

EDUCATION

Master of Science in Information Technology (STEM)

Expected Dec 2025.

CGPA: 3.67/4

Clark University; Worcester, MA

Bachelor of Science in Information Technology

Apr 2019-Apr 2023

CGPA: 3.23/4

GMR institute of technology, Razam, India

SKILLS SUMMARY

Data analytics & visualization: Python, SQL, Excel, Power BI, Tableau, MySQL, Statistics, Pandas, Numpy, Matplotlib, Data cleaning, Jupyter

Professional skills: Analytical Thinking, Adaptability, Communication, Storytelling, Team Collaboration

AI skills: Prompt engineering, Ethical use of AI, Familiarity with the working of AI agents

PROFESSIONAL EXPERIENCE

Topnotch Softsol, Hyderabad, India

June 2022 - October 2022

Data Analyst Intern

- Collaborated closely with client-facing teams to manage and optimize relational databases using SQL and Excel, ensuring clean and reliable data storage.
- Leveraged BI tools—Tableau, Python visualization libraries, and Excel dashboards—to translate complex client data into actionable insights.
- Designed and maintained interactive dashboards that enhanced data accessibility and clarity, streamlining decision-making and increasing team productivity.
- Enhanced operational efficiency by automating data workflows, improving data retrieval processes, and enabling clients to derive faster, more reliable analytical outcomes.

Computer Society Of India, Razam, India

may 2020-apr 2023

Student co-ordinator

- **Organized** and managed a national event named "Step Con" as the event manager
- **Successfully** participated in multiple hackathon during the tenure, showcasing my skills and problem-solving abilities
- **Led** a cultural group consisting of 3 members, coordinating and organizing cultural activities within the society

PROJECTS

Autonomous lane line detection using poly-lanenet and polynomial regression

Technologies:- *PolyLaneNet, Convolutional Neural Network(CNN), Hough Transform Method, Polynomial Regression)*

- **Researched** and implemented PolyLaneNet, a state-of-the-art deep learning model, for accurate lane line detection
- **Developed** and fine-tuned a Convolutional Neural Network (CNN) architecture to process road images and extract lane line features
- **Implemented** the Hough Transform method to identify and extract lane lines from the processed road
- images **Utilized** polynomial regression to fit curves to the detected lane lines, enabling accurate representation of the road geometry
- **Integrated** colour thresholding and edge detection techniques to enhance the lane line detection system's robustness in varying lighting conditions

Voice assistant using python(*Python, NLP, Tkinter, Wolframalpha*)

- **Developed** a voice assistant capable of performing various tasks using voice commands
- **Integrated** a music player feature allowing the assistant to play music upon request **Enabled**
- Wikipedia search capability, providing information on various topics
- **Developed** the ability to open popular websites like Google, YouTube, etc., in a web browser

PUBLICATIONS

- **Autonomous lane line detection using poly-lanenet and polynomial regression**

IJRPR(International journal of research and publication and reviews)

The follow-up to my primary project, this publication, is currently available on the IJRPR(International journal of research and publication and reviews) website.
