

VISHAAL JANNU

(919)-951-9063/ vjannu77@gmail.com

vishaal-jannu-96229b207

PROFESSIONAL SUMMARY

- Experienced Java Full Stack Developer with hands-on experience delivering innovative, secure, and scalable enterprise solutions across finance, healthcare, insurance, and e-commerce sectors.
- Proficient in Core Java 8/11 with strong expertise in OOP concepts, Collections, Multithreading, Generics, Exception Handling, Streams API, and Lambda Expressions for developing high-performance applications.
- Extensive hands-on experience with the Spring ecosystem including Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, Spring Batch, and Microservices, creating modular and enterprise-grade architectures.
- Skilled in developing RESTful APIs, SOAP web services, and GraphQL APIs, with experience integrating third-party services and implementing performance optimization through caching strategies (Redis, EhCache).
- Strong frontend development capabilities using React.js, Angular 8+, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, and jQuery, creating responsive and user-friendly web applications.
- Experienced in building event-driven systems using Apache Kafka, RabbitMQ, and asynchronous message-driven architectures, ensuring high reliability in distributed systems.
- Cloud platform expertise with AWS (EC2, S3, RDS, Lambda, CloudWatch, CloudFormation) and Azure DevOps, implementing robust CI/CD pipelines, cloud deployments, and infrastructure automation.
- Practical experience with containerization (Docker) and orchestration (Kubernetes, OpenShift) for microservices deployment, scaling, and high-availability solutions.
- Database proficiency in MySQL, PostgreSQL, Oracle, and MongoDB with solid skills in schema design, query optimization, stored procedures, indexing, and replication strategies.
- Well-versed in system monitoring and troubleshooting using ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, and Splunk, maintaining application health and minimizing downtime.
- Experienced in API security and authentication implementation with OAuth2, JWT, SAML, LDAP, securing sensitive data and ensuring compliance with industry standards.
- Active participant in Agile/Scrum practices, contributing to sprint planning, backlog grooming, standups, retrospectives, and code reviews for quality deliveries.
- Knowledgeable in DevOps practices, with hands-on experience in Jenkins, GitHub Actions, Maven, Gradle, SonarQube, and automated build/deployment pipelines for continuous integration.
- Comprehensive testing experience with unit testing (JUnit, Mockito), integration testing, and automation testing using Selenium, Postman, and Swagger for reliable systems.
- Proven track record in performance optimization for high-traffic systems through code refactoring, database query optimization, and applying efficient design patterns.
- Effective collaborator with cross-functional teams including product managers, QA engineers, DevOps, and business stakeholders, ensuring alignment with business goals.
- Team player and mentor, providing guidance to junior developers, conducting technical workshops, and participating in knowledge-sharing initiatives.
- Solid experience with cloud migration projects, transitioning on-premise applications to AWS/Azure with re-architecture for improved scalability and cost optimization.
- Strong business analysis skills for requirement gathering and client interactions, translating business needs into technical specifications and implementation strategies.
- Comprehensive SDLC experience covering design, development, testing, deployment, monitoring, and post-production support phases.
- Proficient with API documentation and collaboration tools including Swagger, Confluence, and JIRA, ensuring effective communication between team members.
- Strong problem-solving abilities with excellent debugging and troubleshooting skills, quickly identifying root causes and ensuring smooth production performance.
- Committed to continuous learning of emerging technologies (Micro-frontend architecture, Serverless Computing, Cloud-native development) and applying them in practical projects.
- Focused on maintaining code quality through clean code practices and software engineering best practices to ensure maintainability and scalability.
- Track record of delivering customer-focused, innovative, and cost-effective solutions that consistently meet expectations in fast-paced environments.
- Excellent communication and teamwork abilities, effectively bridging technical and non-technical stakeholders to achieve shared objectives.

