, MongoDB, Postgresql, MS SQL Server, SqlLite.

Others: Git, Github, GitLab, IntelliJ, VSCode, Postman, Sublime, Slack, Docker, AWS, GCP, Azure, Terraform, Ansible.

INDUSTRY EXPERIENCE

Ally Financial, USA (Project Name: Ally, Role: Software Developer)

Jan 2024 - present

- **Tech Stack:** Typescript, Node.js, Next.js, Material UI, Mongoose.js, MongoDB, Ansible, Terraform, GCP.
- Working on the Ally Banking platform to enhance digital banking services, focusing on **account management** and **transaction workflows**.
- Engineered secure backend APIs in Node.js with Mongoose.js for operations like balance retrieval, beneficiary management, and transaction processing.
- Implemented real-time notifications and alerts for key banking activities (e.g., successful transfers, low balance, login from new device) to enhance user trust and engagement.
- Integrated role-based access control and validation layers to comply with financial regulations and ensure data security.
- Worked on setting up the infrastructure using Terraform and managing the configurations using Ansible on GCP.
- Built and maintained responsive front-end components using Next.js and Material UI to improve UI consistency and performance.

University of San Francisco, California (Role: Computer Science Tutor (Part-time))

Aug 2023 - May 2024

- Provided **one-on-one and group tutoring sessions** to support coursework and improve student performance.
- Explained concepts related to Algorithms and Object-Oriented Programming (OOP) to students, helping them build a strong foundation through practical examples and clear, structured explanations.
- Received positive feedback from students for approachability, clarity, and effectiveness.

iView Labs Pvt Ltd, India (Project Name: Espotz, Role: Software Developer)

Oct 2020 - July 2022

- **Tech Stack:** Typescript, Node.js, Express.js, Passport.js, GraphQL, AWS.
- Espotz is an **online tournament organizing platform** where people from all around the world can participate, organize or view online gaming tournaments.
- Orchestrated auto-seeding and automated betting functions, reducing planned cheating and increasing revenue through the successful implementation of betting functionality.
- Developed a notification module for an increase in user engagement and introduced flexible stage functionality, cutting manual workload for Tournament Organizers.
- Pioneered a flexible stage functionality, enabling TOs to perform custom operations and efficiently push participants to the next stage, reducing manual workload and enhancing event management efficiency.

Groovy Web, India (Project Name: Gym Rental Platform, Role: Software Developer)

Jan 2019 - Sept 2020

- **Tech Stack:** Next.js, Next-Auth, Express.js, Node.js, TailwindCSS, DaisyUI, Sequelize, PostgreSQL
- Gym Rental Platform is a web application for users to **rent out or rent gym equipment/facilities online**.
- Developed an admin panel for managing user requests and overseeing gym listings, bookings, and payments.
- Integrated secure payment processing, real-time availability tracking, and automated notifications to streamline the rental experience for both users and gym owners.
- Implemented search functionality by tokenizing input strings, performing pattern matching, and retrieving relevant results.

PROJECTS

Dollar Manager

(MongoDB, Express.js, React.js, Node.js, Html, CSS, Bootstrap 4)

- Dollar Manager is a web-based application designed to **streamline the process of splitting funds among friends or groups** of individuals.
- Simplified the management of shared expenses by implementing features for tracking contributions and distributing funds among multiple parties, ensuring transparency and ease of collaboration.

Airlines Management System

(Angular.js, Spring Boot, hibernate, Html, CSS, Bootstrap)

- Airlines is a web-based application that allows users to seamlessly **search for available flights between a selected source and destination, view flight details, and complete bookings**.
- Implemented features such as real-time flight availability, dynamic search functionality, user authentication, and booking history management to enhance user experience and streamline the flight reservation process.

Distributed Computation Engine(CS677)

(GoLang, Protocol Buffers)

- Elevated the Distributed File System (DFS) to seamlessly support MapReduce tasks, enabling efficient data processing.
- Implemented sophisticated features, such as datatype-aware chunk partitioning, job submission, and monitoring, optimizing data management and ensuring seamless load balancing across computation nodes.

Distributed Files System

(GoLang, Protocol Buffers)

- Engineered a **fault-tolerant distributed file system (DFS)** incorporating parallel storage/retrieval, Google Protocol Buffers for interoperability, and file recovery.
- Ensured the system is fault-tolerant by sending the heartbeats from the Storage nodes to the controller and validating it at the controller's end.
- Handled file corruption issues by leveraging replicated data from storage nodes to ensure data integrity and seamless recovery without impacting system availability.
- Achieved load distribution, scalability and parallelism of the distributed systems.

EDUCATION

Masters of Science in Computer Science

AUG 2022 - MAY 2024

University of San Francisco, California

Bachelor of Engineering in Computer Engineering

AUG 2016 - MAY 2020

Vishwakarma Institute of Information Technology, India

ACHIEVEMENTS

- ★ Got selected for the IoT Challenge 2019, a prestigious national level competition hosted by Radiance 2019 at IIT Bombay.
