

VIRESH SAGAR VEERAMRAJU

+1-945-244-6061 • viseshveeramraju@gmail.com • [linkedin.com/in/viseshsagar](https://www.linkedin.com/in/viseshsagar)

Versatile data and business intelligence analyst with a track record of delivering high-impact insights and automating decision workflows across financial, product, and marketing teams. Spearheaded analytics initiatives that drove a 13% uplift in customer retention, eliminated 40% of audit errors, and replaced 20+ manual reporting systems with dynamic dashboards using **SQL**, **Python**, and **Power BI**. Known for bridging strategy and engineering to build scalable **forecasting models**, **churn predictors**, and experimentation frameworks across industries. Open to relocation and ready to deliver immediate value in a fast-paced product, BI, or analytics role.

PROFESSIONAL EXPERIENCE

Deloitte, Remote, CO Jan 2025 – Present

Senior Analyst

- Automated **15+ risk and finance reports** via **SQL + Power BI**, reducing reporting time by 60% and improving leadership visibility into financial KPIs.
- Built **Python forecasting models** (ARIMA, Prophet) to simulate revenue under macro scenarios, increasing forecast accuracy by 27%.
- Deployed real-time **credit risk dashboards (Snowflake + Power BI)** tracking delinquency, utilization, and write-offs; reduced charge-offs by 18%.
- Cut audit adjustment cycles by 40% through **SQL-based reconciliation automation**, improving month-end close speed and compliance confidence.
- Built **KPI dictionary** + data standards for acquisition, retention, and onboarding metrics, adopted by 4 finance/product teams.
- Created churn risk alerts using Python (classification models) on behavioral and product usage data, supporting retention ops.
- Performed **ad hoc variance analyses** on revenue streams across digital banking products using SQL and Power BI, influencing adjustments in acquisition budgets.
- Conducted **A/B impact analysis** on onboarding flows post-engagement drop; insights drove 22% lift in savings product activation.
- Improved pipeline refresh SLAs by 35% through ETL tuning in **Snowflake** + dashboard optimization.

FastSpring, Santa Barbara, CA May 2024 – Dec 2024

Data Analyst Intern

- Created automated dashboards and reports using **Google Sheets** and **Looker Studio**, presenting key insights on business trends to the CEO, CRO, and stakeholders. Improved decision-making for the **\$300K NTR deal** with IBM.
- Migrated data from **Google Sheets** to **Looker Studio**, collaborating with Data Engineering to streamline reporting processes and provide scalable data solutions.
- Conducted **ad-hoc analyses** using **Python**, **SQL**, and **advanced Excel (VBA, Macros)**, delivering actionable insights that optimized team decision-making and improved data accuracy by 25%.
- Designed **Jira Sheets-based reports** to conduct capacity analysis on team productivity, assessing task hours by department and enhancing resource allocation, which increased operational efficiency by 30%.
- Formatted **GTM Looker dashboards** using LookML, ensuring data clarity and actionable insights for executive stakeholders, streamlining decision processes across sales and marketing teams.
- Executed **data ingestion** projects, including list building, **Salesforce data enrichment**, and regional data correction, improving data completeness and enabling better-targeted sales initiatives with a 20% increase in lead quality.
- Managed data synchronization from **Snowflake** to **Salesforce** through Omnata (no-code ETL), maintaining up-to-date data flows and reducing data retrieval time for the sales team by 40%.
- Collaborated across teams and vendors, aiding in Jira implementation and evaluating BI tools (**Tableau**, **Looker**, **Power BI**) to enhance data infrastructure and reporting capabilities.
- Assessed SDR quality and call effectiveness by analyzing outreach metrics across AMEA and APAC regions, refining targeting strategies, and improving regional engagement by 15%.
- Developed Digital River's Week-over-Week (WoW) revenue trend analysis reports to track client revenue fluctuations, contributing to strategic forecasting and supporting a 10% improvement in client retention.

Accenture, Hyderabad, India Jan 2019 – June 2022

Senior Data Analyst (ASE)

Domain/ Project 1: Healthcare

- Developed clinical performance dashboards using **Power BI** to track trial recruitment, patient adherence, and protocol deviations, enabling early detection of site-level risks.
- Created predictive models using **Python** and historical trial data to forecast patient dropout rates and optimize investigator site performance.
- Automated** weekly portfolio reporting using **SQL** Server and **SSIS**, reducing manual data preparation time by 45%.
- Partnered with regulatory affairs to monitor inspection readiness and compliance metrics across global trials.
- Led **ad-hoc analytics** supporting protocol design by comparing patient eligibility trends across 20+ historical studies.
- Conducted cross-functional data reviews with medical science liaisons and operations teams to ensure data accuracy and clinical KPIs alignment.
- Delivered **ad hoc** patient dropout risk reviews for trial leads, highlighting site-level issues and increasing retention intervention speed.

