

Name: Yathish Chandra
Email: yatishc51@gmail.com
Ph#: (904) 479-8853

Professional Summary:

- Full Stack Developer with over 8+ years of relevant work experience towards software industry in development (Analysis, Design, Coding, Testing, Implementation). Specially involved into backend development using Spring Boot and spring.
- Experience with Spring Modules like Spring IOC and Dependency Injection, Spring MVC, Spring Batch, Spring Web Flow, Spring Security (Authentication and Authorization), Spring AOP for Code Modularity and Spring Boot
- Proficiency in Hibernate and the O/R mapping to map Java domain objects with the database, spring framework to easily configure J2EE applications.
- Experience in working on various spring modules (Spring Core, Spring MVC, Spring JDBC, spring boot).
- Experience in developing frontend applications using HTML5, CSS3, JavaScript, JQuery, Bootstrap, XML, XHTML, DHTML, SAAS, LESS, DOM, Ajax, and JSP.
- Experience in Docker Engine and Docker Machine environment, to deploy the micro services-oriented environments for scalable application.
- Good Knowledge in coded Java applications on both client-side and server-side and advanced multithreading
- Experience in using Amazon Web Services like EC2, Redshift, SQS, SNS, Cloud Watch and S3.
- Experienced in configuring and deploying applications on different servers such as Apache Tomcat, Web logic, IBM WebSphere, JBoss.
- Experience in using the Log4j framework for Logging Java Application.
- Expertise in JUnit test cases with the data mocking by using Mockito for unit testing application classes.
- Experienced in leveraging GitLab for efficient version control, collaboration and automated CI/CD pipelines, streamlining software development workflows.
- Experience in developing SOAP Webservices (JAX-RPC, JAX-WS), RESTful webservices (JAX-RS).
- Extensive Experience in working with multiple databases like Oracle, SQL Server, MySQL, DB2, PostgreSQL and SQLite and NOSQL Databases like (Mongo DB, Cassandra, Dynamo DB, Infinity).
- Good experience in using Software development methodologies like Agile (Scrum), Waterfall and Rational Application Development methodologies.
- Strong experience in client interaction and understanding business application, business data flow and data relations from them.
- Expertise with Relational databases such Oracle, PostgreSQL, SQL server and MYSQL, PL/SQL.
- Having Experience on UNIX, Linux commands and Deployment of Applications in Server and ability to work effectively on Windows platforms.
- Experience with build tools like Maven for building and deploying applications to different environments.
- Worked on B2B development on IBM WebSphere 6/7, Tomcat 6/7/8 and JBOSS Applications servers.
- Strong knowledge on core IBM BPM tool.
- Involved Set up and manage access control for AWS Glue resources.
- Wrote comprehensive test cases and test plans using JUnit for Java based backend applications.
- Experience with Automation tools like Selenium and Cucumber.

Technical Skills:

Java EE Technologies	Spring, Spring Boot, JPA, Hibernate and JDBC
Web Technologies	Servlet, JSP, HTML, CSS, Bootstrap, React JS, Angular JS, Angular 6 & 8, Angular Elements, XML, Web services, NgRx, RxJs
Application/Web Servers	Web Logic, JBoss, and Apache Tomcat.
Relational Databases	MySQL, Oracle
Programming Languages	Java 8 ,11 & 17, Type Script.
JavaScript Framework	Angular JS, Angular8, Bootstrap.
Software Methodologies	SDLC (Agile, waterfall)
IDE	Eclipse, Spring Tool Suite, Red Hat Developer Studio, NetBeans, IntelliJ, IBM RSA
Source Control	Git, Bitbucket, SVN
Automation Tools	Jenkins, Nexus, JIRA, Maven, Protractor, Selenium Suite, Cucumber, TestNG and Junit for unit testing
Operating Systems	UNIX, WINDOWS, Linux and MS-DOS
Cloud Technologies	AWS, Azure

Professional Experience:

Client: Goldman Sachs, Richardson, Texas

Sept 2024 – present

Role: Java Developer

Responsibilities:

