

Vinay – Data Engineer

Email: VINAYGD.NET@GMAIL.COM | Phone: (913) 326-5777

Professional Summary

Results-driven Data Engineer with 4+ years of experience building scalable, high-performance data pipelines, cloud-native architectures, and real-time streaming solutions across AWS, Azure, and GCP. Proven record of reducing latency, optimizing ETL/ELT workflows, enabling advanced analytics, and improving data reliability for large financial institutions. Skilled in Spark, Python, SQL, Databricks, Snowflake, Kafka, and Airflow with strong expertise in data modeling, governance, CI/CD, and infrastructure-as-code.

Technical Skills

Programming: Python, SQL, Scala, Bash, Java, PySpark, Pandas, NumPy

Big Data & Cloud: Spark, Hadoop, Databricks, Snowflake, AWS (S3, Redshift, EMR, Glue, Lambda), Azure Data Factory, GCP BigQuery

Data Engineering: ETL/ELT Pipelines, Airflow, Kafka, Informatica, Talend, dbt, Delta Lake

Databases: PostgreSQL, MySQL, MongoDB, Cassandra, Redis

Modeling & Optimization: Star/Snowflake Schemas, Partitioning, Indexing, Query Optimization, Columnar Storage

Orchestration & CI/CD: Batch/Streaming, Event-Driven Architectures, CDC, GitLab CI/CD, Terraform

Security & Compliance: RBAC, IAM, Encryption (KMS/TLS), GDPR, HIPAA, SOC 2

Visualization: Power BI, Tableau

Professional Experience

Data Engineer – Fifth Third Bank | Cincinnati, OH

Jul 2024 – Present

- Engineered 12+ large-scale ETL pipelines using AWS Glue and Lambda, reducing batch delivery delays by 70% and accelerating regulatory reporting cycles.
- Built real-time Kafka and Kinesis streaming architecture, cutting fraud-detection latency from 12 minutes to <1 minute.
- Migrated legacy SSIS workflows to Databricks PySpark pipelines processing 20+ TB weekly, improving job performance by 45%.

- Implemented CDC using Debezium + PostgreSQL with sub-3-second replication latency across distributed microservices.
- Redesigned Snowflake schemas using dimensional modeling, reducing BI query execution time by 60%.
- Developed Spark ETL workflows with GitLab CI/CD and Terraform, cutting deployment cycle time by 60% and improving reliability.
- Collaborated across finance, compliance, and analytics teams to deliver near-real-time KPIs for credit-risk and loan-delinquency insights.

Data Engineer – Discover Financial Services | Riverwoods, IL

Sep 2023 – Jun 2024

- Developed PySpark and SQL data pipelines in Databricks consolidating CRM, billing, and payment systems, reducing data delivery lag by 6+ hours.
- Built Hadoop-based batch pipelines orchestrated with Azure Data Factory, improving reliability and reducing report delays by 70%.
- Automated Airflow pipelines with advanced retry/monitoring logic achieving 99.1% pipeline uptime.
- Implemented modular dbt data models, cutting deployment time from 3 days to <1 day and reducing new-hire onboarding by 30%.
- Integrated Apache Iceberg + Delta Lake for SCD Type 2 management, improving auditability and schema evolution capabilities.
- Engineered Kafka ingestion streams processing 3M+ monthly events, powering personalization features that increased user engagement by 19%.

Junior Data Engineer – Cortracker IT Pvt Ltd | India

Mar 2021 – Dec 2022

- Developed Informatica ETL pipelines ingesting 5M+ daily transactions across finance, insurance, and telecom, improving reliability by 30%.
- Performed data cleansing and transformation using Python/Pandas, reducing data quality issues by 28%.
- Led migration of on-prem warehouses to AWS Redshift, improving reporting performance by 40%.
- Implemented SQL-based monitoring and Control-M error-handling reducing pipeline downtime by 23%.

- Built Azure Data Factory pipelines integrating on-prem and cloud systems, boosting data refresh frequency by 35%.
- Designed optimized star/snowflake schema models improving BI query performance by 47%.

Education

Master of Science in Management Information Systems – St. Francis College

Certifications

SnowPro Core Certification (2025)