Domain/ Project 2: Financial Services

- Built **risk monitoring dashboards** in **Tableau** for transaction volumes, **fraud alerts**, and suspicious behavior trends across customer segments.
- Automated** audit-ready data pipelines in **SQL** and **Python** for monthly loan delinquency and portfolio aging reports.
- Developed credit score segmentation models using decision trees to improve personalization in loan offer targeting.
- Partnered with compliance teams to develop early warning indicators for regulatory breaches in high-risk accounts.
- Streamlined reporting logic for financial advisors, reducing redundancy in legacy **Excel reports** by migrating to a self-serve BI environment.
- Conducted **impact analysis** of interest rate changes on deposit product uptake; insights guided pricing strategy.
- Created **financial health scorecards** for customer segments based on transaction behavior, credit history, and external benchmarks.
- Enabled real-time data availability for branch ops teams through **ETL pipeline optimization** and dbt standardization.

EDUCATION

Indiana Wesleyan University, Maryville, IL
Master of Science in Information Technology Management

Jawaharlal Nehru Technological University, Hyderabad, India
Bachelor's Degree in Electronics & Communication Engineering

SKILLS

Languages & Scripting: SQL (Window Functions, Joins, CTEs, CASE logic), Python (Pandas, NumPy, datetime, matplotlib)

Data Processing & Automation: Alteryx (basic understanding), Python scripting for financial reconciliation and data validation, Google Sheets (ARRAYFORMULA, VLOOKUP, QUERY, IMPORTRANGE, pivot tables, nested IFs)

Data Visualization & Reporting: Power BI (DAX, Power Query, slicers, calculated columns, KPI cards, drill-downs), Tableau (LOD expressions, dynamic filters, storyboards), Looker Studio (GA4 connectors), Google Sheets dashboards, Excel (PivotTables, VBA, macros, conditional formatting)

Cloud & Warehousing: Snowflake (data pipelines, task orchestration, role-based access control), AWS (S3 for staging data, Athena for querying), basic usage of Redshift and EC2 for pipeline support

Financial & Operational Tools: Calero (basic understanding), Google Suite (Docs, Sheets, Slides for documentation/reporting), Microsoft Excel (VLOOKUP, nested formulas, financial templates)

Analytics & Statistical Methods: Time Series Forecasting (Prophet, ARIMA), Descriptive & Diagnostic Analysis, Financial KPI Modeling, Variance & Trend Analysis, A/B Testing (lift calculations, hypothesis testing), SLA & Dispute Analytics, Root Cause Analysis, Data Reconciliation

Data Governance & Collaboration: Audit-ready report structuring, version control using Google Sheets & Excel, stakeholder communication dashboards, SLA compliance frameworks, documentation workflows via Confluence

Tooling & Miscellaneous: Salesforce, Git, JIRA, Bitbucket, Confluence, Data Governance, Schema Mapping

PERSONAL PROJECTS

AI-Driven Marketing Strategy Optimization:

Tools Used: Python (XGBoost, KMeans, Pandas), Power BI, SQL

- Built predictive segmentation models using **Python** (XGBoost, KMeans) to optimize email targeting, improving campaign effectiveness by 20% and reducing acquisition costs.
- Designed dynamic **Power BI dashboards** to monitor engagement KPIs (CTR, conversion, churn), enabling marketing teams to pivot strategies in real time.
- Applied statistical forecasting to predict weekly sales impact by segment; achieved a 15% improvement in marketing ROI through precision targeting.

Real Estate Price Prediction & Market Analysis:

Tools Used: Python (Random Forest, Linear Regression), Statistical Techniques, Tableau, SQL

- Engineered **machine learning models** (Random Forest, Linear Regression) to forecast housing prices; improved baseline prediction accuracy by 20% using engineered features like square footage, zip code, and market trend indicators.
- Leveraged **SQL** for pipeline **automation** and **Python** for exploratory analysis; synthesized findings into investment scorecards for buyers and analysts.
- Delivered interactive **Tableau dashboards** to highlight price volatility and growth potential across metropolitan regions.

Cryptocurrency Market Intelligence Dashboard:

Tools Used: Power BI, SQL (Window Functions, CTEs), Python (NumPy, Pandas), API Integration

- Built **Power BI dashboards** to visualize price movement, volume spikes, and volatility indicators across 10+ cryptocurrencies using regression and rolling average techniques.
- Applied **SQL** window functions and time-series forecasting to reduce error rates by 20% and improved trend precision by 10%.
- Enabled real-time analytics for stakeholders by integrating API-based feeds with auto-refresh reports, accelerating insights delivery by 30%.

Financial Reconciliation Dashboard for Operations Oversight:

Tools Used: SQL, Python (Pandas), Power BI, Google Sheets, Excel

- Designed and implemented an interactive **Power BI dashboard** to monitor **purchase order fulfillment, vendor payments, and invoice reconciliation** across departments.
- Automated validation checks** for **SLA breaches** and financial mismatches using **SQL** and **Python**, increasing reconciliation efficiency by 35%.
- Integrated historical vendor data from spreadsheets and **Google Sheets** to visualize recurring dispute triggers and contract violations.
- Enabled audit-readiness by embedding change logs and exception tracking directly into the dashboard environment, supporting compliance workflows.

CERTIFICATIONS

- Udemy:** Complete Data Analyst Bootcamp 2023, Excel for Business & Data Analysis, Introduction to Finance, Accounting, Modeling and Valuation
- Google** Data Analytics Professional Certificate - In Progress