- Automated deployment workflows and enhanced CI/CD pipelines using Jenkins, GitLab, and Docker, ensuring seamless integration and scalable application delivery
- Partnered with product owners and QA teams to develop new features, address critical bugs, and refine project tasks in Java and React.js applications.
- Developed secure and efficient REST APIs with Spring Boot, enabling reliable communication between microservices and improving data exchange speeds.
- Upgraded Java-based legacy systems by integrating modern platforms and libraries and performed UAT in React to boost system performance and stability.
- Identified and resolved 17 security vulnerabilities in Java applications, improving overall system security by 20% through proactive risk mitigation.
- Implemented Kafka messaging systems for real-time data streaming, enhancing event-driven communication and system performance.
- Established advanced logging and monitoring systems with ELK Stack and Prometheus to detect and address bottlenecks proactively.
- Managed live service operations, resolving critical issues and analyzing performance trends to ensure high availability and smooth user experiences.
- Architected a resilient Spring Boot-based microservice for real-time market data ingestion, leveraging Kafka Streams for event processing and achieving millisecond latency in data delivery.
- Developed an interactive trade management dashboard in React, incorporating real-time WebSocket updates to display transaction statuses and portfolio changes dynamically.
- Designed and implemented an end-to-end testing framework for microservices using WireMock and JUnit, simulating external dependencies and ensuring consistent API behavior under edge cases.
- Implemented Canary Releases for Spring-based microservices, using Kubernetes and Istio, to gradually roll out new features while monitoring performance metrics in production.

Environment: Java, spring, Hibernate, Micro Services, Eclipse, XML, JSP, EJB, Log4j, JUnit, SQL, and Windows.

Client: Fanatics, Jacksonville, FL

May 2022 - August 2024

Role: Full Stack Developer

Project Description:

- Fanatics is a manufacturer and online retailer of licensed sportswear and runs an e-commerce platform for their merchandise.
- Led cross-functional teams to develop and maintain a java-based web application for e-commerce using java-based backend frameworks, frontend frameworks like Angular 8, RESTful APIs and microservices using Spring, Hibernate. Implemented ETL processes to streamline data management within AWS data lakes.

Responsibilities:

- Collaborated with different teams to gather and analyze requirements and implemented the required information for the various projects and applications.
- Developed and maintained backend frameworks using Java 8, Spring Framework, and Hibernate, guaranteeing ideal execution and data integrity.
- Involved in design and development of server-side layer using XML, JSP, JDBC, JNDI, EJB and DAO patterns using IntelliJ IDE.
- Create Restful Web Services and JSON object for communication using Rest controller in spring framework.
- Implemented RESTful APIs to facilitate communication between frontend and backend systems.
- Utilized Git for version control, managing branches, and performing code reviews to ensure code quality and collaboration among team members.
- Used Jenkins for continuous integration and continuous deployment pipeline.
- Successfully implemented Web Access Management Solutions using Ping Access 4 and other security products like CA Single Sign-On.
- Used JSF for internal report generation by fetching data from database with customized view using CSS and AJAX for form

processing.

- Created and compiled XML and JSON Schema to generate Java Bean classes.
- Provided the daily status to the product owner with the work done and completion of the project and the deliverables.
- Experience in deploying SAML based highly available solutions using Ping Federate.
- Performed a troubleshoot and resolved the defects to ensure the efficient code deliverables.
- Participated in Agile/Scrum development methodologies to deliver features in time-boxed iterations.
- Used Oracle DB as a Database for the data storage and used it to retrieve the data when needed.
- Designed /Architected and coded java Spring Batch and Spring Boot microservice api applications using Java 17, Spring Boot, REST, AWS, Postgresql, Kafka, Junit, Mockito, Airflow in Agile-Scrum-ish environment.
- Involved in Unit testing of application using JUnit and built the package using Gradle.
- Used and Developed Junit testcases for code validation, reliability.
- Performed code refactoring of the old codes and changed it to newer version as require for code efficiency.
- Used Spring Boot which is radically faster in building cloud Micro Services and develop spring-based application with very less configuration.
- Used Hibernate for mapping java classes with database and created queries with Hibernate query language (HQL) and integrated business layer with DAO layer.
- Dealt with reading and writing to/from the files by using newly introduced methods in Java - Java 11.
- Built Angular 8 components, UI services to consume rest services using Component based architecture provided by Angular 8.
- Skilled in Mocking Frameworks to simulate dependencies, facilitating isolated and effective unit testing scenarios.
- Proficient in utilizing GitLab for version control, collaboration, and continuous integration/delivery workflows in software development projects.
- Wrote SQL queries and stored procedures to interact with the DB.
- Implemented ETL processes to extract data from various databases, including SQL Server, MySQL, and PostgreSQL, and loaded it into the data lake on AWS using AWS Glue and EMR.

