

EDUCATION

M.S Computer Science

University Of Central Missouri

June 2023 - May 2025

Warrensburg, MO

B. Tech Computer Science Engineering

Jawaharlal Nehru Technological University

July 2018 - July 2022

Hyderabad, Telangana

TECHNICAL SKILLS

- Languages and Databases: Python, Java, C, C++, HTML, CSS, MySQL, PostgreSQL, MongoDB, No SQL
- Frameworks & Tools: Flask, Streamlit, React, TensorFlow, Pandas, NumPy, Regex, Matplotlib, Seaborn, Tweepy, VADER, Tableau, Git, FAST API, Power BI, Airflow
- Technologies : AWS(Lambda, EC2, IAM, S3, CloudWatch, Redshift, AWS Glue, Cloud Run), REST API, Distributed Systems, Databricks

EXPERIENCE

Software Developer

Soltex Systems

April 2022 – March 2023

Hyderabad, India

- Completed intensive training in software development principles, focusing on full stack technologies and industry best practices.
- Contributed to the design and development of custom data dashboards for enterprise clients. Analyzed offline and online data sources to identify redundancies and ensure data quality, resulting in improved reporting accuracy.
- Collaborated with a team of developers to implement front-end features and integrate APIs for real-time data monitoring.
- Gained hands-on experience with data handling, basic sql queries, and performance optimization techniques.
- Participated in regular sprint planning meetings, code reviews, and testing activities as part of an agile development process.

Technical Intern

Intense Technologies

December 2021 - March 2022

Hyderabad, India

- Built scalable ETL pipelines using AWS Glue, Databricks, and Airflow to process structured/unstructured data and ensure high data quality with automated validation checks.
- Developed optimized SQL queries and Python scripts to analyze large datasets, delivering actionable insights and supporting BI initiatives.
- Created interactive dashboards using Tableau and Power BI, collaborating with stakeholders to drive data-informed decisions.

RELEVANT PROJECTS:

Real-Time Weather Data Pipeline

July 2025 - Present

- Developing a real-time streaming pipeline using AWS Kinesis(1 shard), Lambda, and S3, processing weather data every 10 seconds for different cities using the OpenWeatherMap API
- Automated ingestion and storage of structured weather data in S3, resulting in a scalable system capable of processing over 25,000 records/day, with full logging and error handling via CloudWatch.

Real-Time Twitter Sentiment Analysis Dashboard

April 2025 - July 2025

- Built a real-time sentiment analysis dashboard using Streamlit and Tweepy API to fetch and analyze tweets based on live user-defined keywords
- Achieved 90%+ accuracy in classifying sentiments using VANDER, and visualized insights via matplotlib and seaborn with automatic CSV export for storage

AI - Powered Recipe Recommendation System

May 2024 - June 2024

- Built a Streamlit-based web app that recommends recipes from 2,500+ entries using user-input ingredients, allergies, and time filters.
- Achieved 90%+ match accuracy through dynamic ingredient scaling(regex) and optimized performance using pandas and Streamlit cache.

Zoo Ticket Management System

August 2023 - December 2023

- Developed a web-based ticket booking and management system for a zoo.
- Designed and implemented role-based access for admins and customers to handle activities, ticket booking, payments, and refunds. Managed data using MongoDB.

Malaria Parasite Detection Using Deep Learning

January 2022 - July 2022

- Developed a CNN-based classification model achieving 95% accuracy on NIH malaria cell image dataset using 5-fold cross-validation.
- Automated detection of parasitized blood samples using TensorFlow, OpenCV, and image preprocessing, reducing diagnostic time and human error.
