Projects:

- **DBMS Project:** Developed a DBMS CLI Menu-based Application using Bash Shell Scripting Language. The project mimics CRUD operations in SQL, which enables the user to handle the fundamental operations used in databases.
- **Cloud-Native Node.js Application Deployment & Monitoring:**
 - Containerized and deployed a Node.js application on AWS EC2 using Docker and Kubernetes.
 - Implemented Prometheus monitoring and built Grafana dashboards for real-time observability.
 - Configured Alertmanager to send alerts and notifications to Slack.
- **Enterprise-Grade Cloud DevOps Pipeline on AWS**
 - Reduced build time by 80% by implementing a Jenkins CI/CD pipeline with Dockerized builds and automated testing
 - Reduced infrastructure costs by using Kubernetes auto-scaling and optimized container resource allocation
 - Improved deployment reliability by 20% through GitOps with ArgoCD, eliminating environment drift and enabling automated rollback.
 - Enhanced observability by deploying Prometheus & Grafana for metrics and EFK & CloudWatch for centralized logging.
