PROFESSIONAL SUMMARY

Aspiring cybersecurity professional with a Bachelor's in Physics(Umass Amherst) and hands-on experience in network simulation, packet analysis, PKI and firewall security projects. Currently completing Suffolk University's(partnered with Stackroute Learning) Advanced Cybersecurity Bootcamp with a strong foundation gaining practical experience in IT fundamentals, threat analysis, and defensive security practices through labs and projects. Holder of CompTIA A+ certificate with ongoing preparation for Security+. Strong analytical mindset, problem-solving skills, and proven ability to learn and apply technical concepts quickly. Pursuing entry-level roles like Tier 1 SOC analyst, Junior Incident response analyst, Junior sys admin, etc.

TECHNICAL SKILLS & CORE COMPETENCIES

IT & System Administration

- Linux Administration
- Operating system security(firewalls, sudoers configuration, etc)
- Patch management(Windows +Linux)

Networking Fundamentals

- Network infrastructure,
- TCP/IP
- Routing +switching fundamentals
- Connectivity(ping, traceroute, loopback, etc.)

Cybersecurity Foundations

- Certificate Management(OpenSSL)
- PKI
- Encryption
- Risk/Vulnerability Management

Security Analysis & Defense

- Packet Capture and Analysis(Wireshark, tcpdump)
- Vulnerability Scanning(OpenVAS)
- Intrusion Detection(Snort)

System & Network Security

- Nmap scanning + Port enumeration
- Network simulation and defense strategies(GNS3)
- Firewall Configuration(OPNsense, pfsense)

Additional Skills

- Attention to Detail
- Communication
- Creativity
- Problem Solving
- Research

EDUCATION & TRAINING

Suffolk University+Stackroute Learning | Boston, MA
Advanced Cyber Security Bootcamp

January 2025 - Present

Expected graduation: September 2025

- Completed training in IT Fundamentals, Security Fundamentals and Security Analysis including hands-on labs and a capstone project.
- Gained practical experience in network security, vulnerability assessment, pentesting, PKI, firewall configuration, packet analysis and encryption
- Built and tested simulated environments with tools such as OpenSSL, Wireshark, GNS3, pfSense, and nmap to reinforce security concepts
- Developed strong skills in troubleshooting, network defense, and certificate management while applying real-world security practices.

PROFESSIONAL EXPERIENCE

Boundless Energy | Marlborough, MA

Feb 2024 - July 2024

Field Marketer

- Facilitated communication between homeowners and solar sales representatives by canvassing neighborhoods, resulting in an average of 5-7 appointments set per week.
- Collected, verified, and transferred electric bill data from over 100 houses to ensure accuracy in solar design proposals.
- Managed customer scheduling and ensured proper documentation flow for at least 10 active clients weekly, improving the team's efficiency.

CYBERSECURITY PROJECT

Vulnerability Scanner + Pen Test

- Designed and implemented an automated vulnerability scanning pipeline combining Nmap host discovery and service enumeration with OpenVAS vulnerability detection, orchestrated via Python, producing polished HTML reports with CVSS-based risk prioritization.
- Built a controlled VirtualBox lab on a Linux host (Kali booted from live USB for pentesting) by deploying a pfSense gateway VM and a vulnerable Windows VM to simulate enterprise network assets and traffic flows for safe vulnerability scanning and remediation testing.
- Applied automated OS and application patching via Python scripts and package managers
- Implemented firewall rule hardening on internal network, restricting unused ports and protocols, verified via Nmap and OpenVAS scans.
- Compiled executive- and technical-level deliverables — risk ratings, prioritized remediation roadmaps, and verified results — simulating an enterprise vulnerability management lifecycle aligned with NIST guidance.

PROFESSIONAL CERTIFICATIONS

A+, CompTIA

July 8th 2025

Security+, CompTIA

October 28th 2025

CySA+, CompTIA

Plan to take late this year/end of Jan
