Professional Summary

Data Analyst with over **4+ years** of experience in performing Business Analysis & Engineering the Data for effective analysis in Data Migration, Transformation building Enterprise Data Warehousing with Data visualization to provide insights on project deliverables collaborating with Stakeholders & SMEs. Experienced in **SQL, Excel, and Python** for data cleaning, interpretation, visualization, reporting and automation. Adept at transforming raw data into actionable insights to support business decisions. Experienced in working on projects across e-commerce, banking and agriscience domains in Agile - Scrum, Waterfall & hybrid methodologies.

Technical Skills

Operating Systems: Windows, UNIX, Linux, MAC OS

Databases & Querying: Microsoft SQL Server 2008/2012/2014, Oracle, Teradata.

Datawarehouse: SSMS, Snowflake

Programming: Python

Visualization Tools: Power BI, Tableau

Data Management: Excel (Pivot Tables, VLOOKUP, Dashboards)

Project & Defect Management: Azure DevOps, JIRA, ALM

Testing & QA: Regression, Tosca and Postman

Other Tools: Google Sheets, MS Office

Education

Bachelor's in Computer Science & System Engineering – 2018 – Grade 7.3/10,
Sree Vidyanikethan Engineering College (JNTU-Anantapur affiliated)
Tirupati, India

Professional Experience

Client: CBUAE- Dubai, UAE

Jun 2022 – Nov 2022

Work Location: Accenture, Hyderabad, India

Data Analyst

Focused on gathering & documenting requirements from stake holders during data discovery phase of data migration / modernization project and analyzing customer online transactions data for performance tracking and decision support. The project involved using SQL for building data transformations from MS SQL to Snowflake Datawarehouse, prepared reports in Power BI, and supported business teams with insights to improve operational efficiency and customer understanding.

Responsibilities:

- Gathered and documented business and data requirements for large-scale data migration / modernization project from on-prem MS-SQL Server to Snowflake as Enterprise Datawarehouse , ensuring alignment with stakeholders and successful delivery.
- Collected, cleaned, and standardized the data, performing SQL-based extraction and analysis of customer, account, and transaction data to support accurate reporting and analytics.

- Built source-to-target mapping (STM) and data transformation documentation, defining data lineage, business rules, validation checks, and standardization techniques to ensure quality of data.
- Designed and optimized complex SQL queries—including JOINS, CTEs, window functions, and aggregations—for data analysis, validation, reporting, and insight generation.
- Prepared daily and monthly performance reports to support business and compliance teams. Created Power BI dashboards and charts to visualize key banking metrics such as Active / Inactive, scans, deposits, transfers, and splits etc.,
- Identified data errors and missing values, improving overall data quality and reliability while generating insights to support customer behavior and trend analysis.

Environment: MS SQL , Enterprise App, Snowflake, SQL, JIRA, Agile, Power BI, MS Excel.

Client: Corteva - San Diego, CA

Jan 2021 – Jun 2022

Work Location: Accenture, Hyderabad, India

Data Analyst

Conducted data analysis on agricultural data (crop production, soil quality, and pricing trends). Utilized SQL for data cleaning and aggregation in SSMS. Created a Power BI dashboard showcasing yield prediction and pricing patterns for farmers and suppliers.

Responsibilities:

- Collected and analyzed multi-year crop yield, soil quality, and weather datasets to identify factors impacting productivity and profitability. Built SQL pipelines to clean, aggregate, and standardize raw data from multiple sources (field trials, IoT sensors, and satellite imagery).
- Elicited, gathered, and documented business and data requirements including source-to-target mapping with SQL data transformation documentation, establishing data lineage, business rules, validation procedures, and standardization practices.
- Developed SQL queries—including JOINS, CTEs, window functions, and aggregations—to support data analysis, validation, reporting, and actionable business insights. Utilized Python (Pandas) for exploratory data analysis (EDA) and manipulated / massaged the data as required for visualization of seasonal crop performance. Designed Power BI dashboards to visualize KPIs such as average yield per region, fertilizer efficiency, and water usage patterns.
- Partnered with agronomists and field officers to translate analytical findings into actionable insights for farmers and stakeholders. Conducted market price trend analysis to forecast demand and pricing, helping improve procurement and distribution strategies and Implemented data validation and integrity checks to ensure consistency and reliability across large datasets.
- Developed data-driven reports highlighting opportunities to reduce costs and improve productivity, leading to 10–15% improvement in operational efficiency. Automated monthly data refreshes using SQL and Python, reducing manual reporting time by over 50%.

Environment: SSMS, MS SQL, Python, Power BI, Agile, Azure DevOps, MS Excel.

Amazon - Chennai, India

Sep 2018-Dec 2019

Data Quality Analyst

Analyzed large datasets to identify trends, KPIs, and performance metrics. Designed SQL queries for data extraction, validation, and reporting. Collaborated with cross-functional teams to develop dashboards and reports. Automated

recurring data tasks using Python scripts to improve efficiency. Presented insights and recommendations to stakeholders for strategic planning.

Responsibilities:

- Improved data reporting efficiency by 25% through SQL query optimization. Supported multiple business verticals with data-driven insights.
- Analyzed Amazon Fire Stick sales data to identify top-performing regions, customer segments, and seasonal trends. Used SQL for querying transactional data and Excel/Python for visualization. Delivered actionable insights that helped improve sales targeting strategy.
- Extracted and analyzed **more transactional records** from the database using **complex SQL queries** to uncover regional sales trends and customer preferences.
- Performed **data cleaning and transformation** in Python (Pandas, NumPy), improving data accuracy by **30%** for reporting purposes. Conducted **cohort and churn analysis** to identify repeat customer and retention factors, leading to a **15% increase in re-purchase rate** recommendations.
- Applied **A/B testing insights** to evaluate the impact of promotional campaigns on device sales. Developed **SQL stored procedures and CTEs** for automated weekly performance reports, reducing manual effort by **40%**.
- Collaborated with the marketing and product teams to **optimize pricing strategies** and content recommendations based on customer behavior analytics. Delivered **data-driven presentations** to senior stakeholders highlighting revenue trends, user engagement metrics, and product performance.
- Designed **interactive dashboards** in **Power BI** to visualize KPIs such as revenue growth, return rates, and customer engagement metrics.

Environment: Enterprise APP – Fire TV / Stick, SSMS , MS SQL, AWS, MS Excel, Agile.