TECHNICAL SKILLS

- **Languages:** Java 8/11, JavaScript (ES6+), TypeScript, SQL, Shell Scripting
- **Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Security, Spring Batch, Hibernate/JPA, Node.js, Express.js, React.js, Angular 8+, Bootstrap, jQuery
- **Web Services & APIs:** REST, SOAP, GraphQL, API Gateway, Swagger/OpenAPI
- **Databases:** MySQL, PostgreSQL, Oracle, MongoDB (schema design, query optimization, stored procedures, indexing, replication)
- **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda, CloudWatch, CloudFormation), Azure DevOps (CI/CD, cloud deployments, infrastructure automation)
- **DevOps & CI/CD:** Jenkins, GitHub Actions, Maven, Gradle, SonarQube, Docker, Kubernetes, OpenShift, Infrastructure as Code (Terraform, CloudFormation)
- **Messaging & Event-Driven Systems:** Apache Kafka, RabbitMQ
- **Monitoring & Logging:** ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, Splunk
- **Testing:** JUnit, Mockito, Selenium, Postman, TDD/BDD practices
- **Security & Authentication:** OAuth2, JWT, SAML, LDAP, Role-Based Access Control
- **Collaboration & Tools:** Git (GitHub, Bitbucket), JIRA, Confluence, Agile/Scrum

PROFESSIONAL EXPERIENCE

Client: T-Mobile, Overland Park, KS | **May 2025 – Present**

Role: Sr. Full Stack Java Developer

Responsibilities:

- Designed and developed Spring Boot microservices and RESTful APIs, enabling seamless integration across enterprise applications.
- Built and maintained commercial web applications using Spring MVC, Struts, Java, JavaScript, and jQuery, improving application stability and scalability.
- Developed interactive and responsive user interfaces with React.js, Redux, JSP, Thymeleaf, HTML5, CSS3, Bootstrap, and JavaScript, enhancing user experience and reducing page load times.
- Implemented GraphQL APIs to provide flexible client-side data fetching and optimized application performance.
- Created Single Page Applications (SPA) using React Router and Flux architecture, improving navigation and state management.
- Managed builds and deployments using Maven, Gradle, Jenkins, and GitHub, ensuring smooth CI/CD pipelines.
- Developed JUnit, Mockito, and PowerMockito test cases to ensure reliability and maintainability of modules.
- Applied SonarQube for static code analysis, improving code quality and maintainability.
- Integrated monitoring and analytics with Grafana, Redis, DB Sharding, and Click Tracking for real-time performance tracking.
- Supported deployment across Development, Test, UAT, and Production environments with WebLogic, JBoss, and Linux platforms.
- Mentored junior developers, conducted code reviews, and drove best practices in Agile ceremonies, contributing to higher team productivity and code quality.
- Optimized application performance, reducing page response times by ~25% through code refactoring, caching strategies, and database query tuning.
- Led a cloud migration initiative, successfully re-architecting legacy components into AWS-based microservices, improving scalability and reducing infrastructure costs.
- Designed and deployed containerized applications using Docker and Kubernetes, improving deployment consistency and scalability.
- Implemented API Gateway and load balancing to support high-volume traffic and ensure seamless failover.
- Leveraged AWS services (EC2, S3, RDS, Lambda, CloudWatch) to build secure, cost-efficient, and scalable microservices.
- Automated infrastructure provisioning using Terraform and CloudFormation, reducing manual deployment efforts by 40%.
- Built real-time dashboards in Grafana and Kibana (ELK stack) to monitor logs, system metrics, and application performance.
- Designed and implemented caching layers with Redis and message-driven architectures with Kafka, increasing throughput and lowering response latency.

Environment: Java 8, J2EE, Spring Boot 2.x, Spring MVC, Struts, Servlets, JSP, React.js, Redux, HTML5, CSS3, Bootstrap, JavaScript, AJAX, GraphQL, Redis, DB2, SOLR, Jenkins, GitHub, SonarQube, JBoss, WebLogic, Linux, Eclipse IDE, Maven, Gradle, Docker, Kubernetes, AWS (EC2, S3, RDS, Lambda, CloudWatch).