Environment: Java 8, spring, Spring Boot, Hibernate, Java Server Faces (JSF), Struts, Micro Services, GitLab JavaScript, Angular.JS, Angular 6, AWS, JSON, DOM, Jenkins, XML, POJO, DAO, JUnit, SQL, MySQL, Oracle, Git, Agile, and MacOS.

Client: LFG, Radnor, PA

March 2020 - April 2022

Role: Full Stack Developer

Project description:

- Lincoln Financial Group is a Fortune 200 American holding company, which operate multiple insurance and investment management businesses.
- Led full lifecycle development of a java application, integrating Java 8 features, Spring Security, Docker for deployment efficiency, Angular 6 for frontend, AWS services, SQL/PL-SQL, and Jenkins for CI/CD.

Responsibilities:

- Involved in Requirements gathering, analysis and design and documentation as the application was started from scratch.
- Developed the application using Java 8 and implemented its features like lambdas Expressions, Time API, Streams, functional interfaces, collectors, default methods, type interfaces, for each.
- Designed and developed using the Java collection API with Java 8 features and for Authentication and authorization extensively Spring Security is used.
- Created and compiled XML Schema to generate Java Bean classes.
- Used DOCKER to build Docker images from Docker files where code and dependencies are placed, and we created Docker containers by running these images which helps in managing storage issues.
- Implemented Angular 6 component router for navigation and Angular services to connect the web application to back-end APIs.
- Designed and developed the system used for Amazon EC2, S3, CloudWatch, and AWS Elastic Environments, including monitoring individual instances, and managing individual components and SNS, SQS for asynchronous workflow.
- Involved in writing SQL queries, PL/SQL stored procedures for the database and backend tasks.
- Implemented Spring MVC framework in the presentation tier for all the essential control flow, business level validations and for communicating with the business layer.

- Used Spring Boot which is radically faster in building cloud Micro Services and develop spring-based application with very less configuration.
- Providing the weekly status to clients with key accomplishments, project progress and status of the items to be delivered.
- Utilized Apache Kafka for building scalable and fault-tolerant distributed streaming platforms, enabling real-time data processing and event-driven architecture.
- Experienced in Gherkin for behavior-driven development (BDD), enabling clear communication between stakeholders and automated test script generation.
- Used JMS to create, send and read messages.
- Worked on Mongo DB database concepts such as locking, transactions, indexes, replication, schema design, etc.
- Involved in creating and designing a database and connect the database with Hibernate (ORM).
- Designed and developed user interfaces using components such as Struts, JSP, HTML, CSS, Bootstrap, Angular JS, Node.js, JavaScript, and ReactJS. Developed web applications like message posting and auto complete form valuations using JSON, AJAX, and DOM scripting.
- Developed logging module using Log4J to create log files to debug and trace application.
- Implemented caching techniques, wrote POJO classes for storing data and DAO's to retrieve the data and did other database configurations using EJB.
- Involved in Enhancement of existing application utilizing Angular.JS, created HTML navigation menu that is role based wherein menu items changes dynamically based on the values derived from the database in the form of XML.
- Involved in Unit testing of application using JUnit and built the package using Maven and deployed the application on to WebLogic App Server.
- Used Jenkins for continuous integration and continuous deployment pipeline.
- Developed feature components in an agile environment (Scrum) utilizing a Test-Driven Development (TDD) approach.

