SKILLS

- **Data Analytics:** Python, SQL, R, Tableau, Alteryx, Power BI, Power Query, Excel, SAS, Google Sheets
- **Tools and Platforms:** SQL Server, MySQL, PostgreSQL, ETL, Git, Streamlit, Google Analytics
- **Certifications:** [Google Data Analytics](#), [UTD: Applied Machine Learning](#), [UTD: Business Decision Analytics](#)

EXPERIENCE

Business Analytics Intern | Important Gifts Inc. | Remote

Sept 2025 – Present

- Designed and maintained Google Sheets workflows to streamline the large-scale collection, validation and storage of data for the company's new job search platform.
- Automated the data cleaning and storage processes that led to an 11% increase in accuracy and around 30% decrease in the manual processing time.
- Helped the company incorporate Artificial Intelligence (AI) into day-to-day operations like real time dashboards on Google Analytics incorporating summaries of activities, donations and engagement.
- Partnered with the engineering team to define data requirements and to ensure seamless integration between data collection tools and the backend systems.

Data Scientist Student Consultant | Conagra Brands, via UT Dallas | *Dallas, TX*

Jan 2024 – May 2024

- As part of the *Predictive Analytics for Data Science* course at UT Dallas, I spent a semester working with Conagra Brands as a student consultant and analyzed 4 years of supermarket scanner data across 8 regions and 100+ product attributes.
- Utilized Python and SAS to identify key consumer drivers and developed pricing and promotional strategy.
- Conducted advanced model validation addressing heteroscedasticity, heterogeneity, and endogeneity.
- By the end of the role, I helped project an increase in sales of Conagra's Meat Substitutes by 7% through data-driven recommendations and helped reduce promotional costs by \$80,000 by developing pricing maps and price elasticity analysis.
- Presented findings to the Conagra leadership. My team was selected in the top 3 performing groups across the cohort.

PROJECTS

Enterprise Data Warehouse Design | SQL | [LINK](#)

- Designed a three-tier data pipeline for the ETL of large-scale data using SQL Server to enable scalable reporting and cross-department analytics.
- Engineered workflows to integrate data from multiple sources into a star schemed model and integrated it with Power BI for reporting purposes, helping reduce reporting time by 40%.
- Created a data catalog helping reduce time by making data searchable and documented and improve data governance by managing access control, integrating logs and flagging sensitive data for privacy compliance.

Sales and Customer Analytics Dashboards | Tableau | [LINK](#)

- Developed analytics dashboards analyzing more than 10,000 records, aimed to uncover trends in product performance, seasonality and customer behavior.
- Integrated Level of Detail (LOD) expressions into the visualizations, delivering key performance metrics such as total sales and profit for the sales dashboard and customers, orders and sales per customer for the customer dashboard, enabling data backed decision making.
- Added filters to help the decision makers with easy exploration.

E-Commerce Performance Analytics Dashboard | Excel | [LINK](#)

- Built an interactive Excel dashboard analyzing \$2.3M sales data with dynamic filters.
- Automated year-over-year growth tracking across multiple business segments and calculated KPIs like profit margins and order volumes, identifying top performing categories and regional sales patterns.

Telecom Customer Churn Prediction | Python | [LINK](#)

- Analyzed around 51,000 customer records to identify customers who could potentially churn. Performed Exploratory Data Analysis (EDA) to uncover patterns in churn.
- Developed machine learning models using algorithms like K-Nearest Neighbors, Logistic Regression, Naïve Bayes, Support Vector Machines and more to help classify which customers are likely to churn.
- Improved prediction accuracy by 15% by using Ensemble Learning methods like Voting and Stacking.

EDUCATION

Master of Science in Business Analytics and Artificial Intelligence

May 2025

The University of Texas at Dallas | Dallas, TX

Bachelor of Technology in Computer Science and Information Technology

May 2023

Symbiosis University of Applied Sciences | Indore, India

ACHIEVEMENTS & LEADERSHIP

- Developed and integrated a chatbot for my school that gives over 1000 students a one stop solution to all their academic queries.
- **Finalist**, Tableau Datathon, The University of Texas at Dallas: Designed and presented interactive dashboards to analyze complex data.