Client: BNY, New York, NY | Nov 2024 – May 2025
Role: Full Stack Java Developer

Responsibilities:

- Actively involved in all phases of SDLC, following Agile/Scrum methodology with daily stand-ups, sprint planning, and retrospectives.
- Collaborated with business analysts and UI/UX teams to gather requirements, design interfaces, and implement user-friendly workflows.
- Architected the frontend using React, Relay, and GraphQL, and implemented Angular 2+ (with RXJS, CLI, Directives, Services, Validators, Sass, and Bootstrap) for responsive, dynamic Single Page Applications (SPAs).
- Built web pages with cross-browser compatibility and enhanced interactivity using JavaScript, jQuery plug-ins (Drag & Drop, AutoComplete), JSON, and AJAX.
- Developed and consumed RESTful and SOAP services using Spring MVC, JAX-RS, and WebFlux; tested APIs using Postman.
- Designed and implemented a GraphQL service with Spring Boot, WebFlux, and Reactor for efficient integration with existing microservices.
- Wrote backend business logic using Core Java 8 features (Streams, Lambdas, Optionals) and implemented persistence with Spring JPA, JDBC, and Hibernate ORM.
- Designed and optimized database components (tables, views, stored procedures, PL/SQL functions) in Oracle and PostgreSQL.
- Configured build and deployment pipelines using Maven, Git, Jenkins, ensuring smooth CI/CD integration.
- Utilized Azure Cloud (VMs, AD, Web Apps, Storage, Cloud Services) for hosting, deployments, and monitoring applications.
- Managed source code with SVN and Git, tracked defects with ALM, and ensured code quality using JUnit and Log4J for debugging and logging.
- Ensured performance and scalability by implementing asynchronous messaging with Kafka, applying caching strategies, and optimizing queries.
- Improved application performance and reduced server load by implementing client-side validations in Angular and React.
- Enhanced API efficiency by introducing GraphQL and optimizing REST endpoints, reducing redundant network calls by 25%.
- Successfully deployed and maintained applications on Azure Cloud, improving scalability and system reliability.
- Actively participated in code reviews, knowledge-sharing sessions, and collaborated with QA teams for end-to-end testing.

Environment: Core Java 8, J2EE, JSP, Servlets, Spring Boot, Spring MVC, Hibernate, JPA, REST, GraphQL, React, Angular 2/4, JavaScript, jQuery, HTML5, CSS3, Bootstrap, JSON, AJAX, Oracle, PostgreSQL, Kafka, JMS, Maven, Git/SVN, Jenkins, JUnit, Log4J, Azure Cloud.

Client: Nationwide, Columbus, OH | Oct 2023 – Oct 2024
Role: Full Stack Java Developer

Responsibilities:

- Followed Agile/Scrum methodologies, participating in sprint planning, daily stand-ups, and retrospectives.
- Designed and developed responsive web interfaces using HTML5, CSS3, Bootstrap, JavaScript, React.js, jQuery, Ajax, and JSON, ensuring cross-browser compatibility and accessibility compliance.
- Built Single Page Applications (SPAs) and dynamic, responsive web apps using Angular 8/9, implementing reusable components, custom directives, pipes, modules, and services.
- Consumed SOAP-based services in Angular controllers and created Angular 9 components with NgFor, NgIf, decorators, routing, and event binding.
- Developed business logic using Core Java (11+ features like Streams, Lambdas, Completable Futures, and Observables), and migrated dependencies from Java 8 to Java 11 for better performance.
- Designed and implemented microservices using Spring Boot and REST APIs, applying microservice design patterns for modular and scalable solutions.
- Secured applications using Spring Security and OAuth 2.0, with Spring beans managing integration between UI and Hibernate.
- Built RESTful services with Spring MVC and Spring Boot, and SOAP services using XML-based messaging.
- Implemented CI/CD pipelines with Jenkins, UNIX shell scripts, and Maven; integrated SonarQube for code quality checks and automated builds.
- Deployed Spring Boot microservices in Docker containers on AWS ECS, managed S3 storage, and automated infrastructure provisioning with CloudFormation and Python scripts.
- Integrated asynchronous messaging with Apache Kafka and used the ELK stack for logging and monitoring system health.
- Managed databases with MongoDB, MySQL, and Node.js, performing CRUD operations and optimizing queries.

- Worked with GCP and contributed to cloud migration initiatives to Azure, enhancing system scalability and cost efficiency.
- Wrote JUnit test cases to improve test coverage and actively participated in peer code reviews to maintain coding standards.
- Collaborated with cross-functional teams to deliver secure, scalable, and cloud-ready enterprise applications while reducing deployment times through DevOps automation.

