

Venkat Sandeep Barla

Software Engineer | [linkedin.com/in/vsbarla/](https://www.linkedin.com/in/vsbarla/)

Email : barlavenkatsandeep@gmail.com

Mobile : +1-857-225-9708

PROGRAMMING SKILLS

Languages: C#, Java, Python, JavaScript (ES6), TypeScript, HTML, CSS, Bash, Shell

Databases: SQL – PostgreSQL, SQL Server, MySQL, Oracle; NoSQL – MongoDB, DynamoDB, Redis, Apache Cassandra

Frameworks & Libraries: .Net Core, ReactJS, React Router, Angular, Redux, Bootstrap, jQuery, Node.js, Next.js, NPM, Spring, Spring Boot, Entity Framework, Hibernate, Dapper, Lombok, J2EE, Express.js, GraphQL, Axios, AJAX

CI/CD & DevOps: Docker, Kubernetes, Jenkins, GitHub, GitLab, CircleCI, TeamCity, Maven, SonarQube

Tools & Platforms: Git, GitHub, GitLab, JIRA, IntelliJ, Visual Studio, VS Code, Vite, Linux, Datadog, Agile, Scrum, RabbitMQ, Kafka, Microsoft Azure, Amazon Web Services, SQS, SNS, IAM, RDS, S3, CloudWatch

Testing: Unit Testing, TDD, JUnit, Postman, Cucumber, XUnit, JMeter, Selenium, Cypress, Vitest, Jest, Moq, Mockito

Design Patterns & Architecture: MVC, RESTful API, Microservices, Clean Architecture, N-tier, JSON

EXPERIENCE

- **Paylocity** Remote, USA
Software Engineer *Jul 2022 - Present*
 - Engineered and implemented a comprehensive Background Check API product using C#, ASP.NET 6.0, microservice architecture, AWS API Gateway, Lambda, and DynamoDB, reducing onboarding time by 20%.
 - Supported business development efforts by driving the onboarding of 7 partners and over 700 clients, helping process over 25,000 background check orders, which generated more than \$100k in revenue within a year.
 - Developed and launched over 15 public-facing external APIs using Java, Spring, Spring Boot, and AWS cloud technologies, ensuring 100% compliance with API development standards. This effort significantly optimized system integration capabilities and reduced software development effort for new public APIs by 25% for other teams.
 - These APIs were adopted by around 120 paid customers with around 1,500 users, processing integrations that drove revenue growth of approximately \$400k in the first year.
 - Developed a user-centric interface for the External Developer Portal with React and TypeScript, streamlining API access for partners; positioned to enhance operational efficiency and accommodate a user surge from 1,500 to 5,000.
 - Implemented robust backend infrastructure for the external developer portal using .NET 6, AWS ECS Fargate, and a comprehensive suite of AWS services. This infrastructure enabled the testing and publishing of public B2B APIs for 3rd party integrations, to allow scaling from onboarding dozens at a time to thousands, while linking on-prem and cloud systems for optimized performance and scalability.
- **Clarivate** India
Software Engineer *Mar 2020 - Jul 2021*
 - Took ownership of maintaining and enhancing a legacy API system for managing patent portfolios using C# and .NET 6, optimizing performance to reduce incident response times from 24 hours to less than 2 hours, while guaranteeing continuous availability, leading to improved client satisfaction and operational stability.
 - Built web applications using Angular, leveraging component-based architecture, services, and reactive forms to enable efficient third-party API integration and enhance user interaction for data analysis and insights.
 - Exhibited leadership by collaborating closely with stakeholders and cross-functional teams to gather requirements and ensure alignment, facilitating the successful delivery of API products that met business and technical goals.
- **FHPL** India
Software Engineer *Jan 2019 - Feb 2020*
 - Engineered backend services in Java with PostgreSQL DB for a healthcare claims platform, enabling real-time submissions, policy management, and improving system reliability and integration with third-party systems.
 - Built responsive frontend user interfaces using React, enhancing user experience and reducing claim processing time by 25% through streamlined approval tracking and seamless interaction with third-party systems.
 - Streamlined deployment processes by employing version control with GitHub and utilizing Azure DevOps for CI/CD pipelines, reducing deployment time by 30% and automating releases across multiple environments, improving deployment efficiency and reducing errors.

EDUCATION

- **Northeastern University** Boston, MA
Master of Science in Information Systems *Sep 2021 - Apr 2023*
