SUMMARY

Highly motivated and results-oriented Master's student. Proven ability to develop and implement machine learning models for realworld applications, with a focus on predictive modeling, data analysis, and model stability. Proficient in Python, and various data science libraries. Seeking a challenging Data Analyst/Data Scientist role where I can contribute to innovative projects and leverage my skills to drive impactful results.

EDUCATION

University of Texas at Arlington , Arlington, TX, USA		Aug 2023 – Present
Master of Science in Computer Science		
□ Specializing in Intelligent Systems and Software Engineering.		
CGPA: 3.22/4.000		Aug 2018– May 2022
SRM Institute of science and technology ,Chennai,India		
Bachelor of Engineering in Computer Science and Engineering.		
CGPA: 8.50/10.00		

SKILLS

Programming Languages: Python
Databases: MySQL, PostgreSQL
Data Analysis & Manipulation: Pandas, NumPy, Polars
Data Visualization: Matplotlib, Seaborn, PowerBI, Tableau
Machine Learning: Scikit-learn, LightGBM
Deep Learning: TensorFlow, PyTorch, Sentence Transformers
Big Data: PySpark, Elastic Search
Natural Language Processing (NLP): NLTK, Text Preprocessing, Sentiment Analysis, Named Entity Rec Topic
Modeling (LDA), Transformer Models (BERT, GPT)

EXPERIENCE

Customer 360 degree view-Neo4j Graph Database and salesforce integration through Mulesoft
Developed an end-to-end customer intelligence system that leverages MuleSoft for seamless integration between Salesforce and Graph Database, transforming relationship-intensive CRM data into actionable visual insights for enhanced customer analysis.
Senior Analyst, Capgemini, Hyderabad Aug 2022 - May 2023
· Optimized data integration workflows between Salesforce and Graph Database using MuleSoft, ensuring efficient data synchronization and resource utilization.
· Collaborated with cross-functional teams to establish data mapping strategies and implement GraphDB best practices for relationship-intensive CRM data.

- Enhanced data security through implementation of robust API authentication and encryption protocols in Mulesoft integration Layers.

PROJECTS

Image Description using CNN and LSTM: Tech Stack: Python, NumPy, Pandas, Matplotlib, Pandas, TensorFlow, NLTK

- ▢ **Developed a CNN-LSTM image captioning model** trained on the **Flickr 8k dataset (8,092 images)** to generate descriptive captions for diverse visual content using CNN for image feature extraction and LSTM(VGG 16) for model training.
- ▢ **Improved Performance**, by surpassing benchmark result BLEU 0.45 (a metric for evaluating the quality of machine-generated text), achieving a score of **BLEU 0.53** through **VGG 16 model**. This work has real-world applications in assistive technologies for the visually impaired, automated content tagging for social media and e-commerce platforms, and enhanced accessibility in education and healthcare through image-to-text generation.

Home Credit - Credit Risk Model Stability: Tech Stack: Python, NumPy, Pandas, Matplotlib, Polars, Seaborn, Scikit-learn, LightGBM

- ▢ **Developed a robust machine learning pipeline to predict the likelihood of loan defaults for Home Credit using advanced modelling techniques**, Conducted extensive feature engineering, data cleaning, and aggregation from multiple datasets, including client information and credit bureau records, using **Polars and Pandas**. Used **parquet files** Significantly **reduces storage space** and allows for **efficient reading** of only the necessary columns, improving query performance.
- ▢ **Achieving an accuracy of 85.46% Using LightGBM** as the core model, enhanced by a voting ensemble approach, and employed **stratified k-fold cross-validation** with weekly grouping to ensure robust evaluation and prevent overfitting. This will enable consumer finance providers to accept more loan applications. This may improve the lives of people who have historically been denied due to lack of credit history.

LLM - Detect AI Generated Text: Tech Stack: Python, NumPy, Pandas, Matplotlib, Seaborn, NLTK, Collections, Scikitlearn

- ▢ Developed a modified **Naive Bayes classifier** to distinguish between **human-written and LLM-generated essays**, incorporating probability calculations with Laplace smoothing and identifying top predictive words for enhanced interpretability. Added custom generated essays using ChatGPT.
- ▢ Achieved **85.5% accuracy** on the development set and implemented a real-time essay classification feature for user interaction.