Environment: Java 8, spring, Spring Boot, Hibernate, MVC, Micro Services, HTML5, CSS3, JavaScript, Angular, AWS, Bootstrap, AJAX, JSON, DOM, ReactJS, Docker, Jenkins, JMS, JSF, XML, POJO, DAO, EJB, Log4j, JUnit, SQL, PL/SQL, Agile, TDD, and Windows.

Client: Hanger Inc, Texas, United States

November 2018 - February 2020

Role: Full Stack Developer

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) as requirement gathering, analysis, design documentation, development, test cases, implementing and production support of the application.
- Extensively used Java 8 features like lambda expressions for communicating between business layer and database, stream API for Bulk Data Operations on Collections using both streams and parallel streams.
- Used Java 8 Stream API and Method References features to point to methods by their names and used functional Interfaces.
- Interacted with users in case of technical problems and mentored the business users.
- Analyzing the project enhancement requirements and feasibility. Involved in Design and Development.
- Developed server-side application to interact with database using Spring Boot and Hibernate. Used Maven to build the project.
- Capable of writing expressive Gherkin syntax for defining test-scenarios in readable format, promoting collaboration between development and QA teams.
- Worked on Spring MVC framework to easily test and maintain the code.
- Designed and developed the REST based Micro services using the Spring Boot, Spring Data with JPA (Java Persistence API) and deployed Micro services onto Docker.
- Performed a thorough unit testing and resolved several data related issues before migration to production.
- Designed and developed Micro Services business components using Spring Boot.
- Implemented Micro services architecture using Spring Boot for making application smaller and independent.
- Used Log4j to provide central logging facility, comes under singleton design pattern.
- Used Hibernate for mapping java classes with database and created queries with Hibernate query language (HQL) and integrated business layer with DAO layer.
- Developed REST services using Spring and used JAXB API for XML parsing.

- Utilized Angular 6 for developing dynamic single page application for displaying member accounts.
- Used agile methodology for the software development.
- Developed dynamic and responsive Web pages from scratch using HTML5, CSS3 (using SASS) and JavaScript.
- Made, created Typescript reusable services and components to consume RESTAPI's using Component-based architecture provided by Angular 4.
- Wrote SQL queries and stored procedures to interact with the DB.
- Implemented Azure solutions, utilizing services such as Azure Virtual Machines and Azure Blob Storage.
- Developed services with Angular 2 injectable property, as to make the service available for dependency injection when creating components.
- Involved in design and development of RESTful (JAX-RS) web services for other application to communicate and tested web services using SOAP UI and REST Client.
- Used Angular two-way binding and implemented the search functionality for Internal Application using Angular.JS.
- Used Java Messaging Services (JMS) for reliable and asynchronous exchange of important information such as payment status report.
- Worked with Mongo DB to store non-relational data into collection and retrieve them whenever required.
- Implemented the project as a multi-tier application using Spring MVC& used Core Spring concepts like AOP, IOC.
- Used JSF framework for the application and utilized JSF validation framework for front end validations.
- Built Docker Images and used Docker Trusted Repository and Open shift console to maintain Docker Images.
- Worked heavily in Azure cloud resources to better achieve a lower cost and higher performance/uptime.
- Developed Enterprise JavaBeans (EJB) Message-driven beans (MDBs) used for the publisher and subscriber model for sending E- mail.

Environment: Java 8, spring, Spring Boot, Hibernate, MVC, Micro Services, Docker, Jenkins, HTML5, CSS3, JavaScript, Angular 4/2, Angular.JS, DAO, REST, JMS, JSF, Azure, EJB, Log4j, JUnit, SOAP, MongoDB, SQL, Agile and Windows.

Client: General Use Tech Solutions, India.

