EDUCATION

Master of Science in Computer Science, Current GPA: 3.67/4.00

California State University Long Beach

August 2024 - May 2026

Long Beach, CA

Bachelor of Engineering in Information Technology, GPA: 9/10

Gujarat Technological University

August 2020 - June 2024

Ahmedabad, Gujarat, India

TECHNICAL SKILLS

Languages : Java, JavaScript, Typescript, Python, HTML, CSS, JSON, AJAX, C, PHP
Frameworks : React.js, AngularJS, Vue.js, Next.js, Express, Node.js, Django, Flask, Spring, Kafka, Vite
Libraries / ML : NumPy, Pandas, Matplotlib, Plotly, Seaborn, Scikit-learn, TensorFlow, PyTorch, Keras
Databases : MongoDB, MySQL, PostgreSQL, SQLite, Redis
DevOps & Tools : AWS, Azure, Docker, Kubernetes, Git, GitHub, Postman, JMeter, New Relic, Chrome DevTools, Linux
Workflow : Jira, Trello, Kanban
Testing : Jest, Mocha

PROFESSIONAL EXPERIENCE

Software Developer Intern

California State University Long Beach

August 2024 - Present

Long Beach, CA

- Automated **ETL data workflows** across **university databases** using **Python, Pandas, NumPy, and MySQL/PostgreSQL**, reducing manual updates by **40%** while ensuring **100% accuracy** in academic records.
- Developed and maintained **interactive dashboards and reports** with **React.js, Node.js, Plotly, and advanced MS Excel** (pivot tables, macros, charts), **improving faculty reporting efficiency by 30%**.
- Built **backend APIs in Node.js, Express, and Django/Flask**, integrating with **Qualtrics survey data and Redis/MongoDB** to accelerate data retrieval and **cut report generation time from 5 minutes to under 30 seconds**.
- Enhanced scalability and reliability by deploying solutions on **AWS and Docker**, testing with **JMeter/Postman**, and using **university databases + Excel analytics** to **deliver insights for 5000+ student records**.

Associate Software Developer

Infolabz IT Services Pvt. Ltd.

June 2023 - July 2024

Ahmedabad, Gujarat, India

- Spearheaded **API integration** efforts, **reducing call frequency by 30%** and **boosting data retrieval efficiency by 20%**, enhancing system resilience for large-scale applications **supporting 3K+ users/month**.
- Launched **five distinct data pipelines**, each with a **99.99% uptime**, leading to a **60% enhancement in data retrieval speeds** and ensuring **seamless data delivery** across all systems.
- Piloted **A/B testing** on **user interface elements**, identified findings to **fix the three biggest causes of crashes**, and **increased user engagement by two standard deviations**.
- Streamlined workflows by **developing internal tools** and **automating scripts**, **cutting deployment time by 40%** and **reducing human error by 80% during CI/CD operations**.
- Collaborated with a **multidisciplinary team of 10+ members** to **deliver high-quality software solutions**, maintaining **95% code coverage across 100+ unit and integration tests**.

PROJECTS

StreamVerse

- Constructed a Netflix-style video streaming platform using the **MERN stack (MongoDB, Express.js, React.js, Node.js)**, featuring **personalized movie recommendations** ensuring **zero downtime across stress tests**.
- Integrated **machine learning algorithms** like **TF-IDF, KNN, and SVD** using **Scikit-learn** and **Pandas** to provide both **collaborative and content-based filtering** improving **user engagement by 35%** and **CTR by 20%**.
- Achieved **95% test coverage** with **JMeter**, ensured **performance scalability for 1,000+ users** using **New Relic**, and **containerized the application with Docker** to **reduce deployment time by 50%**.
- Standardized **data storage** using **PostgreSQL**, leading to a **15% faster query response time**; streamlined **project workflows** through **Git, GitHub, and Kanban**, improving **team efficiency by 20%**.

ThinkBoard

- Engineered real-time collaborative note-taking platform using **Next.js, React.js, and Tailwind CSS**; enabled **rich-text editing, tagging, and hybrid GraphQL/REST API communication** resulting in **200+ active daily users**.
- Integrated an **AI-powered chatbot** **OpenAI GPT-4 API, Node.js, and Socket.IO** to **summarize notes, suggest tags, answer user queries, and guide feature usage—enhancing UX and cutting onboarding time by 50%**.
- Optimized frontend performance with **JavaScript, AJAX, and JSON** to **support 500+ concurrent users** and **reduce task completion time by 40%**.
- Adopted **Agile development practices** and **version control** with **Git, GitHub, Jira**.

VocalScribe

- Built an audio-to-text transcription app using **Java, Spring Boot, Spring AI and React.js**, enabling **100MB+ uploads, 60-minute live recordings** with **over 95% transcription accuracy**; supported **multi-speaker scenarios up to 5 speakers**.
- Enhanced **audio processing algorithms**, **reducing background noise by 40%** and **enhancing punctuation accuracy by 30%**, resulting in a **25% higher transcript clarity score** for end-users.
- Optimized **parallel processing algorithms** to **reduce transcript generation latency from 10 seconds to under 7 seconds per request**, resulting in a **30% increase in transcription throughput and scalability**.
