SUMMARY

Full-Stack Developer with 4+ years of experience in Java, Spring Boot, ReactJS, and microservices, specializing in building scalable, production-ready applications. Proficient in designing backend and full stack applications, implementing RESTful APIs, and optimizing SQL queries. Experienced in cloud platforms, CI/CD pipelines, and Agile (SAFe) environments, with strong focus on system design and end-to-end delivery.

EXPERIENCE

Graduate Assistant

Jan 2024 – May 2025

Texas Tech University

- Engineered scalable Spring Boot microservices in hybrid cloud environment with distributed architecture, deploying on AWS and Azure platforms, integrating with React and AngularJS UIs and securing RESTful APIs using OAuth 2.0 and JWT authentication for large-scale distributed systems.
- Developed web application using AngularJS and Spring Boot with Azure App Service and Azure SQL Database, optimizing database performance by refactoring JPA queries and indexing MySQL schemas, improving data retrieval latency by 40%.
- Implemented Azure monitoring using Azure Monitor and Application Insights with Sumo Logic dashboards. Leveraged structured logging (SLF4J), exception tracking, and CI/CD pipelines with Azure DevOps, reducing resolution time by 70%.
- Designed solution architecture for enterprise application modernization, migrating legacy systems to cloud-native microservices using Azure Service Bus and implementing enterprise integration patterns with REST and SOAP web services.

Java Full Stack Developer

Nov 2020 – Aug 2023

Cognizant Technology Solutions

- Worked on a large-scale distributed microservices project, 'IELTS Modernisation', building cloud-native, event-driven systems using Spring Boot and AWS for thousands of concurrent users, improving backend scalability and system reliability by 45%.
- Developed reusable React.js components with state management, improving UI responsiveness and reducing page load times by 25%. Enhanced UI performance through efficient rendering, lazy loading while ensuring accessibility, responsive design across devices.
- Optimized database operations and system performance in PostgreSQL, achieving a 35% improvement through efficient query handling, JPA/Hibernate tuning, and proper indexing within a distributed microservices architecture.
- Built AWS-based infrastructure using Amazon API Gateway, AWS Lambda, SNS, SQS, and CloudWatch for event-driven workflows. Implemented OAuth 2.0 security, structured logging, reducing debugging time by 70% and incident resolution time by 40%.
- Managed production system reliability through comprehensive monitoring using Sumo Logic dashboards, AWS CloudWatch, and proactive alerts. Maintained Nexus repositories for seamless deployment, and resolved critical production bugs in distributed systems. Implemented alerting mechanisms that reduced system downtime by 60% and improved service availability.
- Developed automated test suites using JUnit and Mockito, achieving 98% code coverage. Implemented CI/CD pipelines with SonarQube for code quality and Nexus for artifact management, ensuring reliable deployments across distributed services.
- Coordinated hotfix releases by diagnosing and patching production bugs, deploying fixes with minimal downtime, and merging changes across environments. Reduced downtime by 50% through faster hotfix turnaround and consistent environment synchronization.
- Led technical architecture decisions and client demonstrations for multiple POCs, designing system architectures and collaborating with cross-functional teams, including DevOps engineers, QA leads, and POs in SAFe methodology.
- Mentored junior developers and led sessions on microservices patterns, architecture best practices, and troubleshooting production issues, fostering team growth and technical excellence.

PROJECTS

Interactive RAG ChatBot using LangChain | *Python, LangChain, Chainlit, OpenAI, Chroma*

Aug 2024 – Nov 2024

- Built a chatbot application for domain-specific question answering using LangChain and Chainlit. Developed multi-format document processing pipeline supporting PowerPoint and PDF loaders with recursive text chunking.
- Integrated OpenAI embeddings with Chroma vector store for semantic search and context-aware retrieval. Implemented persistent vector database storage with source document attribution for enhanced traceability.

Microblogging Platform | *Node.js, AngularJS, GraphQL, MySQL, Kafka, Docker, Kubernetes*

Jan 2025 – Apr 2025

- Built a full-stack microblogging platform with Node.js and AngularJS, implementing CRUD operations, authentication, and user management through GraphQL API for efficient data fetching and real-time subscriptions.
- Containerized services with Docker and deployed on Kubernetes (AWS EKS) for auto-scaling, self-healing, and service discovery. Integrated Kafka for event-driven communication and GraphQL for efficient data fetching. Automated CI/CD using AWS CodePipeline and CodeBuild, ensuring scalable and reliable cloud delivery.

TECHNICAL SKILLS

Languages & Technologies: Java, Python, C, JavaScript, TypeScript, HTML/CSS, R, Node.js, Spring Boot, Spring Framework, Spring MVC, Hibernate, ReactJS, AngularJS, Bootstrap, JSON, GraphQL, LangChain, SQL, MySQL, PostgreSQL, MongoDB (NoSQL).

Developer Tools & Platforms: Git, Maven, Gradle, JUnit, Mockito, Postman, REST Assured, IntelliJ, AWS (EC2, S3, Lambda, API Gateway, SQS, SNS, CloudFront, CloudWatch), Azure, GCP, Docker Containerization, Kubernetes, Terraform, Sonar, PyCharm, Eclipse, VSCode, Bitbucket, Github Copilot, Jira, Confluence, SonarQube, Nexus Repository, Version Control, Linux Elasticsearch, Apache Spark.

Other Technologies: RESTful Web Services, Microservices Architecture, Event-Driven Microservices, Kafka, API Gateway, OpenAPI/Swagger, OAuth 2.0, JWT Authentication, System Design, CI/CD Pipelines, Agile (SAFe), Scrum, Kanban, Sumo Logic, Structured Logging, Large-Scale Distributed Systems, Network Monitoring, Automated Test Suites, Data Structures and Algorithms.

CERTIFICATIONS

- Certified by Meta as Front End Developer.
- Certified in Machine Learning Internship by Codemania.
- Certified by Microsoft as Microsoft Technology Associate on Introduction to Python Programming.

EDUCATION

Texas Tech University *Lubbock, Texas*

Masters in Computer Science

Aug 2023 – May 2025

GPA - 4/4
