Amazon

Software Developer | Jan 2024 – Nov 2024

- Worked with cross-functional teams to develop and deploy enhancements for the **DevOps and Ownership** platform using **Java, Spring Boot, MySQL**, and **AWS**, improving automated device provisioning and reducing manual configuration errors.
- Designed and implemented scalable RESTful APIs using **Spring Boot** and **Spring WebFlux** to manage device profiles and policy distribution, efficiently handling over **2 million** daily configuration requests
- Integrated **Apache Kafka** to enable event-driven workflows for real-time device enrollment and policy update triggers, reducing end-to-end provisioning latency across enterprise fleets.
- Enhanced platform observability by integrating **ELK stack** and developing custom monitoring dashboards, resulting in a 50% improvement in service uptime and incident response time..
- Built and scaled a telemetry microservice using **Java, Spring Boot, Kafka**, and **DynamoDB** to ingest and process over **5,000+** device status and heartbeat events per second for compliance monitoring.
- Improved database throughput and latency in high-traffic environments by applying asynchronous query execution (**Spring WebFlux**) and Redis caching, achieving a 40% reduction in average query response time.

Infosys

Software Developer | May 2022 – Aug 2023

- Led the integration of **Apache Spark** and **Scala** into a high-scale data processing pipeline, optimizing the handling of billions of call records and terabytes of audio data, resulting in a **30% reduction in processing time** and improved data quality
- Led migration of legacy **C++** service to **Python** improving maintainability and reducing future maintenance to 1-2 engineers.
- Implemented automatic **Aura phone extensions re-registration feature**, eliminating the need for manual intervention
- Added auto-restart functionality for the recorder on a front panel chromium crash by analyzing the crash report files

Transenigma

Software Developer | Jan 2022 – April 2022

- **Development:** Developed existing interactive web applications employing, **Spring Boot** and **Microservices** facilitating a 20% increase in client engagement.
- **Deployed on AWS with Docker:** Orchestrated application deployment into **Kubernetes** clusters and **AWS cloud** services (**EC2, S3**) using Docker containers, successfully migrating legacy systems, resulting in deployment efficiency.
- **Database:** Increased application **speed by 30%** by upgrading the database from **SQL** to **NoSQL** using **MongoDB**.
- **Implemented CI/CD Pipelines with Jenkins:** Automated build, test, and deployment processes using Jenkins, reducing deployment time by 30%, accelerating time-to-market.
- **Collaborated with Cross-Functional Teams:** Using **Jira** to deliver software solutions. Managed key aspects of authentication.

Temenos | Bangalore, India

Software Engineer Intern | Jan 2023 – April 2023

- **Architected Core Banking Systems with Spring Boot, REST APIs and JPA:** Managed development of existing core banking platforms for AIB Bank, ensuring high performance, scalability and optimized transaction processing.
- **Implemented REST APIs:** Designed microservices, **REST APIs** using **J2EE** technologies and design patterns for key banking functionalities like account management and loan processing, enhancing system compatibility and third-party integration.
- **Optimized Databases with SQL and Spring Data JPA:** Architected and maintained scalable database solutions using MySQL with JPA, ensuring data integrity, security, and achieving 99.9% uptime.
- **Code Coverage:** Contributed to the full development lifecycle of a Code Coverage project, improving code coverage metrics by 30%, automating manual processes and significantly reducing defect rates.

Skills

Languages: Java, Python, C++, HTML5, CSS3, C# JavaScript, SQL (MySQL), MongoDB

Frameworks & Tools: Spring Boot, MVC, Microservices, Kafka, Redis, Spring Data JPA, JPA/Hibernate, JDBC, React, AWS (EC2, S3), GraphQL REST APIs, Kubernetes, Docker, Jenkins, Jira, Junit, Selenium, Maven, Gradle, Apache Tomcat, JSON, Bash Scripting, Azure, Pytest, Angular, ETL scripting, Mockito, Postman

Other: Git, TCP/IP, HTTP Protocols, GPU, SoC Unit testing, Test automation, Continuous integration, SDLC, Continuous deployment, Agile, Vulnerability Management, desktop troubleshooting,

Education

Master of Science in Computer and Information Science

Campbellsville University | CPT Student - 2026 (Expected) Ready to join Immediately

Bachelor of Engineering – Computer Science and Information Technology

Marri Laxman Reddy Institute of Technology - Telangana, India
