

YASH RONGALI

Denver, Colorado • +1 720 978 4797 • yashwanthrongali@gmail.com • <https://www.linkedin.com/in/rongaliyash/>

Insight-driven Data Analyst with **4+ years** of experience making messy data make sense. I dig into numbers to find patterns, build dashboards that people actually use, and **turn complex stats into stories** that drive smart decisions. Whether it's **Power BI, Python, SQL, or Tableau**—I use the right tools to break down the “why” behind the data, so teams can move faster and think sharper. If it helps people act smarter, I'm all in.

SKILLS & CERTIFICATIONS

Programming Languages and Tools: Python, R, SQL, SAS

Data Analytics and Visualization: Tableau, Power BI, Matplotlib, Plotly, Excel

Statistical Analysis and Modeling: Hypothesis Testing, Regression, Time-series Forecasting, Predictive Modeling

Machine Learning and AI: Scikit-learn, PyTorch, TensorFlow, NLP Techniques (Sentiment Analysis, Clustering, TF-IDF)

Cloud Platforms: AWS, Microsoft Azure, GCP

Data Engineering Tools: Apache Airflow, AWS Redshift, BigQuery, Star Schema Modeling, ETL Pipelines, Data Validation, Workflow Automation

Certifications: AWS Solutions Architect Associate, CU Cyber Security Certification

PROFESSIONAL EXPERIENCE

UNIVERSITY OF COLORADO DENVER, Denver, CO

Feb 2023 – Jan 2025

Data Analyst

- Leveraged **Excel, CU-SIS, Civitas Inspire** and **Navigate** to extract actionable insights, optimize complex degree plans and enhance academic pathways.
- **Designed dashboards** and reports using **Power BI**, turning complex data into clear, data-driven narratives that improved academic support initiatives.
- Ensured data integrity, accuracy and **FERPA** compliance in CU-SIS, Civitas Inspire and Navigate by implementing validation protocols and governance.
- Streamlined degree audits and planning in CU-SIS Campus Solutions, cutting processing time, improving workflows and boosting operational efficiency.
- **Led high-impact projects**, collaborating with advisors and stakeholders to enhance student support, drive efficiency and improve academic operations.

TATA CONSULTANCY SERVICES (TCS)

Aug 2021 – Jan 2023

Data Analyst

- Designed and maintained automated **ETL pipelines** in **Python, SQL** for ingesting data from multiple sources, improving **data availability by 60%**.
- Optimized query logic and data models in **Redshift** and **PostgreSQL**, reducing report generation time to **under 1 minute** for leadership dashboards.
- **Conducted financial** data analysis using Python and SQL to identify revenue, expense, and risk patterns, directly influencing strategic decision-making.
- Partnered with engineering teams to integrate workflow orchestration tools (Airflow prototypes), enabling fault-tolerant scheduling and monitoring.
- Implemented **regression, hypothesis testing**, and time-series analysis using R, optimizing asset performance and delivering accurate financial forecasts.
- Analyzed KPIs like loan-to-value and net interest margin, delivering insights that improved business unit performance by addressing key inefficiencies.
- Utilized clustering algorithms (K-means, DBSCAN) and segmentation in Python to identify customer trends, enabling personalized banking solutions.
- Applied root cause analysis with SAS and Excel, identifying financial inefficiencies and recommending cost adjustments to reduce operational overheads.
- Created financial reports and **Power BI dashboards**, performing ad hoc analyses to address executive inquiries and support strategic business decisions.
- Assessed customer feedback data by conducting sentiment analysis using **NLP**, deriving insights that improved satisfaction and service delivery metrics.

TATA CONSULTANCY SERVICES (TCS)

Mar 2021 – Aug 2021

Data Analyst

- **Engineered cloud-based data transformation** workflows using AWS and Python, aligning with financial-wide data governance protocols.
- **Engineered AI solutions** integrating ML models into workflows, improving decision-making for driver-assistance and enhancing road safety systems.
- Built and maintained **dashboards** using Tableau and Power BI, enabling stakeholders to track KPIs and monitor AI/ML initiatives' impact in real-time.
- Deployed anomaly detection systems with unsupervised learning, identifying issues proactively to boost operational efficiency across business domains.
- Conducted statistical analysis on text datasets, uncovering trends and correlations using Python libraries like NumPy, SciPy, and Statsmodels for insights.
- Performed sentiment analysis, clustering, and classification with algorithms like **k-means** and **SVM** to extract patterns and improve decision-making.
- Designed predictive models and validated findings through hypothesis testing, directly supporting business goals with actionable insights from text data.
- Created visualizations using Matplotlib and Plotly, presenting clear, data-driven insights from text analytics to stakeholders for strategic decisions.
- Analyzed semantic trends with techniques like TF-IDF, word embeddings, and cosine similarity, enhancing understanding of language patterns in data.
- Executed model error analysis via confusion matrices and precision-recall curves, ensuring robust performance and continuous workflow improvement.

EDUREKA

July 2020 – Jan 2021

Business Analyst

- Created and managed **BRDs** and functional specs in JIRA and Confluence, ensuring development teams delivered clear and aligned product solutions.
- Designed and executed product roadmaps with **cross-functional teams**, mitigating risks and ensuring all milestones aligned with strategic objectives.
- Facilitated stakeholder workshops, resolving conflicting priorities and aligning business needs with goals, leading to efficient consensus-driven solutions.
- Directed requirements workshops using **gap analysis** and user story mapping, uncovering hidden needs and preventing scope creep in critical projects.
- Performed cost-benefit analyses and feasibility studies, securing approvals for initiatives that increased revenue and improved resource allocation.
- Collaborated on go-to-market strategies with marketing and sales, achieving a significant increase in adoption rate through effective product positioning.

PROJECTS

Real-Time Social Media Sentiment Analysis System

- Extracted and analyzed key insights from social media sentiment using **NLP** models and statistical analysis, identifying trends in public opinion shifts.
- Evaluated **sentiment variability** across demographics using Python, enabling targeted communication strategies through real-time Tableau dashboards.

Distributed Data Pipeline for Cloud Infrastructure Analytics (CU Denver)

- **Developed scalable ETL pipelines** using Python and SQL, automating ingestion of 10M+ infrastructure records from API and flat-file sources.
- **Orchestrated batch workflows** with Apache Airflow, ensuring reliability, reusability, and modular design for real-time and batch processes.
- **Designed relational data models** and optimized storage in AWS Redshift, enabling low-latency access and boosting query performance by **45%**.
- **Deployed data quality validations** with Pandera and Great Expectations, achieving **99.8% data accuracy** across ingestion and transformation layers.
- **Tuned SQL performance** and integrated cloud-based logging and monitoring to ensure pipeline efficiency, scalability, and anomaly detection.

EDUCATION

UNIVERSITY OF COLORADO DENVER, BUSINESS SCHOOL, Denver, CO

Jan 2023 – Dec 2024

Masters in Information Systems, **GPA: 3.91/4.00** | **Nominated as Outstanding Student FA24**