Environment: Java 8/11, Spring MVC, Spring Boot, Spring Security, Hibernate, JPA, REST, SOAP, Microservices, Kafka, AWS (ECS, S3, Lambda, CloudFormation), GCP, Azure, Jenkins, Docker, Kubernetes, MongoDB, MySQL, Node.js, JIRA, Maven, SonarQube, ELK, Angular 8/9, React.js, HTML5, CSS3, JavaScript, Git, JBOSS, Agile.

Client: HSBC, Hyderabad, India | **Aug 2021 – Jul 2023**

Role: Java Developer

Responsibilities:

- Actively participated in the SDLC phases including requirement gathering, analysis, design, development, documentation, UAT, and production support.
- Developed and consumed REST APIs using Java 8+ features such as Lambdas and Streams, ensuring efficient data transformation and processing.
- Built enterprise web applications using the Spring Framework (MVC pattern) and Spring Boot for modular development and rapid deployment.
- Designed and implemented Hibernate ORM configurations and session-per-request patterns to manage database transactions effectively.
- Utilized Dependency Injection (Spring IoC) and Hibernate for cleaner, maintainable code and faster development cycles.
- Created and styled dynamic, interactive UI components using HTML5, CSS3, JavaScript, AJAX, and jQuery, enhancing user experience with client-side validations and rich controls.
- Developed JSF-based user interfaces with AJAX, validators, events, and reusable UI components for rich web applications.
- Designed and implemented SOAP-based web services (WSDL, XML Schema) and generated Java Beans using Apache tools.
- Implemented business logic with EJB (Stateless, Entity, and Message-Driven Beans) and deployed packaged applications (WAR/EAR) using Maven on JBoss server.
- Utilized Log4J for application logging and debugging with configurable log levels.
- Created complex SQL queries, stored procedures, and triggers in Oracle to optimize database operations and reporting.
- Applied Agile/Scrum methodologies, participating in sprint planning, iterative development, and review meetings.
- Built and consumed microservices with Spring Boot, including RESTful services for authentication and Single Sign-On (SSO) integration.
- Developed Kafka-based custom message adapters to enable asynchronous communication between microservices.
- Actively collaborated with team members during iterative reviews, identifying issues early and improving sprint deliverables.

Environment: Java, J2EE, Spring Boot, Spring MVC, Hibernate, EJB, Servlets, JSF, HTML5, CSS3, JavaScript, jQuery, AJAX, SOAP, WSDL, XML, Apache, Maven, JBOSS, Log4J, Oracle, SQL, Agile/Scrum, Eclipse, Windows.

Techzite Solution Pvt. Ltd., Vijayawada | Dec 2019 – Jun 2020

Role: Database Design & SQL Programming Intern

Responsibilities:

- Analyzed complex business scenarios and contributed to creating conceptual and logical data models to support enterprise workflows.
- Designed relational database schemas including tables, keys, constraints, and relationships ensuring data integrity.
- Wrote and optimized SQL queries, stored procedures, triggers, and views to handle real-time business requirements.
- Performed data normalization, indexing, and query tuning to improve performance and reduce query execution time.
- Built sample datasets and test cases to validate database functionality and data integrity.
- Used ER diagrams and schema diagrams to communicate database design with the team.
- Collaborated with developers to integrate the database with application modules and resolve data-related issues.

- Documented database structures, data dictionaries, and SQL coding standards for future reference.
- Participated in peer code reviews and provided feedback on database logic and query performance.
- Enhanced teamwork, communication, and problem-solving skills by actively engaging in daily stand-ups and discussions.

Environment: SQL, Database Design, ER Modeling, RDBMS, Data Modeling, Stored Procedures, Query Optimization

EDUCATION

Master of Science in Computer Science

Illinois Institute of Technology, Chicago, IL | Aug 2023 – May 2025

Bachelor of Technology in Electronics and Communication Engineering

Gayatri Vidya Parishad College of Engineering, Visakhapatnam, India | 2018 – 2022
