

SUMMARY

Data Analyst with 3+ years of expertise in data manipulation, predictive analytics, and business intelligence. I bring immediate value by streamlining operations through quality control insights, and performance optimization. I thrive on learning systems fast, adapting to shop-floor realities, and delivering data solutions that reduce downtime and boost output. I'm here to grow with the plant, not just report on it.

TECHNICAL SKILLS

Analysis & Statistical Modeling: Data Cleaning, EDA, Time-Series (ARIMA, Exponential Smoothing), Correlation & Trend Analysis, A/B Testing, Hypothesis Testing, Risk Scoring

AI/ML: TensorFlow, PyTorch, Scikit-learn, XGBoost, Statsmodels, ARIMA, Prophet, OpenAI APIs, LangChain, spaCy, BERT, NLTK

Tools: R, SAS, SPSS, Excel Solver, MATLAB

Database & Warehouse: PostgreSQL, Azure SQL, Oracle, Redshift, BigQuery, Synapse, Snowflake

ETL & Automation: Python, SQL, Apache Airflow, AWS Glue, Airbyte, Azure Data Factory

Visualization & Reporting: Power BI (DAX, AI visuals), Tableau (LOD), Excel Dashboards, Google Data Studio

Cloud & Big Data: AWS (SageMaker, S3, Bedrock), Azure (OpenAI), GCP (Vertex AI), Hadoop

Project Management: SharePoint, JIRA, Six Sigma (DMAIC)

EXPERIENCE

Data Analyst, Jan 2024 – Sep 2025

PNC Financial Services, Dallas, Texas

- Developed a credit risk scoring model using SQL, Amazon Redshift, and PostgreSQL to resolve fragmented borrower evaluations, brought structure to segmentation and improved accuracy by 18%.
- Query delays in the credit pipeline were slowing approvals, re-engineered SQL workflows and automated data retrieval, enabling faster underwriting with a 25% boost in speed.
- Loan defaults were rising without reliable early indicators, addressed by building a logistic regression model and using scikit-learn, accurately flagging risk-prone applicants and reducing losses by 10%.
- Behavioral patterns were buried in unstructured text and temporal data, leveraged TensorFlow and PyTorch to build NLP and time-series models, uncovering actionable insights and stabilizing forecasts by 20%.
- Integrated AWS Glue and Snowflake into ETL pipelines to enforce data quality checkpoints and improve scalability, used DAX to compute risk metrics, reducing reporting discrepancies by 20% and strengthening audit readiness.
- Risk managers lacked a clear portfolio view, created interactive Power BI dashboards with AI visuals and drilldowns, which increased usage and engagement by 30% across credit teams.

Data Analyst, Jan 2021 – Dec 2022

LTI Mindtree, Andhra Pradesh, India

- Engineered and optimized sales forecasting systems using ARIMA and Excel Solver, deploying them on Azure Synapse for real-time performance tuning while preparing architecture handoff documents for future Databricks integration.
- Designed behavioral segmentation using clustering and XGBoost in Python to drive campaign ROI gains, partnered with marketing stakeholders to define AI-driven targeting logic.
- Cleaned and modeled data from SQL Server, Azure SQL DB, Oracle, and automated data pipelines with Azure Data Factory and Airbyte for real-time dashboards.
- Contributed to modular ETL design discussions and documented output formats for ML-readiness and reusability.
- Delivered interactive dashboards in Power BI and Tableau (LOD), used by 60+ executives, while incorporating feedback loops to retrain supporting models and track metrics via MLflow.
- Used SAS and SPSS for historical trend correlation and applied hypothesis testing to validate regional sales performance shifts for post-strategy rollout.
- Coordinated with MLOps and data scientists to align training data pipelines and pre-processing scripts using NumPy, Scikit-learn, and pandas, reducing pipeline rework and improved model readiness.

PROJECTS

- Credit Default Prediction (AWS + CI/CD):** Built logistic regression models in Python using Scikit-learn, deployed via Flask, Docker, FastAPI, and AWS Lambda with CI/CD triggers. Achieved AUC 0.94 and reduced turnaround for deployment from 2 days to 2 hours.
- Customer Churn Detection (NLP+ spaCy+ BERT):** Applied spaCy and BERT embeddings to classify customer support logs and sentiment triggers. Deployed insights via Power BI dashboards and integrated alerts by email automation, improving retention 15%.
- ML Forecasting Dashboard (Azure + ARIMA + Tableau):** Built end-to-end demand forecasting system using ARIMA, Prophet, and Azure Synapse. Visualized trends using Tableau and Power BI, enabling operations to proactively adjust supply schedules.

ACHIEVEMENTS

- Grant Winner:** Awarded \$5,000 by India's Ministry of MSME at Hackathon 2.0 for IoT-based predictive maintenance solution.
- Entrepreneurship Representation:** Selected to represent PESCE in a national startup pitch round with IIT-Madras (2021–22).