June 2016 – August 2018

Role: J2EE Developer

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development.
- Build a web application using spring MVC framework.
- Worked on Java Message Service (JMS) API for developing message-oriented middleware.
- Used Microservices to communicate using synchronous protocols HTTP and REST for implementing SOA.
- Used Agile methodology for Development, participated in scrums, backlog grooming, Sprint planning and retrospective meetings, attended the daily scrum calls to update the progress.
- Developed Micro Service to provide RESTful API utilizing Spring Boot with Spring MVC.
- Employed Spring Boot for initialize and bootstrapping the build configuration for the boot-based web applications.
- Used Spring Boot to remove boiler plate code which avoids code redundancy.
- Developed Stored Procedures, Triggers and Functions and actively involved in tuning SQL queries, Stored Procedures, Triggers.
- Actively involved in Function Point Analysis (FPA) meetings with business team to analyze resource requirement.
- Extensively used MVC, Factory, Delegate and Singleton design patterns.
- Used Hibernate in the persistence layer and implemented micro services DAO's to access data from database.
- Responsible for implementing new enhancements and fixing defects using Java, JSP, spring and hibernate. Developed Session beans which encapsulate the workflow logic and used Hibernate to access data.
- Implemented the project under Agile Project Management Environment and followed SCRUM iterative incremental model and configured various sprints to execute.
- Experience working with IVER which is developed in VXML which will run on VXML platform.
- Involved in designing and developing the front end of the application using JSP, Java script, AJAX, HTML5, CSS3.

- Used Angular.JS directives that allow the developer to specify custom and reusable HTML elements and attribute that define data bindings and the behavior of presentation components.
- Involved Java Multithreading to cascade multiple changes on multiple records in only one transaction and developed a batch process framework.
- Developed Junit test cases for DAO and Service Layer methods.
- Created Stateless Session EJB's for retrieving data and Entity Beans for maintaining User Profile.
- Used Log4J to capture the log that includes runtime exceptions.

Environment: J2EE, spring, Spring Boot, Hibernate, RESTFul, Micro Services, DAO, JSP, JMS, HTML5, CSS3, JavaScript, Angular.JS, EJB, Log4j, JUnit, SQL, Agile and Windows.

Client: EFFICACY SYSTEM PVT LTD, Hyderabad, india

July 2015 – May 2016

Role: Java Developer

Responsibilities:

- Involved in the Requirements collection & Analysis from the business team.
- Involved in the Development of Spring Framework Controllers. Developed Controller for request, response paradigm by Spring Controllers using Spring-MVC.
- Implemented framework in the presentation tier for all the essential control flow, business level validations and for communicating with the business layer.
- Involved in design and development of server-side layer using XML, JSP, JDBC, JNDI, EJB and DAO patterns using Eclipse IDE.
- Created Action classes and used spring related features like Validations and Action Messages.
- Hibernate DAO classes were developed to retrieve and save data using spring framework manager classes.
- Involved in developing the persistence layer using Hibernate framework.
- Involved actively in designing web page using HTML, Angular JS, jQuery, JavaScript, Bootstrap and CSS.
- Developed various DAOs for handling business logic and data manipulations from database.
- Conducted auto deployment of software applications in secured and managed environment using Docker container technology.
- Developed web Application using J2EE and Java related technologies.
- Wrote server-side programs by using JSP's.
- Used Core Java OOPS concepts (inheritance, polymorphism) in developing the code.
- Involved in coding, maintaining, and administering EJBs and JSP components to be deployed on a Web-Logic application server.
- Developed UI application using HTML5, JavaScript, CSS, AngularJS and JSP templates.
- Used Micro Services architecture with Spring Boot based services and implemented the Project structure based on Spring MVC pattern.
- Used Log4js for automated logging of error messages.
- Developed JSP's for dynamic content generation and a script file (.jsp), which contains generalized script functions.
- Wrote SQL queries and stored procedures to interact with the DB.
- Used Micro Services architecture with Spring Boot based services and implemented the Project structure based on Spring MVC pattern.
- Interacted with users in case of technical problems and mentored the business users.

Environment: Java, spring, Hibernate, Micro Services, Eclipse, XML, JSP, EJB, Log4j, JUnit, SQL, and Windows.

References: Will be provided upon request.
