

VINAY HALAVATH

Data Analyst

Location: Saint Louis, MO | **Email:** halavathvinay12@gmail.com | [LinkedIn](#) | **Phone:** (314) 649-3742

SUMMARY

- Data Analyst with 3+ years of experience in data analysis, machine learning, and cloud technologies.
- Proficient in Python, SQL, and data visualization tools such as Power BI, Tableau, and Advanced Excel.
- Skilled in building end-to-end data pipelines using AWS (Redshift, S3, Lambda), Apache Airflow, and dbt.
- Experienced in applying machine learning algorithms like Random Forest, XGBoost, and regression models to drive actionable business insights.
- Expertise in data governance, ensuring the accuracy, integrity, and security of data across various industries, including healthcare and finance.
- Led key projects such as predictive maintenance, cloud-based financial analytics, and customer sentiment analysis.
- Strong collaborator with cross-functional teams, developing data solutions that improve decision-making and operational efficiency.

SKILLS

- **Programming Languages:** Python, SQL
- **Databases & Data Warehouses:** PostgreSQL, SQL Server, MySQL, Snowflake, Teradata, BigQuery
- **Data Visualization:** Power BI, Tableau, Advanced Excel
- **Libraries & Frameworks:** NumPy, Pandas, Matplotlib, Plotly, Seaborn, Streamlit, FastAPI
- **Data Engineering:** Alteryx, Talend, Informatica, Apache Airflow, dbt
- **Cloud Platforms:** AWS (Redshift, DynamoDB, S3, Athena, Lambda)
- **Methodologies:** SDLC, Agile (Scrum), Waterfall
- **Version Control:** Git, GitHub
- **ML Techniques:** Regression, KNN, Decision Tree, Naive Bayes, Random Forest
- **Healthcare Tools & Technologies:** HIPAA, EMR, HER
- **Analytical Skills:** Data Mining, Data Cleansing, Statistical Analysis, Data Visualization, Text Mining, ETL, Data Wrangling, Data Warehousing, Time Series Analysis, A/B Testing, SAP, SAS

WORK EXPERIENCE

Dell Technologies

August 2024 – Present

Data Analyst

- Spearheaded the development of predictive maintenance models by analysing IoT sensor data, historical maintenance logs, and machine performance metrics, leveraging machine learning algorithms to predict equipment failure events.
- Utilized AWS services (Redshift, S3, Lambda) to collect, process, and store large volumes of real-time operational data from industrial equipment, ensuring seamless integration with existing maintenance systems.
- Developed data pipelines using Apache Airflow and dbt, automating data extraction, transformation, and loading (ETL) processes for faster insights and decision-making.
- Applied statistical analysis and machine learning techniques, including Random Forest and Time Series Forecasting, to improve prediction accuracy and identify maintenance patterns.
- Achieved a 15% reduction in unplanned maintenance events, significantly improving asset uptime and operational efficiency for client equipment fleets.

Infosys BPM

November 2020 – July 2022

Data Analyst

- Led the design and implementation of a cloud-based data analytics platform, consolidating financial data from multiple systems into a unified solution for real-time reporting and advanced analytics.
- Utilized AWS services such as Redshift, S3, and Athena to streamline data storage, ensure high performance, and reduce query latency for large-scale financial datasets.
- Developed data pipelines using AWS Glue and Python to automate data ingestion and transformation processes, significantly reducing the time taken to generate reports and insights.
- Worked closely with stakeholders to define data requirements and implemented a data governance framework, ensuring the accuracy, integrity, and security of sensitive financial data.
- Designed and developed interactive dashboards using Power BI and Tableau, providing actionable insights for financial decision-making and improving executive visibility.
- Applied machine learning algorithms, such as decision trees and regression models, to predict market trends, identify fraud patterns, and improve risk management.
- Performed detailed data analysis to identify trends and anomalies in financial transactions, helping the client make informed decisions on portfolio management and compliance.
- Optimized ETL processes, reducing data processing time by 30% and improving the accuracy of financial forecasts and reporting.

- Enhanced fraud detection capabilities, leading to a 20% improvement in fraud detection rates.

Trigent

June 2019 – October 2020

Data Analyst

- Led the development and implementation of a sentiment analysis tool for an e-commerce company, utilizing natural language processing (NLP) techniques to analyse customer feedback across various platforms.
- Collected and pre-processed customer data from reviews, social media, and support tickets using Python, Pandas, and BeautifulSoup for web scraping, ensuring accurate sentiment classification.
- Applied machine learning algorithms like Naive Bayes and Logistic Regression to classify text into positive, negative, or neutral sentiments, improving customer insights and feedback analysis.
- Developed interactive dashboards in Tableau and Power BI to visualize sentiment trends, providing actionable insights for marketing and customer service teams to improve customer experience.
- Collaborated with cross-functional teams to define key performance indicators (KPIs) for sentiment analysis and developed metrics to measure customer satisfaction and brand perception.
- Automated the data pipeline to process new customer feedback in real-time, significantly reducing the time to analyse large volumes of data.
- Achieved a 15% increase in customer satisfaction by identifying key areas of improvement through sentiment insights, which were used to adjust product offerings and customer service strategies.

PROJECTS

Healthcare Data Quality Assessment

- Led the assessment of healthcare data for consistency and accuracy using data profiling techniques in SQL and Python, ensuring compliance with regulations like HIPAA.
- Designed data quality reports using Excel and Power BI, helping stakeholders monitor data integrity across multiple healthcare systems.

Demand Forecasting for Supply Chain Optimization

- Developed a demand forecasting system using machine learning techniques such as Linear Regression and XGBoost to optimize stock replenishment schedules.
- Implemented the solution in AWS using Redshift to process large datasets and integrated the results into an existing supply chain management platform.

EDUCATION

Master in Information Systems (MS)

Saint Louis University – Saint Louis, MO | May 2024
