Summary

Analytical and results-driven Data Analyst with 3+ years of experience transforming raw data into actionable insights. Skilled in SQL, Power BI, Excel, and SSRS for building interactive dashboards, automated reports, and ad-hoc analyses. Proven ability to improve reporting efficiency, data accuracy, and operational performance in both public sector and business environments. Adept at supporting cross-functional teams in decision-making, forecasting, and KPI tracking.

Technical Skills

Data Analysis & ETL: SQL, SSRS, Excel, Python (Pandas, NumPy), API Integrations

Visualization & BI: Power BI (DAX, M Query), Tableau

Data Warehousing & Cloud: Azure Data Factory, Azure SQL Database, Snowflake

Analytics & Modeling: Forecasting, Trend Analysis, Variance Analysis, KPI Reporting

Tools: Power Query, Power Automate, JIRA, Advanced Excel (Pivot Tables, INDEX-MATCH, VLOOKUP)

Experience

State of Florida

May 2025 – Present

Data Analyst

Tallahassee, FL

- Extract, transform, and analyze large datasets from SQL Server and eCIRTS systems to evaluate program performance, client demographics, and service utilization trends.
- Develop and automate SSRS reports that consolidate complex datasets into digestible, actionable insights for program directors and policymakers.
- Build interactive Power BI dashboards for tracking county-level performance, client satisfaction, and budget allocations, enabling data-driven decision-making.
- Conduct variance and trend analysis in Excel to monitor spending patterns, forecast utilization, and identify anomalies across multiple fiscal years.
- Partner with IT and program management teams to improve data quality and reporting accuracy, implementing validation checks and data integrity measures.

Carlson Wagon Travels

August 2024 – May 2025

Data Analyst

Remote

- Built Power BI dashboards visualizing over \$500M in travel expense data, providing executives real-time visibility into spending and supplier performance.
- Created SQL-based ETL pipelines and SSRS reports to automate data refreshes, reducing reporting time by 40
- Implemented Excel-based forecasting models for departmental budgeting and cost allocation, improving financial planning accuracy.
- Consolidated multi-source data into Azure Data Factory, enhancing data consistency and near real-time analytics.
- Identified reporting inconsistencies, improved data governance standards, and developed audit reports for expense validation.

Infosys

January 2022 – June 2022

System Analyst

Chennai, India

- Created SQL reports to track hospital admissions, billing trends, and insurance claim outcomes, enabling faster decision-making.
- Automated the integration of EHR and financial data through API-based pipelines, ensuring compliance with HIPAA regulations.
- Developed Power BI dashboards to monitor patient occupancy and readmission rates, supporting better resource allocation.
- Collaborated closely with clinicians, billing teams, and IT staff to align reporting with business needs.

Promaestro Techsource

Dec 2019 – Jan 2022

Data Analyst

Visakhapatnam, India

- Designed and deployed Power BI dashboards to monitor public sector programs, improving transparency and accountability.
- Standardized and cleaned data from multiple agencies, improving reliability of cross-departmental reports.
- Conducted analyses of survey and program data to highlight service gaps and recommend policy adjustments.
- Built predictive models in SQL and Python to identify anomalies in welfare program claims, reducing fraudulent payments.
- Balanced competing priorities across infrastructure and public health projects while ensuring timely delivery of analyses.

Projects

Financial Transactions Anomaly Detection

August 2023 - December 2023

- Built a fraud detection model with 92% accuracy using Python and SQL.
- Created an automated monitoring system that cut unauthorized activity by 15%.
- Helped finance teams make quicker decisions with real-time dashboards.

Market Basket Analysis & Sales Recommendations

January 2024 - May 2024

- Created a recommendation system using Python and SQL to suggest product pairings, improving cross-sell performance by 20%.
- Used association rule mining to identify buying patterns and inform promotional strategies.
- Visualized insights in Power BI to support sales and marketing teams.

Education

University of Texas At Dallas

May 2024

Masters in Business Analytics

Richardson, TX, USA

Coursework: Database Management & SQL, Predictive Analysis, Statistics, Time-Series Analysis & Forecasting, Data Visualization, Data Warehouse

Certifications

- AWS Certified Solution Architect – Associate
- Applied Machine Learning Certification
- Alteryx Foundation Certification
