SUMMARY

Frontend-focused software engineer with 5+ years of experience building scalable web applications using **React**, **Redux**, and modern **JavaScript/TypeScript** frameworks. Skilled in designing performant user interfaces and collaborating cross-functionally to deliver impactful, customer-facing features, with recently refreshed React expertise bringing a renewed perspective on frontend best practices.

WORK EXPERIENCE

Airworks Solutions Inc

Boston, MA

Full Stack Developer

Sep 2019 - May 2024

- Built scalable full-stack features by developing reusable **React/Redux** components with automated tests (**Jest/Enzyme**), designing efficient **MongoDB** data models, and implementing **Node.js APIs** to integrate with AirWorks' machine learning infrastructure. Streamlined deployments through a **Bitbucket CI/CD** pipeline.
- Key Contributions-
 - **Developed an online CAD editor with a subset of AutoCAD functionality**
 - Built a custom map component using Mapbox GL JS to visualize and edit DXF CAD vector data, with tools for drawing and modifying geographic features such as polylines and circles
 - Designed a PostGIS database to store spatial data and implemented APIs for CRUD operations
 - **Led the design and implementation of the AirWorks order checkout form**
 - Developed a system for customers to select delivery methods and add-ons with real-time pricing
 - Integrated Stripe for payment processing, resulting in ~\$100K in cash flow
 - **Built a real-time project status tracking system for customer orders**
 - Integrated JIRA webhooks to automate status updates
 - Developed custom APIs for email notifications using AWS SES
 - **Developed a file management module with AWS S3 integration**
 - Implemented support for various file formats, including TIF files
 - Created tile server loading status monitoring via S3 bucket inspection, ensuring seamless UI updates
 - Integrated error handling for common issues like CRS errors, providing users with meaningful feedback
- **Partnered cross-functionally** with product managers, designers, and ML engineers to translate product requirements into **actionable development tasks**, facilitating **sprint planning**, and managing **release cycles**
- **Contributed to team growth** by participating in **hiring for the on-site development team**, **mentoring new engineers** and assisting in setting up and training an **offshore QA team**

Bosch India

Bangalore, India

Associate Software Engineer

Sep 2016 - Aug 2017

- Automated UDS service testing and performed comprehensive ECU validation for automotive control systems using CAPL, CANoe, and CANalyzer

EDUCATION

Santa Clara University

Santa Clara, CA

Master of Science in Computer Science and Engineering

Graduation Date: Jun 2019

Amrita University

Coimbatore, India

Bachelor of Technology in Electronics and Communication Engineering

Graduation Date: Aug 2016

SKILLS

Languages: JavaScript, TypeScript, Python

Web Technologies: HTML, CSS, React, Redux, Express, Node.js, Webpack, Jest, Enzyme, Sinon.js

Databases: MongoDB, PostgreSQL(PostGIS)

AWS: EC2, S3, Lambda, SNS, SQS, SES, CloudFront, CloudWatch, CodeDeploy
